VII. REQUIREMENTS NOT FEDERALLY ENFORCEABLE

For each Title V source, the District issues a single permit that contains the Federally Enforceable requirements, as well as the District-only requirements. The District-only requirements are not a part of the Title V Operating Permits. The terms and conditions that are part of the facility's Title V permit are designated as "Federally Enforceable Through Title V Permit".

For this facility, the following are not federally enforceable and will not be discussed in further detail:

A. Rules Not Updated

- District Rule 4102, Nuisance (as amended December 17, 1992)

Condition 39 of the facility-wide requirements is based on District Rule 4102 and will therefore not be discussed any further.

B. Rules Added

- District Rule 4320, Advanced Emission Reduction Options For Boilers, Steam Generators, and Process Heaters Greater Than 5.0 MMBtu/hr, (adopted October 16, 2008)

The purpose of this rule is to limit emissions of oxides of nitrogen (NO_x), carbon monoxide (CO), oxides of sulfur (SO₂), and particulate matter 10 microns or less (PM₁₀) from boilers, steam generators, and process heaters.

The rule was adopted on October 16, 2008 and has not yet been approved into the State Implementation Plan (SIP). In addition, the deadline to meet compliance with the requirements of this rule has not yet passed. Therefore, the boiler in this project is not currently subject to the requirements of this rule, and the requirements of this rule will not be addressed in this evaluation.

VIII. PERMIT REQUIREMENTS

The purpose of this evaluation is to review changes to federally enforceable requirements; therefore, this compliance section will only address rules that have been amended or added since the issuance of the initial Title V permit.

A. District Rule 2020 - Exemptions

District Rule 2020 lists equipment which are specifically exempt from obtaining permits and specifies recordkeeping requirements to verify such exemptions. The amendments to this rule do not have any affect on current permit requirements and will therefore not be addressed in this evaluation.

B. District Rule 2201 - New and Modified Stationary Source Review Rule

District Rule 2201 has been amended since this facility's initial Title V permit was issued. This Title V permit renewal does not constitute a modification per section 3.26, defined as an action including at least one of the following items:

- 1) Any change in hours of operation, production rate, or method of operation of an existing emissions unit, which would necessitate a change in permit conditions.
- 2) Any structural change or addition to an existing emissions unit which would necessitate a change in permit conditions. Routine replacement shall not be considered to be a structural change.
- 3) An increase in emissions from an emissions unit caused by a modification of the Stationary Source when the emissions unit is not subject to a daily emissions limitation.
- 4) Addition of any new emissions unit which is subject to District permitting requirements.
- 5) A change in a permit term or condition proposed by an applicant to obtain an exemption from an applicable requirement to which the source would otherwise be subject.

Therefore, the updated requirements of this rule are not applicable at this time.

C. District Rule 4101 - Architectural Coatings

a. S-2076-0-3 – Facility-Wide Requirements

The latest version of District Rule 4601 has not been SIP approved. Attachment D contains the streamlining of the SIP approved District Rule 4601 (10/31/01) to the current District Rule 4601 to show the current rule is as stringent if not more than the SIP approved version. Conditions 23 through 25 on the facility-wide permit (S-2076-0-3) demonstrate compliance with the requirements of the latest version of this rule.

D. District Rule 4306 Boilers, Steam Generators, Process Heaters - Phase 3

a. Permit Unit S-2076-1-14

Rule 4306 was modified to address an EPA concern regarding the exemption from BACT and offset exemption to include provisions of start-up or shutdown in the Permit to Operate (PTO). The modified provision includes a statement that modification of PTO may qualify for exemption from BACT and offset provided it meets the criteria specified in Rule 2201 (New and Modified Stationary Source Review Rule), Section 4.4 (BACT Exemption) and Section 4.6 (Offset Exemption). US EPA commented it is not appropriate to include such an exemption from new source review (NSR) requirements and it would not be approvable for inclusion in the State Implementation Plan (SIP). US EPA also stated "any regulatory language that exempts sources from NSR is subject to review as a revision to the District's NSR program. Adding a specific NSR exemption or new terms to provide an exemption already provided for in Rule 2201 to any rule not previously evaluated by EPA would likely open up all of the existing NSR rules to a new review to ensure compliance with the requirements of 40 CFR 51.165(a)(1).

