Subject: Re: DRAFT CLASS IID PERMIT NUMBER PAS2D701BALL

Dear Mr. Scavello, I write to you in support of the EPA convening a hearing on the draft permit for an injection well for Penneco Environmental Solutions, LLC in Plum Borough, PA. Among the issues I wish to raise at the hearing include the risk of seismic (earthquake) activity. According to USGS scientists, increased seismic activity is associated with wastewater disposal wells in states such as Oklahoma, Colorado, Arkansas, Ohio, and Texas. During the first half of 2016, in N. Lima, Mahoning County, OH, a single injection well took in 248,384 barrels (10,432,128 gallons) of liquid waste. Transporting this waste means dangerous truck traffic, and injecting it into the ground means increased seismic activity. Please hold a public hearing on this issue.

Subject: Do not approve permit #PAS2D701BALL to dispose oil and gas wastewater in Plum
Categories: Penneco - Hearing

I am writing as a Pennsylvania resident to urge you not to approve the proposed permit for Penneco Environmental Solutions to dispose oil and gas wastewater in Plum Borough, PA.

I do not want to see our water supplies threatened by the many toxic chemicals found in drilling waste, and the site is too close to the 40 oil and gas wells already existing in Plum. Additionally, the transport and storage of millions of gallons of hazardous wastewater is a risk to nearby residents from spills and accidents which EPA does not have the resources to monitor.

Further, EPA should not be granting a permit to Penneco which has a long history of violations of oil and gas rules in Pennsylvania. Penneco has a record of environmental management including spills and water contamination, some of which have previously happened in Plum.

Thank you.

Mr. Scavello,

On July 20, 2017 I sent an email to you requesting a public hearing concerning Permit # PAS2D701BALL be scheduled for public comment by the residents and elected officials of the Municipality of Murrysville. I reiterate the Municipality's position below.

"The Municipality of Murrysville in Westmoreland County, Pennsylvania ("Murrysville") is a community of over 20,000 residents covering approximately 37 square miles. The proposed injection well permit request ("Permit Request") in neighboring Plum Borough, Allegheny County, Pennsylvania ("Plum") recently was brought to the attention of Murrysville Council at a public meeting. During the citizen comment portion of our July 19, 2017 meeting, concerns were raised regarding the impact that the proposed injection well may have on Murrysville's residents and property interests. Given the close proximity of the proposed injection well to Murrysville and the significant number of homes in Murrysville currently accessing well water, the Permit Request is of great interest to the Murrysville community. Accordingly, on behalf of its residents, Murrysville Council formally and timely requests a public hearing in order to learn more about the Permit Request and the proposed injection well."

Please acknowledge receipt of this request and advise if a hearing will be scheduled.

Jim Morrison
Chief Administrator
Municipality of Murrysville
(P) 724-327-2100

These complaints are referencing proposed permits we have advertised. I would forward them to us and we will add to our record. For the rav system can you just close them out and say comments are being added to the administrative record for the draft permit. We will be addressing all comments in one document.

Subject: Permit no. PAS2D701BALL

I am writing to request that you have a hearing on the injection well planned for Plum Borough. The above mentioned permit number is to allow an injection well to be installed. I am extremely concerned about this type of activity anywhere but even more concerned because of the old coal mines in the area. Injection wells cause earthquakes. In the January/February edition of Popular Science there is a wonderful article entitled Earthquake Nation. There's a whole lot of shaking going on in the Midwest----and humans are causing it. Oklahoma which historically has had few earthquakes of magnitude 3.0 or higher, started rumbling regularly in 2009. The Oklahoma Geological Survey recorded 35 such quakes in 2012, 109 in 2013, and 584 in 2014. (The prior annual average was fewer than two.) By late October, the 2015 figure had already exceeded 700!!!!!!!!!! Scientists have figured out the reason: the oil and gas industry's practice of injecting wastewater deep underground. We can not afford to have the earth disturbed in that way. The mines are already rotting and subsiding. I implore you to listen to the people and let us have a say too.

Thank you,
Patricia Emich

Subject: Re: DRAFT CLASS IID PERMIT NUMBER PAS2D701BALL

Categories: Penneco - Hearing

Dear Mr. Scavello,

As a member of the Southwest Pennsylvania Environmental Health Project team which monitors and helps residents address potential health impacts associated with unconventional oil and gas development (UOGD), I am writing to urge the EPA to convene a hearing on the draft permit for an injection well for Penneco Environmental Solutions, LLC in Plum Borough, PA.

Among the concerns that have been raised about injection wells is the risk of seismic (earthquake) activity. Wastewater disposal wells in states including Oklahoma, Colorado, Arkansas, Ohio, and Texas have experienced increased seismic activity according to USGS scientists. Moreover, transporting this waste means both dangerous truck traffic and particulate matter emissions into the air, and injecting it into the ground means increased seismic activity and the potential for groundwater pollution. Because these events may significantly impact the health of nearby residents, there needs to be an assessment of the risks before the company is permitted to proceed.

Please hold a public hearing on this issue so that public concerns can be raised and properly evaluated.

I am writing as a Pennsylvania resident to urge you not to approve the proposed permit for Penneco Environmental Solutions to dispose oil and gas wastewater in Plum Borough, PA.

I do not want to see our water supplies threatened by the many toxic chemicals found in drilling waste, and the site is too close to the 40 oil and gas wells already existing in Plum. Additionally, the transport and storage of millions of gallons of hazardous wastewater is a risk to nearby residents from spills and accidents which EPA does not have the resources to monitor.

Further, EPA should not be granting a permit to Penneco which has a long history of violations of oil and gas rules in Pennsylvania. Penneco has a record of environmental management including spills and water contamination, some of which have previously happened in Plum.

Thank you.

Ms. Memory Derthick

Subject: Re: DRAFT CLASS IID PERMIT NUMBER PAS2D701BALL

Categories: Penneco - Hearing

Dear Mr. Scavello,

I write to you in support of the EPA convening a hearing on the draft permit for an injection well for Penneco Environmental Solutions, LLC in Plum Borough, PA.

Among the issues I wish to raise at the hearing include the risk of seismic (earthquake) activity. According to USGS scientists, increased seismic activity is associated with wastewater disposal wells in states such as Oklahoma, Colorado, Arkansas, Ohio, and Texas.

During the first half of 2016, in N. Lima, Mahoning County, OH, a single injection well took in 248,384 barrels (10,432,128 gallons) of liquid waste. Transporting this waste means dangerous truck traffic, and injecting it into the ground means increased seismic activity.

Please hold a public hearing on this issue.
