Re: **Proposed Authority to Construct / Certificate of Conformity (Minor Mod)
District Facility # C-1555
Project # C-1093804**

Dear Mr. Rios:

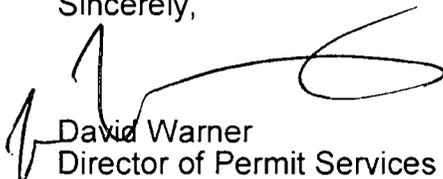

Enclosed for your review is the District's engineering evaluation of an application for Authority to Construct for J. G. Boswell Company, located at 710 Bainum Avenue in Corcoran, which has been issued a Title V permit. J. G. Boswell Company is requesting that a Certificate of Conformity, with the procedural requirements of 40 CFR Part 70, be issued with this project. The Authority to Construct permit authorizes the designation of a cotton lint removal operation (C-1555-3) as a compliant dormant emissions unit (DEU). The lint removal operation is part of a cotton seed oil extraction and refining plant.

Enclosed is the engineering evaluation of this application, a copy of the current Title V permit, and proposed Authority to Construct # C-1555-3-8 with Certificate of Conformity. After demonstrating compliance with the Authority to Construct, the conditions will be incorporated into the facility's Title V permit through an administrative amendment.

Please submit your written comments on this project within the 45-day comment period that begins on the date you receive this letter. If you have any questions, please contact Mr. Jim Swaney, Permit Services Manager, at (559) 230-5900.

Thank you for your cooperation in this matter.

Sincerely,

David Warner
Director of Permit Services

**Re: Proposed Authority to Construct / Certificate of Conformity (Minor Mod)
District Facility # C-1555
Project # C-1093804**

Dear Mr. Tristao:

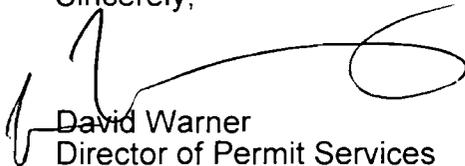

Enclosed for your review is the District's analysis of your application for Authority to Construct for the facility identified above. You have requested that a Certificate of Conformity with the procedural requirements of 40 CFR Part 70 be issued with this project. The Authority to Construct permit authorizes the designation of a cotton lint removal operation (C-1555-3) as a compliant dormant emissions unit (DEU). The lint removal operation is part of a cotton seed oil extraction and refining plant.

After addressing any EPA comments made during the 45-day comment period, the Authority to Construct will be issued to the facility with a Certificate of Conformity. Prior to operating with modifications authorized by the Authority to Construct, the facility must submit an application to modify the Title V permit as an administrative amendment, in accordance with District Rule 2520, Section 11.5.

If you have any questions, please contact Mr. Jim Swaney, Permit Services Manager, at (559) 230-5900.

Thank you for your cooperation in this matter.

Sincerely,

David Warner
Director of Permit Services

**San Joaquin Valley Air Pollution Control District
Authority to Construct
Application Review
Dormant Cotton Lint Removal Operation**

Facility Name:	J.G. Boswell Company	Date:	February 3, 2010
Mailing Address:	PO Box 457 Corcoran, CA 93212-0457	Engineer:	Brian Clerico
Contact Person:	Dennis Tristao	Lead Engineer:	Sheraz Gill
Telephone:	(559) 992-2141		
Application #(s):	C-1555-3-8		
Project #s:	C-1093804		
Deemed Complete:	October 24, 2009		

I. Proposal

J. G. Boswell Company has applied for an Authority to Construct permit to designate a cotton lint removal operation (C-1555-3) as a compliant dormant emissions unit (DEU). The cotton lint removal operation is part of a cotton seed oil extraction and refining plant.

Since the lint removal operation is not subject to District Rule 4204 (see Rule 4204 discussion below), the purpose of making the lint removal operation dormant is to allow the operator to postpone the periodic cyclone source test requirement until recommencing operation.

J. G. Boswell Company received their Title V Permit on May 1, 1998. This modification can be classified as a Title V minor modification pursuant to Rule 2520, Section 3.20, and can be processed with a Certificate of Conformity (COC). Since the facility has specifically requested that this project be processed in that manner, the 45-day EPA comment period will be satisfied prior to the issuance of the Authority to Construct. J. G. Boswell Company must apply to administratively amend their Title V Operating Permit to include the requirements of the ATC issued with this project.