The amendments to this rule do not have any affect on current permit requirements and will therefore not be addressed in this evaluation.

E. District Rule 4703 – Stationary Gas Turbines

a. Permit unit S-2076-9-10

Section 5.1.3 was added to impose new NOx emission limits for units no greater than 10 MW.

The new NOx limits are listed in the following table.

Tier 3 NOx Compliance Limits

Turbine Classification Rating	NOx Compliance Limit, ppmvd at 15% O ₂	
	Gas Fuel	Liquid Fuel
a) Less than 3 MW.	9	25
b) 3 MW to 10 MW pipeline gas turbine.	8 during steady state and 12 during non-steady state	25
c) 3 MW to 10 MW and permit condition for less than 877 hrs/yr operation.	9	25
d) 3 MW to 10 MW and permit condition for 877 hrs/yr operation or greater.	5	25
e) Greater than 10 MW, Simple cycle, and permit condition for no greater than 200 hrs/yr operation, except as provided in Section 5.1.3.3.	25	42
f) Greater than 10 MW, Simple cycle, and permit condition for greater than 200 hrs/yr operation but no greater than 877 hrs/yr operation.	5	25

Section 7.3.1 through Section 7.3.3 specify the compliance schedule for the units subject to Tier 3 Compliance Limits

The ECP submitted with the District includes the plan elements required in Section 6.1 and the compliance date required in Section 7.3. The ECP states that the turbine will be equipped with either Cheng Low NOx (CLN) technology or selective catalytic reduction (SCR) to comply with the emission limits of District Rule 4703 required by the earlier of October 1, 2011, or within 90 days following the next Major Overhaul on or after July 1, 2009.

The amendments to this rule do not have any affect on current permit requirements until October 1, 2011.

In addition, the District removed the term Thermal Stabilization Period in September 20, 2007 amendment, replacing it with "Transitional Operation Period" and defining it as: any of the following periods: bypass transition period, primary re-ignition period, reduced load period, start-up or shutdown. The District has made changes as following.

3. ~~The owner or operator shall not operate the gas turbine under load conditions, excluding the thermal stabilization or reduced load period transitional operation period as defined in District Rule 4703 (as amended September 20, 2007), which results in the measured NOx emissions concentration exceeding 35 ppmv @ 15% O2. [40 CFR 60.332(a)(1), (a)(2) and District Rule 4703, 5.1.2.1] Federally Enforceable Through Title V Permit~~

4. ~~The owner or operator shall not operate the gas turbine under load conditions, excluding the thermal stabilization or reduced load period transitional operation period as defined in District Rule 4703 (as amended September 20, 2007), which results in the measured CO emissions concentration exceeding 200 ppmv @ 15% O2. [District Rule 4703, 5.2] Federally Enforceable Through Title V Permit~~

~~Reduced Load Period shall be defined as the time during which a gas turbine is operated at less than rated capacity in order to change the position of the exhaust gas diverter gate not exceeding one hour. [District Rule 4703, 3.19] Federally Enforceable Through Title V Permit~~

~~Thermal Stabilization Period shall be defined as the start up or shut down time during which the exhaust gas is not within the normal operating temperature range, not to exceed two hours [District Rule 4703, 3.25] Federally Enforceable Through Title V Permit~~

F. 40 CFR Part 64-CAM

40 CFR Part 64 requires Compliance Assurance Monitoring (CAM) for units that meet the following three criteria:

- 1) the unit must have an emission limit for the pollutant;
- 2) the unit must have add-on controls for the pollutant; these are devices such as flue gas recirculation (FGR), baghouses, and catalytic oxidizers; and
- 3) the unit must have a pre-control potential to emit of greater than the major source thresholds.

