<b>PART I - PREVENTION OF SIGNIFICANT DETERIORATION (PSD) REVIEW</b>	
<b>Chapter A - Applicability</b>	
I. Introduction. . . . .	A.1
II. New Source PSD Applicability Determination. . . . .	A.3
A. Definition of Source. . . . .	A.3
B. Potential to Emit . . . . .	A.5
1. Basic Requirements. . . . .	A.5
2. Enforceability of Limits. . . . .	A.5
3. Fugitive Emissions. . . . .	A.9
4. Secondary Emissions . . . . .	A.16
5. Regulated Pollutants. . . . .	A.18
6. Methods for Determining Potential to Emit . . . . .	A.19
C. Emissions Thresholds for PSD Applicability. . . . .	A.22
1. Major Sources . . . . .	A.22
2. Significant Emissions . . . . .	A.24
D. Local Air Quality Considerations. . . . .	A.25
E. Summary of Major New Source Applicability . . . . .	A.26
F. New Source Applicability Example. . . . .	A.28
III. Major Modification Applicability. . . . .	A.33
A. Activities That Are Not Modifications . . . . .	A.34
B. Emissions Netting . . . . .	A.34
1. Accumulation of Emissions . . . . .	A.36
2. Contemporaneous Emissions Changes . . . . .	A.37
3. Creditable Contemporaneous Emissions Changes. . . . .	A.38
4. Creditable Amount . . . . .	A.40
5. Suggested Emissions Netting Procedure . . . . .	A.44
6. Netting Example . . . . .	A.51

## II.E INCREMENT CONSUMPTION AND EXPANSION

The amount of PSD increment that has been consumed in a PSD area is determined from the emissions increases and decreases which have occurred from sources since the applicable baseline date. It is useful to note, however, that in order to determine the amount of PSD increment consumed (or the amount of available increment), no determination of the baseline concentration needs to be made. Instead, increment consumption calculations must reflect only the ambient pollutant concentration change attributable to increment-affecting emissions.

Emissions increases that consume a portion of the applicable increment are, in general, all those not accounted for in the baseline concentration and specifically include:

*! actual emissions increases occurring after the **major source baseline date**, which are associated with physical changes or changes in the method of operation (i.e., construction) at a major stationary source; and*

*! actual emissions increases at any stationary source, area source, or mobile source occurring after the **minor source baseline date**.*

The amount of available increment may be added to, or "expanded," in two ways. The primary way is through the reduction of actual emissions from any source after the minor source baseline date. Any such emissions reduction would increase the amount of available increment to the extent that ambient concentrations would be reduced.

Increment expansion may also result from the reduction of actual emissions after the major source baseline date, but before the minor source baseline date, if the reduction results from a physical change or change in the method of operation (i.e., construction) at a major stationary source. Moreover, the reduction will add to the available increment only if the reduction is included in a federally enforceable permit or SIP provision. Thus, for major stationary sources, actual emissions reductions made prior to the minor source baseline date expand the available increment just as increases before the minor source baseline date consume increment.