II. Applicable Rules

Rule 2201	New and Modified Stationary Source Review Rule (9/21/06)
Rule 2520	Federally Mandated Operating Permits (6/21/01)
Rule 4101	Visible Emissions (2/17/05)
Rule 4102	Nuisance (12/17/92)
Rule 4201	Particulate Matter Concentration (12/17/92)
Rule 4202	Particulate Matter Emission Rate (12/17/92)
Rule 4204	Cotton Gins (2/17/05)
CH&SC 41700	Health Risk Assessment

CH&SC 42301.6 School Notice

Public Resources Code 21000-21177: California Environmental Quality Act (CEQA)

California Code of Regulations, Title 14, Division 6, Chapter 3, Sections 15000-15387: CEQA Guidelines

III. Project Location

This facility is located at 710 Bainum Avenue, in Corcoran. Since there is no increase in hazardous air emissions, the public notification requirement of California Health and Safety Code 42301.6 is not applicable to this project.

IV. Process Description

The lint removal operation receives upland cotton seed and processes it through gin-like machines that remove any remaining lint from the seed. The lint is then sent to a baler and the seeds can then be processed through the decortication plant (C-1555-2).

V. Equipment Listing

Pre-Project Equipment Description:

C-1555-3-5: 2,940 HP LINT REMOVAL PROCESS INCLUDING 2 (1D-2D) CYCLONE CLEANER/RECLAIMER, 19 (2D-2D) CYCLONE LINTERS, HULL BEATERS AND RECLAIMERS, AND 13 (1D-3D) CYCLONE CLEANERS/COLLECTORS

Proposed Modification:

C-1555-3-8: DESIGNATE ALL THE EMISSIONS UNITS COMPRISING THE LINT REMOVAL PROCESS AS DORMANT EMISSIONS UNITS (DEU'S)

Post-Project Equipment Description:

C-1555-3-8: A COMPLIANT DORMANT LINT REMOVAL PROCESS INCLUDING 2 (1D-2D) CYCLONE CLEANER/RECLAIMER, 19 (2D-2D) CYCLONE LINTERS, HULL BEATERS AND RECLAIMERS, AND 13 (1D-3D) CYCLONE CLEANERS/COLLECTORS

VI. Emission Control Technology Evaluation

There are no new or replacement cyclones being proposed in this project.

VII. General Calculations

Rule 2201 calculations are only required for units subject to Rule 2201. Per Rule 2201, Section 3.25, a unit is subject to Rule 2201 if it involves at least one of the following:

3.25.1.1 - Any change in hours of operation, production rate, or method of operation of an existing emissions unit, which would necessitate a change in permit conditions.

3.25.1.2 - Any structural change or addition to an existing emissions unit which would necessitate a change in permit conditions. Routine replacement shall not be considered to be a structural change.

3.25.1.3 - An increase in emissions from an emissions unit caused by a modification of the Stationary Source when the emissions unit is not subject to a daily emissions limitation.

3.25.1.4 - Addition of any new emissions unit which is subject to District permitting requirements.

3.25.1.5 - A change in a permit term or condition proposed by an applicant to obtain an exemption from an applicable requirement to which the source would otherwise be subject.

Designating all the gin's systems dormant emissions units does not involve any of the above items; therefore, this modification is not subject to Rule 2201, and, therefore, formal calculations for Rule 2201 are not required.

The PAS emission profile for current PTO C-1555-3-5 is incomplete. The best and most recent estimate of the potential to emit for C-1555-3 is a calculation performed in project C-1031130, which will be entered into the PAS emissions profile for ATC C-1555-3-8.

VIII. Compliance

This unit is currently in compliance with all applicable District rules. The applicant has requested the flexibility to dismantle cyclones and other equipment while the unit remains dormant. With this request in mind and per District Policy SSP 1705, Additional Permit Conditions for Dormant Emissions Units, the following conditions will be included on ATC C-1555-3-8:

- Repairs and maintenance including dismantling of equipment is authorized under this permit while this unit remains dormant. For any permanent changes or modifications to C-1555-3, the operator shall file for and receive an Authority to Construct permit authorizing such changes or modifications prior to recommencing operation. [District Rule 2010]
- All machines/systems belonging to the lint removal process (C-1555-3) shall be physically disconnected from their power source or rendered non-operational. [District Rule 2010]
- Provided that no permanent changes that might otherwise require ATC approval have taken place, the operator shall notify the District at least seven (7) calendar days prior to recommencing operation of this dormant emissions unit (DEU), at which time this permit will be administratively modified to remove DEU references. [District Rule 2010]

In addition, the phrase "Upon recommencing operation," will be added to all current monitoring and operating conditions on the permit.

Finally, the existing source test condition contains language that appears to have been carried over from an ATC, and, in any event, is obsolete.