a. S-2076-1-14 – 72 MMBtu/hr Natural Gas/LPG fired Boiler

The boiler has add-on controls only for NOx in the form of FGR. The boiler is equipped with ultra low NOx burners which are guaranteed to have NOx emissions of 15 ppmv @ 3% O2 or 0.018 lb/MMBtu. Therefore uncontrolled NOx emissions from 72 MMBtu/hr unit is calculated as shown below.

$$0.018 \text{ lb/MMBtu} \times 72 \text{ MMBtu/hr} \times 8,760 \text{ hrs/year} = 11,353 \text{ lb/year}$$

Therefore CAM is not applicable for NOx. Major source threshold for NOx is 50,000 lb/yr year.

There are no add-on controls for any other pollutant.

b. S-2076-2-8 – Potato Chip Line #1

Unit S-2076-2 may be subject to CAM for PM10, as there is a PM10 limit, and it does have add-on controls in the form of a scrubber. However, as shown below, the pre-control potential to emit is not greater than the major source threshold of 140,000 pounds PM10/year.

Uncontrolled emission factor for PM10 for “potato chips” is $(1.6 + 0.39 = 1.99)$ lb/ton (AP-42, 9.13.3-5, January 1995). The maximum throughput for this unit is 168,000 lb-chips/day.

$168,000 \text{ lb/day} \times 1 \text{ ton}/2000 \text{ lb} \times 1.99 \text{ lb/ton} \times 365 \text{ days/yr} = 61,013 \text{ lbs PM10/yr}$

c. S-2076-3-8 and '8-10 – Corn Chip Production Line #1 and #2

Units S-2076-3 and '8 may be subject to CAM for PM10, as there is a PM10 limit, and they do have add-on controls in the form of mist separators. However, as shown below, the pre-control potential to emit is not greater than the major source threshold of 140,000 pounds PM10/year.

Uncontrolled emission factor for PM10 for “other snack chips” is $(0.56 + 0.24 = 0.8)$ lb/ton (AP-42, 9.13.3-5, January 1995). The maximum throughput for each unit is 2,500 lb-chips/hr.

$2,500 \text{ lb/hr} \times 1 \text{ ton}/2000 \text{ lb} \times 0.8 \text{ lb/ton} \times 8,760 \text{ hr/yr} = 8,760 \text{ lbs PM10/yr}$

d. S-2076-4-7 and '5-7 – Tortilla Chip Line #1 and #2

Units S-2076-4 and '5 are not subject to CAM because they do not have any add-on controls.

e. S-2076-6-7 – Corn Receiving and Storage Operation

Unit S-2076-6 may be subject to CAM for PM10, as there is a PM10 limit, and it does have add-on controls in the form of a fabric filter. However, as shown below, the pre-control potential to emit is not greater than the major source threshold of 140,000 pounds PM10/year.

Uncontrolled emission factor for PM10 for "grain receiving - railcar" is 0.0078 lb/ton (AP-42, 9.9.1-22, March 2003). The maximum throughput for this unit is 6 tons/hr.

$$6 \text{ tons/hr} \times 0.0078 \text{ lb/ton} \times 8,760 \text{ hr/yr} = 410 \text{ lbs PM}_{10}/\text{yr}$$

f. S-2076-7-5 – Process Wastewater Treatment Facility

Unit S-2076-7 is not subject to CAM, since it does not have emission limits for VOC (the only pollutant which would be emitted from this permit).

g. S-2076-9-10 – Cogeneration Facility

Unit S-2076-9 may be subject to CAM for NO_x, as there is a NO_x limit, and it does have add-on controls in the form of steam injection.

This gas turbine qualifies for the exemption in 40 CFR 64.2(b)(i) for NO_x. This exemption is from CAM requirements pertaining to emission limits contained in NSPSs that were proposed prior to November 30, 2000. The EPA included this exemption with the reasoning that newer regulations will include adequate monitoring and thus the CAM Rule would be redundant. The gas turbine is subject to the Stationary Gas Turbine NSPS (Subpart GG), which was amended on July 8, 2004.

