Sampling Field Worksheet

Project: Ashuelot River TMDL	Date: 08-23-01
Name of Samplers: GEORGE BERLANDI, PAUL PISZCZEK	
Waterbody Name: ~~Ash Swamp Brook~~ ASHUELOT RIVER	Station ID: ~~Ash~~ IIeM-Ash
Weather: SUNNY, HIGH CLOUDS, LIGHT WINDS, ~80°F	

Field Measurements (Most are bucket samples taken within the top 6 inches of water except at impoundments – see note below)

Bucket (B) or Instream (I)	Depth of Sample from surface(feet)	~ distance from mid-channel (ft)	~ distance from bank (ft)	Military Time – Hours:Min		Temperature (degrees C)	DO (mg/L)	Conductivity (uS/cm)	pH	
				Bucket sample collected	Field measurements taken	see note below for Calibration Elevation and measuring DO in impoundments.			pH slope (SLP): SEE CALIBRATION SHEET	
B	SURFACE	MID CHANNEL	0	1149	1152	21.4	7.03	238.4	6.58	
Is DUPLICATE to be run? (NO) (If yes, record duplicate of last set of field measurements in this row.)				N/A	N/A	Dup N/A	Dup N/A	Dup N/A	Dup N/A	6.0 std. N/A

Lab Samples (All lab samples are bucket samples taken within the top 6 inches of water)

Approximate Average Depth of River (feet): B 3.0 Approximate width of river (feet): 50

Parameters	Bottle Type	Preservation	Duplicates?	Total # of bottles to fill.	Military Time-Hours:Mim	~ distance from mid-channel (ft)	~ distance from bank (ft)
~~BOD5 and/or~~ BOD20, TSS, NO2+NO3-N,	1.6 L (1/2 gal) white, polyethylene	Chilled on ice to 4 deg C.	NO	1	1149	MID CHANNEL →	0
TKN, NH3-N, TP	250 mL, brown polyethylene	(pre-acidified), 0.5 mL of 9N H_2SO_4 to pH <2, chilled on ice to 4 deg C.	↓	1	↓	↓	↓
Ortho-P	50 mL clear polyethylene	Field filtered through 0.45 um filter; chilled on ice to 4 deg C.	↓	1	↓	↓	↓
Chlor A	1L brown polyethylene	Chilled on ice to 4 deg C.	↓	1	↓	↓	↓
TOC	2-40 mL glass vials	(pre-acidified), 0.5 mL of 9N H_2SO_4 to pH <2, chilled on ice to 4 deg C.	↓	2	↓	↓	↓

Aquatic Plant Growth:

	% Coverage
Macrophytes (rooted plants):	20
Phytoplankton (free floating):	0
Periphyton (attached algae):	5

Canopy (Well Shaded, Moderately Shaded, Mostly Open): MOSTLY OPEN

MOST MACROPHYTES IMMEDIATELY U/S FROM ASH SWAMP BROOK CONFLUENCE

Other Comments / Observations

Color (clear, tea-colored, etc): CLEAR

Substrate (ie, sandy, cobbles, muck, etc.): SAND, SILT, WOODY DEBRIS

Odor: NONE

Notes: Label sample bottles with black permanent marker before they get wet. Each bottle label must include the following: Waterbody name, station ID, sample date, sample time, initials of samplers, and the parameters to be analyzed. If duplicates are taken, designate one bottle as "D1" and the other as "D2". Do not take duplicates from the same bucket of water. For calibration of the DO meter, use an elevation of 300 ft for the Cocheco River and 500 ft for the Ashuelot River. Most field measurements are taken of the top 6 inches by bucket. At certain impoundments, however, DO/Temp and depth measurements will also be taken in-stream, at 25% depth from surface, at mid-depth and ~ 1 foot from the bottom.

Phytoplankton (free floating): 0
Periphyton (attached algae): 0
Canopy (Well Shaded, Moderately Shaded, Mostly Open): Some shade along banks

Other Comments / Observations
Color (clear, tea-colored, etc): Pale straw color
Substrate (ie, sandy, cobbles, muck, etc.):
Odor: Sandy

Notes: Label sample bottles with black permanent marker before they get wet. Each bottle label must include the following: Waterbody name, station ID, sample date, sample time, initials of samplers, and the parameters to be analyzed. If duplicates are taken, designate one bottle as "D1" and the other as "D2". Do not take duplicates from the same bucket of water. For calibration of the DO meter, use an elevation of 300 ft for the Cocheco River and 500 ft for the Ashuelot River. Most field measurements are taken of the top 6 inches by bucket. At certain impoundments, however, DO/Temp and depth measurements will also be taken in-stream, at 25% depth from surface, at mid-depth and ~ 1 foot from the bottom.

Sampling Field Worksheet

Project: Ashuelot River TMDL — Date: 8/23/01

Name of Samplers: SL / TC — (8/22/01 @ 11AM - 8/23/01 @ 8AM)

Waterbody Name: Keene WWTF — Station ID: Keene WWTF

Weather: Partly Cloudy / Dry

Field Measurements (Most are bucket samples taken within the top 6 inches of water except at impoundments –see note below)

Bucket (B) or Instream (I)	Depth of Sample from surface(feet)	~ distance from mid-channel (ft)	~ distance from bank (ft)	Military Time – Hours:Min		Temperature (degrees C)	DO (mg/L)	Conductivity (uS/cm)	pH	
				Bucket sample collected	Field measurements taken	see note below for Calibration Elevation and measuring DO in impoundments.			pH slope (SLP):	
B				1:15PM*		22.8	8.39	748	7.54	
									(7.37)	
				(Composite sample)		(20.0)	(7.68)	(763)		
Is DUPLICATE to be run? NO (If yes, record duplicate of last set of field measurements in this row.)						Dup	Dup	Dup	Dup	6.0 std.

