April 16, 2007

To Whom It May Concern:

This is our written notice that Star Township, Antrim County, Alba, Michigan is requesting a Public Hearing be held on the permit for Beeland Group, LLC of Jackson, Michigan to own and operate a proposed Class 1 non-hazardous waste disposal well.

Our residents deserve a right to ask questions about this disposal well to be located in their township. Many did not see the notice printed in the newspaper for this, we did not see the notice either for it was not in our local paper.

One concern already raised is that is this is non-hazardous, why does the material have to be removed from the County it now is in? Other residents have raised other questions and we feel they have the right to have them ask and answered.

We would like to thank you in advance for your immediate attention to this matter and hope that a Public Hearing can be scheduled.

Sincerely,

*Star Township Board*  
*M. Ryszkewicz, Clerk*

Star Township Board

June 25, 2007

Mr. William Bates  
Environmental Protection Agency  
Region 5  
77 W. Jackson Boulevard  
Chicago, IL 60604-3590

Dear Mr. Bates,

Friends of the Jordan River request a 30-day extension\*for the public comment period on the proposed disposal well in Antrim County. The overwhelming concern expressed at the Alba public hearing demonstrates the need to take additional time to ensure the proper information has been gathered, studies have been done, and that the people in the surrounding area are given time to fully understand the proposal and have their concerns addressed.

Clean water is critical to our way of life. We need it to drink, to irrigate our crops, and most importantly to Friends of the Jordan River, to keep our pristine waterways pristine today and for future generations. Once we make a mistake that degrades our water resources, it is almost always impossible to restore to its natural state. Such risks to our waters must be taken with the utmost caution. Though such a proposal may have been discussed internally for quite some time, the proposed injection of contaminated water into our ground is new information to many people in the community.

Unlike many of the surrounding shoreline affluent communities, most residents of Alba do not have resources as readily available to organize in a short time period when proposals that threaten our environment arise. We would like to believe Alba was not chosen because of this. As such, an extension to the public comment period would alleviate such a concern and give us time to ensure mistakes that could last generations are not made.

If you have any questions, please do not hesitate to contact me at [jrichter@friendsofthejordan.org](mailto:jrichter@friendsofthejordan.org) or 231-536-7550.

Sincerely yours,

John Richter  
President, Friends of the Jordan River

ANTRIM COUNTY  
BOARD OF COMMISSIONERS

P.O. Box 520

Bellaire, Michigan 49615

Phone (231) 533-6353

Fax (231) 533-6935

Chairman:

June 18, 2007

At the June 14, 2007 meeting of the Antrim County Board of Commissioners, the following Resolution was offered:

RESOLUTION #20-07 by Bernard Blackmore, seconded by Joseph Allen

WHEREAS, CMS Energy (Beeland Group, LLC) has made application for a class 1 injection well in Star Township in Antrim County, for the disposal of contaminated water from Bay Harbor, a community in Emmet County; and

WHEREAS, the water is contaminated by cement kiln dust leachate due to the historic operations of a cement plant located at the Bay Harbor location; and

WHEREAS, the Michigan Department of Environmental Quality (MDEZ) permitted the Bay Harbor development to locate on top of the old cement plant; and

WHEREAS, the MDEQ and the Environmental Protection Agency (EPA) have received application from and are now considering permitting a class 1 injection well for the disposal of contaminated liquid waste in Star Township in Antrim County; and

WHEREAS, Star Township and the surrounding community are extremely concerned about their well water becoming contaminated due to potential releases of leachate to the environment by the injection well, transportation of liquid waste or operational activities associated with the class 1 injection well; and

WHEREAS, the Antrim County Board of Commissioners feels that Antrim County residents should not have to fear the contamination of their drinking water sources due to a contamination problem from another county; and

WHEREAS, the local unconfined drinking water aquifer and surface water features including area lakes and rivers, (as well as the Jordan River, a premiere blue ribbon trout stream, and the Manistee River), are considered an incredibly valuable and irreplaceable resource; and

WHEREAS, the permit process does not consider the requirement for the applicant to explore any additional feasible and prudent alternatives.

NOW, THEREFORE, BE IT RESOLVED, the Antrim County Board of Commissioners feels that unless CMS Energy, the MDEQ and the EPA can guarantee the class 1 injection well will not in any way contaminate the groundwater, the MDEQ and EPA should require the applicant to explore and pursue alternative options for the proper treatment and management of contaminated liquid waste from the Bay Harbor development and East Park areas of Emmet County, Michigan.

BE IT FURTHER RESOLVED, that the Antrim County Board of Commissioners stands side by side with Star Township in opposition of locating a class 1 injection well within their borders, and offers their full support to Star Township on this important issue.

Yes - Drenth, Dawson, Bary, White, Howelman, Crawford, Stanek, Blackmore, Allen;  
No - None;  
Absent - None.

RESOLUTION #20-07 DECLARED ADOPTED.

