

Joint Exhibit 33

DCPA (078701) REGISTRATION REVIEW REGISTRANT CHECK-IN MEETING
March 17, 2017 (11-12pm EST, PYS-9100)
Call in: 866-299-3188/703-308-8019

Attendees:

- AMVAC: Jon Wood (Chemical Manager), Dick Freeland (Director of Environmental Studies)
- PRD: Jill Bloom (TL), Marquee D. King (CRM); Tom Myers (SRA)

Action Items

- Amvac:
 - Developmental thyroid - study due date in Q4FY18, **provide Agency quarterly status updates**
 - Labels need to reflect use termination from Federal Register dated July 27, 2005 – **will make changes to technical compound labels**
 - Clarify label use parameters, specifically the following: **the maximum amount of DCPA applied per season was not specified on the labels for most uses. Some labels specified one application of DCPA per crop cycle for lettuce but no other labels specified a maximum number of applications for any of the crops. In addition, minimum application intervals were not specified on any of the labels.**
 - Aerial application use – **will delete from label**, then SS-1075 avian inhalation toxicity no longer required
 - Data on turf/ornamentals – **will provide any usage information**, to help characterize usage
- Agency:
 - SS-1072 (Chronic Sediment - Leptocheirus plumulosus study) – **will confirm with EFED whether a clean/negative 10-day study negates the need for the 21-day study**
 - 860.1300 (nature of the residue: poultry) – **confirm IF alfalfa is deleted this study is no longer required**
 - 860.1900 (field accumulation in rotational crops) – **confirm IF crops listed in FR 2005 are removed from labels would this study no longer be required**
 - 860.1340/860.1480 – **confirm if waivers were accepted and requirements satisfied**