Lab Samples (All lab samples are bucket samples taken within the top 6 inches of water)

Approximate Average Depth of River (feet): — Approximate width of river (feet):

Parameters	Bottle Type	Preservation	Duplicates?	Total # of bottles to fill.	Military Time-Hours:Mim	~ distance from mid-channel (ft)	~ distance from bank (ft)
BOD5 and/or BOD20, TSS, NO2+NO3-N,	1.6 L (1/2 gal) white, polyethylene	Chilled on ice to 4 deg C.	NO	1	(Same here)		
TKN, NH3-N, TP	250 mL, brown polyethylene	(pre-acidified), 0.5 mL of 9N H_2SO_4 to pH <2, chilled on ice to 4 deg C.		1	"		
Ortho-P	50 mL clear polyethylene	Field filtered through 0.45 um filter; chilled on ice to 4 deg C.		1	"		
Chlor A	1L brown polyethylene	Chilled on ice to 4 deg C.		1	"		
TOC	2-40 mL glass vials	(pre-acidified), 0.5 mL of 9N H_2SO_4 to pH <2, chilled on ice to 4 deg C.		2	"		

Aquatic Plant Growth: % Coverage
Macrophytes (rooted plants): _____
Phytoplankton (free floating): _____
Periphyton (attached algae): _____
Canopy (Well Shaded, Moderately Shaded, Mostly Open):

Other Comments / Observations: *No effluent flow since 8:40AM
Color (clear, tea-colored, etc):
Substrate (ie, sandy, cobbles, muck, etc.):
Odor:

Notes: Label sample bottles with black permanent marker before they get wet. Each bottle label must include the following: Waterbody name, station ID, sample date, sample time, initials of samplers, and the parameters to be analyzed. If duplicates are taken, designate one bottle as "D1" and the other as "D2". Do not take duplicates from the same bucket of water. For calibration of the DO meter, use an elevation of 300 ft for the Cocheco River and 500 ft for the Ashuelot River. Most field measurements are taken of the top 6 inches by bucket. At certain impoundments, however, DO/Temp and depth measurements will also be taken in-stream, at 25% depth from surface, at mid-depth and ~ 1 foot from the bottom.

TOC	2-40 mL glass vials	(pre-acidified), 0.5 mL of 9N H_2SO_4 to pH <2, chilled on ice to 4 deg C.	↓	2	↓	↓	↓

Aquatic Plant Growth: (% Coverage)
Macrophytes (rooted plants): 0-5%
Phytoplankton (free floating): 10-15% Duckweed
Periphyton (attached algae): 0-5%
Canopy (Well Shaded, Moderately Shaded, Mostly Open): Mostly Open

Other Comments / Observations
Color (clear, tea-colored, etc): light decaf tea-weak
Substrate (ie, sandy, cobbles, muck, etc.): Muck
Odor: Slight odor- muck

Notes: Label sample bottles with black permanent marker before they get wet. Each bottle label must include the following: Waterbody name, station ID, sample date, sample time, initials of samplers, and the parameters to be analyzed. If duplicates are taken, designate one bottle as "D1" and the other as "D2". Do not take duplicates from the same bucket of water. For calibration of the DO meter, use an elevation of 300 ft for the Cocheco River and 500 ft for the Ashuelot River. Most field measurements are taken of the top 6 inches by bucket. At certain impoundments, however, DO/Temp and depth measurements will also be taken in-stream, at 25% depth from surface, at mid-depth and ~ 1 foot from the bottom.

Sampling Field Worksheet

Project: Ashuelot River TMDL | Date: 8/29/01

Name of Samplers: S Duchesne / G Berlandi

Waterbody Name: Ashuelot River | Station ID: 15E-Ash

Weather: Warm / Sunny

Field Measurements (Most are bucket samples taken within the top 6 inches of water except at impoundments –see note below)

Bucket (B) or Instream (I)	Depth of Sample from surface(feet)	~ distance from mid-channel (ft)	~ distance from bank (ft)	Military Time – Hours:Min		Temperature (degrees C)	DO (mg/L).	Conductivity (uS/cm)	pH	
				Bucket sample collected	Field measurements taken	see note below for Calibration Elevation and measuring DO in impoundments.			pH slope (SLP):	
B	top foot	10-12'	10-12'	11:05	11:12	22.6 (and probe)	Meter dead	229.2	6.94	
					11:25	22.1	7.37 - TZ meter			
Is DUPLICATE to be run? No (If yes, record duplicate of last set of field measurements in this row.)						Dup	Dup	Dup	Dup	6.0 std.

Lab Samples (All lab samples are bucket samples taken within the top 6 inches of water)

Approximate Average Depth of River (feet): | Approximate width of river (feet):

Parameters	Bottle Type	Preservation	Duplicates?	Total # of bottles to fill.	Military Time-Hours:Mim	~ distance from mid-channel (ft)	~ distance from bank (ft)

Substrate (ie, sandy, cobbles, muck, etc.): sandy
Odor: none

Notes: Label sample bottles with black permanent marker before they get wet. Each bottle label must include the following: Waterbody name, station ID, sample date, sample time, initials of samplers, and the parameters to be analyzed. If duplicates are taken, designate one bottle as "D1" and the other as "D2". Do not take duplicates from the same bucket of water. For calibration of the DO meter, use an elevation of 300 ft for the Cocheco River and 500 ft for the Ashuelot River. Most field measurements are taken of the top 6 inches by bucket. At certain impoundments, however, DO/Temp and depth measurements will also be taken in-stream, at 25% depth from surface, at mid-depth and ~1 foot from the bottom.