EPA REGION 5

Dear Mr. Bates,

We, the undersigned, urge you to deny CMS Energy's proposal for a Class I "Non-Hazardous" waste disposal well in Star Township, Antrim County near the community of Alba. We represent a broad coalition of concerned citizens and organizations who strongly oppose this disposal well and the rationale behind it for the following reasons:

### **Risk to our irreplaceable water resources.**

The region surrounding Alba lies atop an enormous, pristine, freshwater aquifer. This aquifer supplies drinking water for the region's citizens and is *the* source of several major magnificent river systems including the Jordan and Manistee. This aquifer is a priceless, irreplaceable natural treasure. Any mistake, accident or miscalculation could have devastating impacts for many individuals and the natural resources far into the future.

We acknowledge that Class I disposal wells require extensive safeguards and the best engineering technology available. However, they are not foolproof. According to *Downriver Digest*, July/August 1994, of the 173 deep injection wells in the United States, 23 have leaked or failed to meet EPA's standards. Another six had leaks that were not detected by monitors. For example, the controversial Romulus, MI deep disposal wells, despite earnest reassurances and the promise of bonding, have failed. The operators vanished leaving the surrounding communities and natural resources to suffer the consequences.

Exacerbating the 13% failure rate of well safeguards, operators of the leachate collection system in Bay Harbor shut the system down for seven months without telling anyone or installing an alternative solution to halt the continued contamination of Little Traverse Bay. In spite of their "covenant" not to pollute, the operations have proven to be untrustworthy and not reliable with regard to pollution prevention.

The level of risk associated with well safeguards and previous operator failures is unacceptable to such a pristine resource.

### **Strong local opposition.**

While perhaps unintended, the reality is that CMS Energy chose a remote location with limited financial resources to oppose the disposition of toxic wastes generated far away in a privileged resort community. The small rural community of Alba has spoken out very clearly on this issue -- they do not want this well. At EPA's public hearing on June 13, 2007 in Alba, citizens unanimously voiced their outrage over this proposal.

Not only do we oppose the "dumping" of this toxic waste in our neighborhood, but also the transport of an estimated 11 toxic waste-laden tanker truck loads per day, 365 days a year for approximately 20 years places increased wear and tear on the County's infrastructure, its first responders and undue worry among its residents. Elected officials of Star Township and of Antrim and Charlevoix Counties have also disapproved of this proposal. And, who speaks for the rivers, forests and wildlife? Do they have "standing"?

The only proper, moral and ethical solution is for CMS Energy and Bay Harbor to act responsibly, clean up *their* mess and not try to dump their toxic waste on someone else's doorstep.

**CMS Energy needs to be fully accountable for their irresponsible choices.**

In the late 1980's and long before Bay Harbor Resort was developed, scientists reported toxic leachate seeping from CKD waste piles at the then abandoned Penn Dixie Cement Plant. We know that when CKD is infiltrated with water a toxic soup emerges. As required at other sites with CKD piles, the proper disposal method was and is to encapsulate the CKD piles with an impervious barrier of high-density polyethylene or two feet of protective material. Back then, it would have been far easier (and less costly) to encapsulate the CKD piles before development occurred. Instead, Bay Harbor chose to cover it with six to twelve inches of topsoil, build over it and hope the problem would go away. It did not.

We can now futilely argue and litigate and seek to assess blame. Or, CMS Energy and Bay Harbor can simply do what they should have done from the beginning. Their gamble did not pay off. These CKD piles need to be capped and encapsulated and made impermeable to moisture. The concept is very simple but the task will be substantial and costly. However, maintaining a collection system prone to failure, and neutralizing, transporting and disposing of millions of gallons of toxic wastes into the foreseeable future is also expensive and risky, not to mention unethical.

**Conclusion**

In recent years, as science and society grapple with increasingly complex issues, a new ethic has emerged called "The Precautionary Principle." Simply stated, "When an activity raises threats of harm to human health or the environment, precautionary measures should be taken even if some cause and effect relationships have not been established scientifically." We believe that this principle should be applied to the proposed deep injection well in Alba. Should unforeseen problems occur and this aquifer becomes contaminated, there is no easy way to reverse it. Given the unique hydrology in this region, strong local opposition, and the opportunity to hold CMS Energy fully accountable given there are more responsible and protective opportunities to fix their mistakes on-site, the proposed deep well injection should be denied.

