**Subject: Submission of Reports and Quarterly Update in Support of Registration Review:
DCPA – (GDCI ID# 078701)
Special Study Guideline Requirement -- Comparative Thyroid Assay**

Dear Mr. Page:

Enclosed please find the following reports and updates, submitted in support of Registration Review of DCPA (aka Dacthal; chlorthal dimethyl):

- Validation of an Immunoassay Method for the Measurement of Thyroid Stimulating Hormone (TSH) in Rat Serum. Seavers, L. June 2018 (Envigo Study No. SL13SG).
- Validation of a Bioanalytical Method for the Determination of 3,3,5'-Triiodo-L-Thyronine (T3) and Thyroxine (T4) in Rat Serum using Liquid Chromatography with Tandem Mass Spectrometric Detection (LC-MS/MS). Peard, A. June 2018 (Envigo Study No. FF58YR).
- DCPA (Chlorthal Dimethyl): Dose Range Finding Pre-Natal Developmental Thyroid Study in Sprague-Dawley Rats by Oral Administration. Leggett, A. June 2018 (Envigo Study No. BDG0204).
- Summary Table of Thyroid Hormone Methods and Control Ranges – Sprague Dawley Rats, Charles River UK (Envigo).
- Study outline and design (Envigo Study Plan No. JW36WK).
- Comparative Thyroid Assay - Quarterly Update (dated 24-Aug-2018).

We have the methods developed now for DCPA in both rat milk and plasma and are undergoing the required validation studies currently. As soon as these are fully reported, we will send these in to EPA, together with our DCPA: Dose range finding pre and post-natal developmental thyroid study (including a PTU positive control group) in Sprague-Dawley rats by oral administration (Envigo Study Plan: JW36WK) Study Protocol for EPA's review and approval, before we commence the study.

Note that this report is submitted in partial fulfillment of the Special Study Guideline requirement (ss-comparative thyroid) and additional reports will be submitted as soon as they become available. If you have questions or require additional information, please do not hesitate to contact me at (949) 221-6109 or jonw@amvac-chemical.com. Thank you for your attention to this matter.

Best regards,

A handwritten signature in black ink that reads "Jon C. Wood". The signature is written in a cursive style with a large, sweeping initial "J".

Jon C. Wood
Sr. Regulatory Manager

Plan for completion of DCPA developmental thyroid studies:

1) DCPA (Chlorthal Dimethyl): Dose Range Finding Pre and Post Natal Developmental Thyroid Study in Sprague Dawley Rats by Oral Administration (Envigo Study: BDG0204).

We need to rerun Phase I of this study because the rat Luminex immunofluorescence assay which was used at the time the study was performed was not able to detect quantifiable levels of T4 and T3 in plasma from rat fetuses: and these are critical endpoints on the study. The assays were validated to the lowest possible limits of detection taking into account the limited available scientific literature on this subject.

As Phases II and III of the study were scheduled to start after Phase I, we acted quickly and those phases were not performed and will be performed once the rerun of Phase I has been completed. Detection of T4 and T3 and TSH in the dams and TSH in the fetuses was successful using the Luminex assay.

In order to overcome this challenge Envigo has now developed an LC-MS MS assay with much lower detection limits (pg/ml) which has been proven to detect T4 and T3 in Control fetuses. The assay, which detects T4 and T3 simultaneously, has been satisfactorily validated for accuracy and precision and we also have 1 month frozen stability data and are currently investigating stability for longer periods of storage. The Luminex assay is also currently being validated for detection of TSH in serum so that all 3 hormones are assayed in the same medium, serum.

The rerun of Phase I was authorised by UK Home Office and the in life phase and thyroid hormone assays have been successfully completed as follows:

Animal arrival 22 February 2017.

Start of dosing on Day 6 after mating: 6 March 2017

Completion of in life phase: 26 March 2017

Thyroid hormone assay results issued: 19 May 2017

The results from Phase I have been reviewed by US EPA.

Submission of the following Reports and Table as per 2nd Quarterly update 2018.

Validation of an Immunoassay Method for the Measurement of Thyroid Stimulating Hormone (TSH) in Rat Serum. Seavers, L. June 2018 (Envigo Study Number SL13SG)

Validation of a Bioanalytical Method for the Determination of 3,3,5'-Triiodo-L-Thyronine (T3) and Thyroxine (T4) in Rat Serum using Liquid Chromatography with Tandem Mass Spectrometric Detection (LC-MS/MS). Peard, A. June 2018 (Envigo Study Number FF58YR)

DCPA (Chlorthal Dimethyl): Dose Range Finding Pre-Natal Developmental Thyroid Study in Sprague-Dawley Rats by Oral Administration. Leggett, A. June 2018 (Envigo Study Number BDG0204).