There are no add-on controls for any other pollutant.

h. S-2076-10-5 – Starch Drying Operation

Unit S-2076-10 may be subject to CAM for PM10, as there is a PM10 limit, and it does have add-on controls in the form of a cyclone. However, as shown below, the pre-control potential to emit is not greater than the major source threshold of 140,000 pounds PM10/year.

Per EPA "Air Pollution Control Technology Fact Sheet", a typical cyclone has a control efficiency of 30-90% for PM10. Assume a worst case control efficiency of 30%.

$$0.7 \text{ lb/hr} \times 8,760 \text{ hr/yr} \div 0.3 = 20,440 \text{ lbs PM}_{10}/\text{yr}$$

i. S-2076-11-6 and '12-6 – 240 hp Diesel Engine Powering Firewater Pump

Units S-2076-11 and '12 are not subject to CAM because they do not have any add-on controls.

j. S-2076-15-4 – Corn Receiving and Storage Operation

Unit S-2076-15 may be subject to CAM for PM10, as there is a PM10 limit, and it does have add-on controls in the form of a fabric filter. However, as shown below, the pre-control potential to emit is not greater than the major source threshold of 140,000 pounds PM10/year.

Uncontrolled emission factor for PM10 for “grain receiving - railcar” is 0.0078 lb/ton (AP-42, 9.9.1-22, March 2003). The maximum throughput for this unit is 100,000 lb/hr.

$$100,000 \text{ lb/hr} \times 1 \text{ ton}/2000 \text{ lb} \times 0.0078 \text{ lb/ton} \times 8,760 \text{ hr/yr} = 3,416 \text{ lbs PM10/yr}$$

k. S-2076-16-4 – Flour Receiving and Storage Operation

Unit S-2076-16 may be subject to CAM for PM10, as there is a PM10 limit, and it does have add-on controls in the form of a fabric filter. However, as shown below, the pre-control potential to emit is not greater than the major source threshold of 140,000 pounds PM10/year.

Uncontrolled emission factor for PM10 for “grain receiving – straight truck” is 0.059 lb/ton (AP-42, 9.9.1-22, March 2003). The maximum throughput for this unit is 35,000 lb/hr.

$$35,000 \text{ lb/hr} \times 1 \text{ ton}/2000 \text{ lb} \times 0.059 \text{ lb/ton} \times 8,760 \text{ hr/yr} = 9,045 \text{ lbs PM10/yr}$$

l. S-2076-17-6 – Baked Line #1

Unit S-2076-17 may be subject to CAM for PM10, as there is a PM10 limit, and it does have add-on controls in the form of a mist eliminator. However, as shown below, the pre-control potential to emit is not greater than the major source threshold of 140,000 pounds PM10/year.

Per project S-1000994, the mist eliminator has a control efficiency of 0.5. Unit S-2076-17 has a PM10 emission limit of 0.40 lb/hr from the fryer served by the mist eliminator. Therefore, the uncontrolled emissions are as follows.

$$0.40 \text{ lb/hr} \times 8760 \text{ hr/yr} \div 0.5 = 7,008 \text{ lbs PM10/yr}$$

m. S-2076-18-54 – Baked Line #2

Unit S-2076-18 is not subject to CAM because it does not have any add-on controls.

n. S-2076-19-13 – Pretzel Line #2

Units S-2076-19 may be subject to CAM for PM10, as there is a PM10 limit, and they do have add-on controls in the form of a cyclone and baghouse for the coater/drying oven in unit '19. However, as shown below, the pre-control potential to emit is not greater than the major source threshold of 140,000 pounds PM10/year.

Per EPA "Air Pollution Control Technology Fact Sheet", a typical cyclone has a control efficiency of 30-90% for PM10. Assume a worst case control efficiency of 30%.

$$7.8 \text{ lb/day} \times 365 \text{ days/yr} \div 0.3 = 9,490 \text{ lbs PM10/yr}$$

The baghouse would control these emissions even further.

o. S-2076-20-10 – Pretzel Line #1

Units S-2076-20 may be subject to CAM for PM10, as there is a PM10 limit, and it does have add-on controls in the form of a dust collection system which serves units '19 and '20. However, as shown below, the pre-control potential to emit is not greater than the major source threshold of 140,000 pounds PM10/year.

