

Through 18 months of exposures (total 24 months of exposure), no statistically significant increases in any tumor incidence were observed for the EtO-exposed groups in comparison to the air-exposed control groups.

Percentages at 24 month sacrifice

	100 ppm	33 ppm	10 ppm	Control 1 (0ppm)	Control 2 (0ppm)
Spleen mononuclear cell leukemia (females F-344)	58*	29	20	8	11
Spleen mononuclear cell leukemia (females F-344)	30	31	18	10	16
Peritoneum mesothelioma (males)	13	10	4	2	2
Astrocytoma/Oligodendroglioma/Mixed glioma (males)	6	3	0	1	0

* 0.01 > p > 0.001 for comparison to CI and CII.