- ~~Within 6 months of the issuance of this permit~~, the owner/operator shall perform CARB Method 5 to determine the PM emission rate. The source test will be conducted on one representative cyclone for the process. Additional source testing shall be performed at least once every five years. [District Rule 2520, 9.3.2]

The source test condition was thus rewritten as follows to conform to District Policy SSP 1705 and to eliminate the phrase "Within 6 months of the issuance of this permit."

- A source test to demonstrate compliance with the particulate matter (PM) emission rate limit (0.1 grains/dscf) on this permit shall be performed within 60 days of recommencing operation of this unit unless such a test has been completed within the previous five years. The owner/operator shall measure the PM emission rate from one representative cyclone using CARB Method 5. [District Rule 2520, 9.3.2]

Rule 2201 New and Modified Stationary Source Review Rule

As noted above, this project is not subject to Rule 2201.

Rule 2520 Federally Mandated Operating Permits

This facility is subject to this Rule, and has received their Title V Operating Permit. The proposed modification is a Minor Modification to the Title V Permit pursuant to Section 3.20 of this rule:

In accordance with Rule 2520, 3.20, these modifications:

1. Do not violate requirements of any applicable federally enforceable local or federal requirement;
2. Do not relax monitoring, reporting, or recordkeeping requirements in the permit and are not significant changes in existing monitoring permit terms or conditions;
3. Do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;
4. Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement and that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject. Such terms and conditions include:
 - a. A federally enforceable emission cap assumed to avoid classification as a modification under any provisions of Title I of the Federal Clean Air Act; and
 - b. An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the Federal Clean Air Act; and
5. Are not Title I modifications as defined in District Rule 2520 or modifications as defined in section 111 or 112 of the Federal Clean Air Act; and
6. Do not seek to consolidate overlapping applicable requirements.

As discussed above, the facility has applied for a Certificate of Conformity (COC); therefore, the facility must apply to modify their Title V permit with an administrative amendment prior to operating with the proposed modifications. Continued compliance with this rule is expected.

The facility may construct/operate under the ATC upon submittal of the Title V administrative amendment application.

Rule 4101 Visible Emissions

Section 5.0 prohibits visible emissions for a period of more than three minutes per hour that are darker than 20% or Ringelmann No. 1. Based on past inspections of similar cotton ginning facilities, emissions are not expected to exceed allowable limits when controlled by cyclones. Compliance with this rule is expected.

The following condition will continue to appear on the facility-wide permit C-1555-0-2, condition #22:

- No air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark as, or darker than, Ringelmann 1 or 20% opacity. [District Rule 4101]

Rule 4102 Nuisance

Section 4.0 prohibits discharge of air contaminants, which could cause injury, detriment, nuisance or annoyance to the public. As a dormant emissions unit, the cotton gin is not expected to be a potential public nuisance; therefore, continued compliance is expected.

The following permit condition will continue to appear on the facility-wide permit C-1555-0-2, condition #43:

- {98} No air contaminant shall be released into the atmosphere, which causes a public nuisance. [District Rule 4102]

California Health & Safety Code 41700 (Health Risk Assessment)

District Policy APR 1905 - Risk Management Policy for Permitting New and Modified Sources specifies that for an increase in emissions associated with a proposed new source or modification, the District perform an analysis to determine the possible impact to the nearest resident or worksite.

Since the applicant is not proposing an increase in emissions with this project, a health risk assessment is not necessary, and no further risk analysis is required.

Rule 4201 Particulate Matter Concentration

According to Section 3.1 particulate matter (PM) emissions from each source operation should not exceed 0.1 grains per cubic foot of gas at dry standard conditions. Since all the systems of the cotton gin will be dormant, no PM will be emitted from the gin, and no quantification of potential PM emissions is necessary.

The following condition will continue to appear on ATC C-1555-3-8:

- Upon recommencing operation, particulate matter emissions shall not exceed 0.1 grains/dscf in concentration. [District Rule 4201]

Rule 4202 Particulate Matter Emission Rate

This rule establishes a maximum allowable particulate emission rate (E) at each *source operation* (i.e., each system for the lint removal operation) for given a maximum process rate. Since all the systems of the lint removal operation will be dormant, no PM will be emitted from the lint removal operation, and no quantification of potential PM emissions is necessary.

Rule 4204 Cotton Gins

The purpose of this rule is to limit PM10 emissions from cotton ginning facilities and to provide the administrative requirements for monitoring, recordkeeping, and source testing for these facilities.

The provisions of this rule apply to all cotton ginning facilities within the District.

Per the definition in Section 3.7, a cotton ginning facility is a facility whose primary function is to separate lint cotton from the cottonseed.