Sincerely,

Dr. John W. Richter

The following resolution was offered for adoption by Vollbach, second by Klooster:

## Resolution 119-2007

### Resolution Opposing the Proposed Injection Well in Star Township, Antrim County, Michigan

WHEREAS, the City of East Jordan is aware of CMS Energy's proposed Non-Hazardous Waste Injection Well in Star Township, Antrim County, Michigan, a region surrounding Alba that lies atop an enormous, pristine freshwater aquifer that is the source of our local river system, the Jordan River, as well as many others in the area and

WHEREAS, long before Bay Harbor Resort was developed, scientists reported toxic leachate seeping from the CKD waste piles at the then abandoned Penn Dixie Cement Plant, and

WHEREAS, CMS Energy must be fully accountable for their choice to cover the piles with top soil and build over it, hoping the problem would go away, and

THEREFORE BE IT RESOLVED, CMS Energy and Bay Harbor should be required to cap and encapsulate the CKD piles and make them impermeable to moisture. The City feels CMS Energy and Bay Harbor Resort should act responsibly, clean up their mess and not try to dump their toxic waste elsewhere;

BE IT FURTHER RESOLVED, the City of East Jordan opposes the proposed injection well in Star Township, Antrim County, Michigan and the transport of the toxic waste.

To  
 Subject Alba injection well - permit #MI-009-11-0001

Dear Mr. Bates,

Attached are the remainder of our files of signatories and comments collected since 7/23/07, opposing the proposed injection well near Alba, MI. All together, over 500 individuals and organizations have voiced their disapproval of this proposed disposal well on our website or petitions. Also, please be advised that Antrim and Charlevoix County's Boards of Commissioners, East Jordan's City Council and Michigan's Chapter of Trout Unlimited have all passed unanimous resolutions opposing this well. This represents approximately 60,000 citizens opposing this proposed injection well. Most of these comments express "mere" conventional common sense and are not technical. They do, however, clearly demonstrate important policy considerations a discrete Administrator should review. We look forward to collaboratively seeking alternative solutions to this problem and need your leadership to move forward in this effort.

Sincerely, Dr. John W. Richter - President, Friends of the Jordan River Watershed Inc.

Dear Mr. Richter,

I am writing on behalf of my mother Rhonda O'Connell, my aunt Cheryl Darrah, and my brother Robert Massey, Jr. These three people own the mineral rights of the property CMS wants to put the waste water injection well on. First of all let me say that they had no idea who the buyer of the property was or what it would be used for. The buyers were very misleading and we never got to actually meet them. My family is very much against this well and would like to stop it from happening. The question we have is this: Can they legally put in this well since we still own the mineral rights? It seems to me that owning mineral rights means they can't take anything out of the land, so I would think they wouldn't be allowed to put anything in. I have been asking friends about this matter and they think that even if it's illegal for Consumers to put in this well, they will try to get the permit anyway and hope that the mineral rights owners don't say anything about it. I know that time

is running out so we would appreciate any advice you could give. I have emailed Kevin Elsenheimer and William Bates about this also, so hopefully we can get this permit denied and protect our environment! Thank you in advance for your help.

Sincerely,

Angela Thayer

## Comments

There is a good possibility that this well could possibly leak into the head water of the Manistee and the Jordan river which would inturn enter into Lake Michigan. Prersident Bush signed into law and created a commission to protect our great lakes. The drinking water in this area closes to the proposed well is the best in the state. I do not understand why the EPA would consider this sight when there are other alternatives are a wiser choice.

Isn't it bad enough that we have ground contamination in Bay Harbor, now CMS would like to spread that contamination to the Alba area? This is despicable. NO ONE BUT NO ONE ! can gurantee that this deep well will contain this contamination!!!! If they say they can make put up a 5 billion dollar escrow account for 50 years. To put their money their mouths are.

## Comments

It makes no sense to jeopardize any future risk to the Jordan Watershed which leads to Lake Charlevoix and eventually leads to Lake Michigan when the injection well could be placed elsewhere. I am sure the only reason the Alba area was chosen was due to economic considerations and current population and not looking towards and potential loss to the environment only a monetary concern for today.

## Comments

Hydrologically speaking, the proposed disposal site is destined to cause unwanted--and unwarranted--pollution to ground water supplies throughout the headwaters of the Jordan River. It seems foolhardy to allow this sort of disposal to take place here just because there is a low population base. It will set a precedent that will be hard to overcome in future instances where pollution must either be treated onsite or disposed elsewhere. John D. Schultz, Ph.D. Forest Hydrologist Lake Ann, MI

It is my belief that what CMS Energy is doing is unethical and a disgrace to the country. We are finding ourselves in the middle of an environmental crisis in the world. What they are doing is in direct contradiction of what we are all becoming keenly aware we should NOT do, contribute more to the pollution and destruction of this planet. They need to act responsibly and clean up the mess they have made, not dump it somewhere else. It is "An Inconvenient Truth"!

## Comments

As a property owner along the Jordan River, I'm offended that there would even be consideration of this proposal. Where is the logic and wisdom in such a plan? Obviously absent in those who would think to solve one problem by potentially creating another larger one down the road. I demand decision-makers display some obvious foresight and exercise the "seven generations" wisdom propounded by the Iroquois Confederacy, that "In our every deliberation we must consider the impact of our decisions on the next seven generations." Let us not forget that the Jordan River was the first designated natural and historic river in Michigan in the early-70s, a law that since has protected watersheds throughout the state.
