No Facility Plot Plan.

We need to know the Plans for FIRE, POLICE and EMERGENCY SERVICES. Are Hospitals nearby and are there ambulances to transport injured persons there.

Are Hospitals, Emergency Rooms and Urgent Care Centers equipped for air contamination injuries from emissions or burns from fires or explosions.

How fast is the response time.

How are nearby schools being notified, equipped and protected.

Where are the monitoring stations and who is responsible for reporting and who is responsible for compliance.

Who determines an emergency air quality condition and how is that handled.

This is a private company on Open Space. Who is liable and how is the liability being insured and to what amount.

What communication is being set up regarding the monitoring and air contamination with emergency responders.

How does this project comply with the State Implementation Plan and the USEPA.