Since the primary function of this facility is to extract and refine oil from cotton seeds, this facility does not qualify as a cotton gin according to the definition in the rule. The District has previously made this determination by assigning this facility (C-1555) a different facility ID and SIC code from the cotton gin that is also located at this same address (C-678).

California Health & Safety Code 42301.6 (School Notice)

There is no increase in emissions of any hazardous air pollutants as a result of this project. Therefore, the public notification requirement of California Health and Safety Code 42301.6 is not applicable to this project.

District CEQA Findings

The California Environmental Quality Act (CEQA) requires each public agency to adopt objectives, criteria, and specific procedures consistent with CEQA Statutes and the CEQA Guidelines for administering its responsibilities under CEQA, including the orderly evaluation of projects and preparation of environmental documents. The San Joaquin Valley Unified Air Pollution Control District (District) adopted its *Environmental Review Guidelines* (ERG) in 2001. The basic purposes of CEQA are to:

- Inform governmental decision-makers and the public about the potential, significant environmental effects of proposed activities.
- Identify the ways that environmental damage can be avoided or significantly reduced.
- Prevent significant, avoidable damage to the environment by requiring changes in projects through the use of alternatives or mitigation measures when the governmental agency finds the changes to be feasible.

- Disclose to the public the reasons why a governmental agency approved the project in the manner the agency chose if significant environmental effects are involved.

The District performed an Engineering Evaluation (this document) for the proposed project and determined that the activity will occur at an existing facility and the project involves negligible expansion of the existing use. Furthermore, the District determined that the activity will not have a significant effect on the environment. The District finds that the activity is categorically exempt from the provisions of CEQA pursuant to CEQA Guideline § 15031 (Existing Facilities), and finds that the project is exempt per the general rule that CEQA applies only to projects which have the potential for causing a significant effect on the environment (CEQA Guidelines §15061(b)(3)).

IX. Recommendation

Compliance with all applicable rules and regulations is expected. Issue ATC C-1555-3-8 subject to the permit conditions on the attached draft ATC in Appendix B.

X. Billing Information

There is no change in equipment ratings. Therefore, the fee schedule will remain the same.

Annual Permit Fees			
Permit Number	Fee Schedule	Fee Description	Annual Fee

PERMIT UNIT: C-1555-3-5

EXPIRATION DATE: 11/30/2007

EQUIPMENT DESCRIPTION:

2,940 HP LINT REMOVAL PROCESS INCLUDING 2 (1D-2D) CYCLONE CLEANER/RECLAIMER, 19 (2D-2D) CYCLONE LINTERS, HULL BEATERS AND RECLAIMERS, AND 13 (1D-3D) CYCLONE CLEANERS/COLLECTORS.

PERMIT UNIT REQUIREMENTS

1. Particulate matter emissions shall not exceed 0.1 grains/dscf in concentration. [District Rule 4201] Federally Enforceable Through Title V Permit
2. Material removed from dust collector(s) shall be disposed of in a manner preventing entrainment into the atmosphere. [District Rule 4201] Federally Enforceable Through Title V Permit
3. All equipment shall be maintained in good operating condition and shall be operated in a manner to minimize emissions of air contaminants into the atmosphere. [District Rule 4102]
4. Compliance with the above conditions shall be considered compliance with District Rule 4201 (12/17/92). Therefore, a permit shield is granted from this requirement. [District Rule 2520, 13.2] Federally Enforceable Through Title V Permit
5. Dust collectors shall be inspected at least once every week while in operation for any cracks, holes, or malfunctions which might decrease the PM collection efficiency, and shall be repaired or replaced as needed. [District Rule 2520, 9.3.2] Federally Enforceable Through Title V Permit
6. Records of dust collector inspection, maintenance, and repair shall be maintained. These records shall include identification of the dust collector, date of inspection, any corrective action taken as a result of inspection, and initials of the personnel performing the inspection. [District Rule 2520, 9.3.2] Federally Enforceable Through Title V Permit
7. The particulate matter emissions shall comply with District Rule 4202, section 4.0 (12/17/92). [District Rule 4202] Federally Enforceable Through Title V Permit
8. Records shall be maintained on the daily hours of operation. [District Rule 2520, 9.3.2] Federally Enforceable Through Title V Permit
9. Within 6 months of the issuance of this permit, the owner/operator shall perform CARB Method 5 to determine the PM emission rate. The source test will be conducted on one representative cyclone for the process. Additional source testing shall be performed at least once every five years. [District Rule 2520, 9.3.2] Federally Enforceable Through Title V Permit

These terms and conditions are part of the Facility-wide Permit to Operate.