Per EPA "Air Pollution Control Technology Fact Sheet", a typical baghouse has a control efficiency of 95-99.9% for PM10. Assume a worst case control efficiency of 95%.

$$1.5 \text{ lb/day} \times 365 \text{ days/yr} \div 0.95 = 576 \text{ lbs PM10/yr}$$

p. S-2076-21-12 – Tortilla Chip Line

Units S-2076-21 may be subject to CAM for PM10, as there is a PM10 limit, and it does have add-on controls in the form of a mist eliminator. However, as shown below, the pre-control potential to emit is not greater than the major source threshold of 140,000 pounds PM10/year.

The mist eliminator has a minimum control efficiency of 0.5 (per permit condition). Unit S-2076-21 has a PM10 emission limit of 13.4 lb/hr. Therefore, the uncontrolled emissions are as follows.

$$13.4 \text{ lb/day} \times 365 \text{ days/yr} \div 0.5 = 9,782 \text{ lbs PM10/yr}$$

Current District Rule SIP Comparison

Stringency Comparison of District Rule 4601 Non-SIP Version (12/17/09) to Current SIP Version (10/31/01)

Requirement Category	SIP Version of Rule 4601 (10/31/01)	Non-SIP Version of Rule 4601 (12/17/09)	Conclusion
2.0 Applicability	This rule is applicable to any person who supplies, sells, offers for sale, applies, or solicits the application of any architectural coating, or who manufactures any architectural coating for use within the District.	This rule is applicable to any person who supplies, sells, offers for sale, applies, or solicits the application of any architectural coating, or who manufactures, blends or repackages any architectural coating for use within the District.	No change in the applicability, therefore, non-SIP version of rule is as stringent as SIP version.
4.0 Exemptions	<p>The provisions of this rule shall not apply to:</p> <p>4.1 Any architectural coating that is sold or manufactured for use outside of the District or for shipment to other manufacturers for reformulation or repackaging.</p> <p>4.2 Any architectural coating that is sold in a containers with a volume of one liter (1.057 quarts) or less.</p> <p>4.3 Any aerosol coating product.</p>	<p>4.1 The provisions of this rule shall not apply to:</p> <p>4.1.1 Any architectural coating that is supplied, sold, offered for sale, or manufactured for use outside of the District or for shipment to other manufacturers for reformulation or repackaging.</p> <p>4.1.2 Any aerosol coating product.</p> <p>4.2 With the exception of Section 6.2, the provisions of this rule shall not apply to any architectural coating that is sold in a container with a volume of one liter (1.057 quarts) or less.</p>	The only change is to require reporting requirements as discussed in Section 6.2 of the non-SIP approved version. Therefore, the non-SIP version of the rule is more stringent than the SIP version of the rule.
5.0 Requirements	Note: Section 5.0 requirements refer to Table of Standards, Table of Standards 1, and Table of Standards 2. These tables are included as Attachment X.		
	<p>5.1 VOC Content Limits: Except as provided in Sections 5.2, 5.3, 5.8 and 8.0, no person shall;</p> <p>5.1.1 manufacture, blend, or repack for sale within the District;</p> <p>5.1.2 supply, sell, or offer for sale within the district;</p> <p>5.1.3 solicit for application or apply within the District any architectural coating with a VOC content in excess of the corresponding limit specified in the Table of Standards, after the specified effective date in the Table of Standards.</p>	<p>5.1 VOC Content Limits: Except as provided in Sections 5.2 and 5.3, no person shall: manufacture, blend, or repack for use within the District; or supply, sell, or offer for sale within the District; or solicit for application or apply within the District any architectural coating with a VOC content in excess of the corresponding limit specified in the Table of Standards 1 or the Table of Standards 2, after the specified effective date in the Table of Standards 1 or the Table of Standards 2. Limits are expressed as VOC Regulatory, thinned to the manufacturer's maximum thinning recommendation, excluding any colorant added to tint bases.</p>	Sections 5.8 and 8.0 of the SIP version are not included in the non-SIP version. As discussed in corresponding sections the non-SIP version is more stringent. The Table of Standards and Table of Standards 1 have the same VOC limits. Table of Standard 2 is more stringent as discussed below. Therefore, the non-SIP version of the rule is more stringent than the SIP version of the rule.
	<p>5.2 Most Restrictive VOC Limit: If anywhere on the container of any architectural coating, or any label or sticker affixed to the container, or in any sales, advertising, or technical literature supplied by a manufacturer or anyone acting on their behalf, any representation is made that indicates that the coating meets the definition of or is recommended for use for more than one of the coating categories listed in the Table of Standards, then the most restrictive VOC content limit shall apply. This provision does not apply to the following coating categories:</p> <p>5.2.1 Lacquer coatings (including lacquer sanding sealers)</p> <p>5.2.2 Metallic pigmented coatings</p> <p>5.2.3 Shellacs</p> <p>5.2.4 Fire-retardant coatings</p> <p>5.2.5 Pretreatment wash primers</p> <p>5.2.6 Industrial maintenance coatings</p> <p>5.2.7 Low-solids coatings</p>	<p>5.2 Most Restrictive VOC Limit: If a coating meets the definition in Section 3.0 for one or more specialty coating categories listed in the Table of Standards 1 or the Table of Standards 2, then that coating is not required to meet the VOC limits for Flat, Nonflat, or Nonflat – High Gloss coatings, but is required to meet the VOC limit for the applicable specialty coating listed in the Table of Standards 1 or the Table of Standards 2.</p> <p>5.2.1 Effective until December 31, 2010, with the exception of the specialty coating categories specified in Section 5.2.3.1 through 5.2.3.15, if a coating is recommended for use in more than one of the specialty coating categories listed in the Table of Standards 1, the most restrictive (or lowest) VOC content limit shall apply.</p> <p>5.2.2 Effective on and after January 1, 2011, with the exception of the</p>	The VOC limit of the non-SIP version is at least as stringent as the SIP version. Therefore, the non-SIP version of the rule is more stringent than the SIP version of the rule.

