## **AgION™** ANTIMICROBIAL Technology

### *Did You Know . . .*

80% of adults are extremely worried about bacteria.  
 The average desk harbors 100 times more bacteria than a kitchen table and 400 times more bacteria than the average toilet.\*  
 In the past 10 years, approximately 1000 different antibacterial products were introduced.  
 Pens in offices, banks and public places are shared by hundreds of people and can spread bacteria *on contact*, potentially causing unnecessary illness.  
 Bacteria *cannot* grow on Preventa® pens because they are manufactured using the world's most advanced inorganic natural compound—AgION™ Antimicrobial.

### *What Is AgION™ Antimicrobial And How Does It Work?*

AgION™ antimicrobial is a silver ion delivery system that prevents the growth and migration of damaging bacteria, yeasts, molds and fungi on a product's surface.

Silver is a naturally occurring and effective antimicrobial material in its ionic form (i.e., silver nitrate for newborn eye treatment).

The patented antimicrobial compound is suspended or mixed right into manufacturing materials, such as plastic and foam.

Moisture in the air causes a controlled release of silver ions at a slow and steady rate to provide continuous protection against hundreds of strains of damaging bacteria, all molds and yeasts, as well as many other microbes.

*Untreated*

*Treated*

### *AgION™ Technology Is . . .*

The safest, most effective and longest lasting antimicrobial protection available.  
 Used by doctors and in hospitals, homes and offices nationwide.  
 EPA-registered and FDA-recognized.  
 Used in other products, including medical devices (catheters, heart valves), water filtering systems, food service systems.  
 Safe for humans and animals.
