Create A New Climate FOR ACTION

Do Your Part for Climate Change and Children's Health

EPA
United States
Environmental Protection
Agency

Join other teens in the U.S. Environmental Protection Agency's (EPA) campaign to create a new climate for action.

Children are vulnerable to certain environmental hazards, such as excessive heat, poor air quality, and flooding. Climate change could increase these hazards. But you can help.

Take action to slow the pace of climate change.

1. Use EPA's online calculator designed for teenagers to determine how much energy you use and the simple steps you can take to reduce your carbon footprint.
2. Download a free presentation to teach others about climate change and children's health.
3. Become a Climate Ambassador by motivating friends and family to reduce greenhouse gas emissions.

You *can* make a difference to the planet, children's health, and the future.