	5.9 Averaging Compliance Option: On or after January 1, 2003, in lieu of compliance with the specified limits in The Table of Standards for floor coatings; industrial maintenance coatings; primers, sealers, and undercoaters; quick-dry primers, sealers, and undercoaters; quick-dry enamels; roof coatings; bituminous roof coatings; rust preventative coatings; stains; waterproofing sealers, as well as flats and non-flats (excluding recycled coatings), manufacturers may average designated coatings such that their actual cumulative emissions from the averaged coatings are less than or equal to the cumulative emissions that would have been allowed under those limits over a compliance period not to exceed one year. Such manufacturers must also comply with the averaging provisions contained in Section 8.0, as well as maintain and make available for inspection records for at least three years after the end of the compliance period. This Section 5.9 and Section 8.0 shall cease to be effective on January 1, 2005, after which averaging will no longer be allowed.	---	This section is removed from the non-SIP version, it is no longer applicable. Therefore, non-SIP version of rule is as stringent as SIP version.
	---	5.8 Prior to January 1, 2011, any coating that meets a definition in Section 3.0 for a coating category listed in the Table of Standards 2 and complies with the applicable VOC limit in the Table of Standards 2 and with Sections 5.2 and 6.1 (including those provision of Section 6.1 otherwise effective on January 1, 2011) shall be considered in compliance with this rule.	Table of Standards 2 is more stringent than the VOC limits of Table of Standards in the SIP-Approved version. Therefore, non-SIP version of rule is as stringent as SIP version.
	Table of Standards (See Attachment X for Table)	Table of Standards 1 (Effective through 12/31/10) (See Attachment X for Table)	The non-SIP rule requirements are the same as the Table of Standards in the SIP approved rule, except Table of Standards 1 expires at which time Table of Standards 2 is in effect. As discussed below these standards are more stringent. Therefore, non-SIP version of rule is as stringent as SIP version.
		Table of Standards 2 (Effective on and after 1/1/11) (See Attachment X for Table)	The requirements of Table of Standards 2 are more stringent than the Table of Standards in the SIP rule. Therefore, non-SIP version of rule is as stringent as SIP version.

