

**There is 140.7 Square Miles of JBLM Department of Defense Land
Of which **12.64%** (or 17.80 Square miles) is impervious according
to this dataset**

<http://www.ecy.wa.gov/services/gis/data/landcover/metadata.asp?name=impervious2006>

This data layer is a final 2006 impervious estimate ready for distribution through NOAA CSC. The data set is the 2006 update of NLCD 2001 impervious surfaces for Zone 1, Washington state. This product is used to assess urban growth, map and inventory wetlands, delineate wildlife habitat, determine changes in land cover over time, and more. This layer is a result of NOAA Coastal Services Center and USGS coordinated efforts to produce land cover classification data. C-CAP land cover data is considered the coastal expression of the NLCD. This data set utilized 11 full or partial Landsat TM multispectral scenes which were processed to create an updated 2006 version of 2001 impervious layer for Zone 1, WA state.
