Hi Sam,

Attached are EPA's comments on the 6 title V renewal permits for the Southern California Gas Company, which were submitted for EPA review on October 27, 2011. The facilities covered include:

Kelso Turbine/Compressor Station  
Adelanto Turbine/Compressor Station  
Newberry Springs Compressor Station  
Blythe Compressor Station  
South Needles Compressor Station  
North Needles Compressor Station

SCG Title V EPA Comments 12092011.docx

Those permits which will require a CAM submittal will need to be corrected and public noticed before final issuance of the title V permit. In this case, those permits that will not require CAM may incorporate the applicable requirements of the RICE NESHAP (40 CFR 63 Subpart ZZZZ) through a permit revision, as requested. However, in general, the title V permit should include all applicable requirements, including those with future compliance dates, at the time of permit issuance. Also for those permits that do not have CAM requirements - the additional minor comments in the attachment (those other than 1 and 2) may be incorporated prior to final issuance. If you have any questions about the comments, or would like to setup a time to talk about them, just let me know.

Thanks,
