

# Waste Disposal, Inc. (WDI) Superfund Site

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY REGION 9 • SAN FRANCISCO, CALIFORNIA • SEPTEMBER 2000

## UPDATE ON WASTE DISPOSAL, INC. SUPERFUND SITE

COMMUNITY FORUM PLANNED FOR WEDNESDAY, OCTOBER 18, 7:00 PM

The U.S. Environmental Protection Agency invites you to a presentation and community forum, Wednesday evening, October 18, 2000. This event will provide information on upcoming activities at the Waste Disposal, Inc., Superfund site. The City of Santa Fe Springs will present information about the recently awarded EPA Redevelopment Grant, and the Waste Disposal, Inc. Group (WDIG) will discuss their proposal to conduct a Waste Excavation Treatability Study. Representatives from both groups and the U.S. Environmental Protection Agency will be available to answer your questions. Details are provided in the box below.

### LIMITED SUBSURFACE SOIL INVESTIGATION ACTIVITIES PLANNED FOR EARLY OCTOBER

As stated in EPA's August 2000 fact sheet, the WDIG recently submitted a proposal to the EPA to conduct an excavation study at the site in Areas 1 and 8, where waste is buried next to or underneath buildings on parcels along Los Nietos and Santa Fe Springs Roads (see Figure 1). The purpose of this proposed study, called a Waste Excavation Treatability Study, is to determine how feasible it would be to excavate waste near or beneath buildings.

To prepare for the excavation study, the WDIG is planning to drill a limited number of additional soil borings in and around several buildings along Los Nietos Road and Santa Fe Springs Road. The data collected through this subsurface soil investigation would be used to prepare for the proposed excavation study, should EPA approve this project. Whether or not the waste excavation study is approved, WDIG and

EPA will use the subsurface soil boring data to further refine the overall Supplemental Feasibility Study that will lead to a final cleanup decision. EPA currently is reviewing the WDIG's soil boring workplan. EPA may approve the workplan by late September. If approved, the limited field work would begin in early to mid-October and take about two weeks to complete.