Table: Summary of Thyroid Hormone Methods and Control Ranges – Sprague Dawley Rats, Charles River UK (Envigo)

The following method validation studies are in progress:

DCPA: Validation of a Bioanalytical Method for the Determination of Chlorthal Dimethyl (DCPA) in Rat Plasma (K₂EDTA) using Liquid Chromatography with Tandem Mass Spectrometric Detection (LC-MS/MS). Envigo Study: DC87NT. Protocol Issued on 19 June 2018. Final Report scheduled for September 2018.

DCPA: Validation of a Bioanalytical Method for the Determination of Chlorthal Dimethyl (DCPA) in Rat Milk using Liquid Chromatography with Tandem Mass Spectrometric Detection (LC-MS/MS). Envigo Study: CH09GN. Protocol Issued on 19 June 2018. Final Report scheduled for September 2018.

The full draft study protocol will be submitted into EPA by October 2018 for EPA's review:

DCPA: Dose range finding pre and post-natal developmental thyroid study (including a PTU positive control group and milk investigation) in Sprague-Dawley rats by oral administration. (Envigo Study Number: JW36WK).

Envigo CRS Ltd. Registered in England No. 1815730

envigo.com

Testing on the new range-finding pre- and post-natal developmental thyroid study (Envigo Study No. JV36WK) study will proceed as soon as possible following authorisation to proceed is received from US EPA.

The results will determine the doses for the definitive main pre and post natal developmental thyroid study (BDG0202) and the precise design and size of the study (i.e. if direct dosing of pups required) and if it is how many groups of pups will need to be dosed.

2) DCPA (Chlorthal Dimethyl): Definitive Main Pre and Post Natal Developmental Thyroid Study in CD Rats by Oral Administration (Envigo Study:BDG0202)

Testing will proceed as soon as possible once the range-finding pre- and post-natal developmental thyroid study (Envigo Study No. JV36WK) has been completed and all of the results from that study have been reviewed by US EPA and authorisation to proceed is received.

 24 August 2018

Footnote(s)	<p>20. Data are required for six species of dicots from at least four families, one species of which is soybean (<i>Glycine max</i>). Data are required for four species of monocots from at least two families, one species of which is corn (<i>Zea mays</i>). At least one of either the monocot or dicot species must be a root crop.</p> <p>25. A Tier II study is required. A Tier I plant study may be conducted in lieu of a Tier II study with the understanding that any adverse effects observed by the Tier I study would necessitate conduct and submission of a Tier II study as well. The purpose of a Tier II study is to establish both a definitive No Observed Adverse Effect Concentration (NOAEC), or alternatively, a concentration at which there is a 5% observed inhibition effect (IC05), to be used in a risk assessment and effects determination for endangered or threatened species (listed species), and a definitive IC25 (concentration at which there is a 25% observed inhibition effect) for assessing risk to non-listed nontarget plants. If any adverse effects are observed in a Tier I study and neither a definitive NOAEC nor a definitive IC05 value is available, then the Agency may have to presume in its effects determination, that DCPA "may affect" and is "likely to adversely affect" listed plant species.</p>

Protocol	N
Target Submission Date	01/31/2016
Use Pattern	A; B; C; II; K; U
Test Substance	TEP
Time Frame	36 month(s)
Footnote(s)	1. The scope of this requirement is dependent upon the registrant's intent to support the rotation of particular crops into areas previously treated with DCPA and the desired plantback interval(s) for these crops. Any crop without a registered use and for which the registrant wishes rotation to be allowed requires field trial data to determine a suitable tolerance level. A crop group approach, requiring data on representative commodities, may be appropriate if several crops within a group are to be rotated. For individual crops, testing must include the standard number of trials that would be needed to support tolerances for direct crop treatment, e.g., 20 trials for wheat. In its data submission, the registrant must indicate the crops it wishes to support for rotation and the corresponding proposed plant-back intervals.
Registrant Response	N.A.
Guideline Requirement Number - 870.3465	
Study Title	90-day inhalation toxicity
Protocol	N

