Given that most of the DFC's projects are either larger than an acre or less than 5000 sq ft, the impact to contractor doing business at the DFC would be minimal. In addition, since EISA is the standard for all future storm water projects and the Fed Govt is trying to meet these standards, being consistent between the MS 4 program and the EISA legislation is an advantage. Lastly, having a regulatory driver to ensure compliance is a benefit to the govt therefore, YES, please make sure it is consistent.

Thanks

Subject

Permit

Question

John - Can you let me know if GSA would like to have contractors get a construction stormwater permit at land disturbing

EPA-BAFB-00001198

activities equal to or greater than 5,000 square feet versus the normal 1 acre or greater requirement? I'm trying to get you a revised draft by next week so any information you can provide on what you would like in the permit would be helpful. Thanks!