	<p>6.3 Test Methods</p> <p>6.3.1 VOC Content of Coatings: To determine the physical properties of a coating in order to perform the calculations in Section 3.26 and 3.27, the reference method for VOC content is U.S. EPA Method 24, except as provided in Sections 6.3.2 and 6.3.15. An alternative method to determine the VOC content of coatings is SCAQMD Method 304-91 (Revised February 1996), incorporated by reference in Section 6.3.14. The exempt compounds content shall be determined by SCAQMD Method 303-91 (Revised August 1996), incorporated by reference in Section 6.3.12. To determine the VOC content of a coating, the manufacturer may use U.S. EPA Method 24, or an alternative method as provided in Section 6.3.2, formulation data, or any other reasonable means for predicting that the coating has been formulated as intended (e.g., quality assurance checks, recordkeeping). However, if there are any inconsistencies between the results of a Method 24 test and any other means for determining VOC content, the Method 24 test results will govern, except when an alternative method is approved as specified in Section 6.3.2. The District Air Pollution Control Officer (APCO) may require the manufacturer to conduct a Method 24 analysis.</p> <p>6.3.2 Alternative Test Methods: Other test methods demonstrated to provide results that are acceptable for purposes of determining compliance with Section 6.3.1, after review and approved in writing by the staffs of the District, the ARB and the U.S. EPA, may also be used. 6.3.3 Methacrylate Traffic Marking Coatings: Analysis of methacrylate multicomponent coatings used as traffic marking coatings shall be conducted according to a modification of U.S. EPA Method 24 (40 CFR 59, subpart D, Appendix A), incorporated by reference in Section 6.3.15. The VOC content of a tint base shall be determined without colorant that is added after the tint base is manufactured. If the manufacturer does not recommend thinning, the VOC Content must be calculated for the product as supplied. If the manufacturer recommends thinning, the VOC Content must be calculated including the maximum amount of thinning solvent recommended by the manufacturer. 7.0 Compliance Schedule	Persons subject to this rule shall be in compliance with this rule by October 31, 2001.	Persons subject to this rule shall be in compliance with this rule by the dates specified within the rule.	No change in the requirements, therefore, non-SIP version of rule is as stringent as SIP version.
8.0 Averaging Compliance Option	8.1 On or after January 1, 2003, in lieu of compliance with the specified limits in the Table of Standards for floor coatings; industrial maintenance coatings; primers, sealers, and undercoaters; quick-dry primers, sealers, and undercoaters; quick-dry enamels; roof coatings; rust		No change in the requirements, therefore, non-SIP version of rule is as stringent as SIP version.

	<p>preventative coatings; stains; waterproofing sealers, as well as flats and non-flats (excluding recycled coatings), manufacturers may average designated coatings such that their actual cumulative emissions from the averaged coatings are less than or equal to the cumulative emissions that would have been allowed under those limits over a compliance period not to exceed one year. Such manufacturers must also comply with the averaging provisions contained in this Section, as well as maintain and make available for inspection records for at least three years after the end of the compliance period. This Section shall cease to be effective on January 1, 2005, after which averaging will no longer be allowed.</p> <p>Per Section 8.1, averaging is no longer applicable. Therefore, Section 8.2 through 8.14 are not listed.</p>		

District Rule 4601 was amended (12/17/2009). As analyzed, each amended section of the non-SIP version of the rule is at least as stringent as, or more stringent than the corresponding section of the SIP version of the rule. Therefore, it is concluded that overall the non-SIP version of the rule is more stringent than the SIP version of the rule.
