Subject: RE: Allen and Allen Oil Company : Proposed Administrative Order - SDWA-06-2020-1108

David,

Here is a schematic of the well.

The plugging plan is to:

1. Pump cement down between the tubing and casing till it comes out the top.
2. Put a plug in the tubing 500 feet down and fill up tubing with cement.
3. Cut off tubing and casing below ground level and fill back over location with dirt.

Mr Reitz:

Please do not forget to include Rick Davis and Steven Kohler in all discussions concerning this well this well moving forward.

Please send me a written copy of the plugging plan after you three agree on a technical plan.

You should do that by sending your official reply to the Administrative Order to our Region 6 Hearing Clerk.

I said in my last email I would contact you today. I am going to try and meet with the Osage Agency engineer tomorrow or Wed and talk about what their requirements are to plug this well. I will then talk to a contractor about the cost this week and get back to you.