Target Submission Date	01/31/2015
Use Pattern	A; B; C; II; K; U
Test Substance	TGA
Time Frame	24 month(s)
Footnote(s)	
Registrant Response	N.A.
Guideline Requirement Number - 870.6200	
Study Title	Neurotoxicity screening battery
Protocol	N
Target Submission Date	01/31/2014
Use Pattern	A; B; C; II; K; U
Test Substance	TGA
Time Frame	12 month(s)
Footnote(s)	
Registrant Response	N.A.
Guideline Requirement Number - 870.7800	
Study Title	Immunotoxicity
Protocol	N
Target Submission Date	01/31/2014
Use Pattern	A; B; C; II; K; U
Test Substance	TGA
Time Frame	12 month(s)
Footnote(s)	
Registrant Response	N.A.
Guideline Requirement Number - SS-1066	
Study Title	Chronic Sediment - Hyalella Azteca
Protocol	Y
Target Submission Date	01/31/2015
Use Pattern	A; B; C; II; K; U
Test Substance	TGA
Time Frame	24 month(s)
Footnote(s)	6. Test Method 100.4: Hyalella azteca 42-d Test for Measuring the Effects of Sediment-associated Contaminants on Survival, Growth, and Reproduction in USEPA 2000 Methods for Measuring the Toxicity and Bioaccumulation of Sediment-associated Contaminants with Freshwater Invertebrates EPA 600/R-99/064 8. Protocol must be submitted to the Agency for review and approval prior to study inception. The draft protocol must be submitted to the Agency within 90 days of receipt of this DCI.
Registrant Response	N.A.
Guideline Requirement Number - SS-1069	
Study Title	Chronic Sediment - Chironomus dilutus
Protocol	Y
Target Submission Date	01/31/2015
Use Pattern	A; B; C; II; K; U

Test Substance	TGA1			
Time Frame	24 month(s)			
Footnote(s)	5. Test Method 100.5: Life-cycle Test for Measuring the Effects of Sediment-associated Contaminants on Chironomus dilutus (formerly known as C. tentans) in USEPA 2000 Methods for Measuring the Toxicity and Bioaccumulation of Sediment-associated Contaminants with Freshwater Invertebrates EPA 600/R-99/064 9. Protocol must be submitted to the Agency for review and approval prior to study inception. The draft protocol must be submitted to the Agency within 90 days of receipt of this DCI			
Registrant Response	NA.			
Guideline Requirement Number - SS-1072				
Study Title	Chronic Sediment - Leptocheirus plumulosus			
Protocol	Y			
Target Submission Date	01/31/2015			
Use Pattern	A; B; C; II; K; U			
Test Substance	TGA1			
Time Frame	24 month(s)			
Footnote(s)	9. Protocol must be submitted to the Agency for review and approval prior to study inception. The draft protocol must be submitted to the Agency within 90 days of receipt of this DCI 19. Leptocheirus plumulosus in USEPA 2001 Method for Assessing the Chronic Toxicity of Marine and Estuarine Sediment-associated Contaminants with the Amphipod Leptocheirus plumulosus EPA 600/R-01/020			
Registrant Response	NA.

Guideline Requirement Number - SS-1075				
Study Title	Avian Acute Inhalation			
Protocol	Y			
Target Submission Date	10/31/2013			
Use Pattern	A; B; C; II; K; U			
Test Substance	TGA1			
Time Frame	9 month(s)			
Footnote(s)	4. Test organism must be most sensitive avian species as shown in acute oral toxicity testing. Registrant must submit a protocol that includes an explanation of the choice of test species.			
Registrant Response	NA.			
Guideline Requirement Number - SS-thyroid tox.				
Study Title	comparative thyroid toxicity study			
Protocol	Y			
Target Submission Date	01/31/2015			
Use Pattern	A; B; C; II; K; U			
Test Substance	TGA1			
Time Frame	24 month(s)			
Footnote(s)	10. Protocol must be submitted to the Agency for review and approval prior to study inception. The draft protocol must be submitted to the Agency within 90 days of receipt of this DCI.

To: [Rodriguez, Eileen](#)
Subject: CDX DCI Data Submission Transmitted to OPP
Date: Tuesday, August 28, 2018 11:04:19 AM

Your Data Submission (GDCI-078701-1140) has been successfully transmitted to OPP and is awaiting processing. Your tracking number is CDX_DCI_2018_000403.

Company Name: AMVAC CHEMICAL CORPORATION
Company Number: 5481

If you have questions concerning this message, you may contact the CDX Help Desk by email at helpdesk@epacdx.net or by calling the CDX Technical Support Staff through our toll free telephone support on (888) 890-1995 between Monday through Friday from 8:00 am to 6:00 pm EST/EDT. For International callers, the CDX Help Desk can also be reached at (970) 494-5500.
