**PRECAUTIONARY STATEMENTS  
HAZARDS TO HUMANS AND DOMESTIC ANIMALS  
CAUTION**

Harmful if swallowed, inhaled or absorbed through the skin. Avoid contact with skin, eyes or clothing. Avoid breathing vapor or spray mist. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse. People and pets may enter treated area after application has dried.

**FIRST AID**

Have the product container or label with you when calling poison control or doctor, or going for treatment.

**If Swallowed:** Immediately call a poison control center or doctor. Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give liquid to the person. Do not give anything by mouth to an unconscious person.

**If Inhaled:** Move person to fresh air. If Person is not breathing, call 911 or ambulance, then give artificial respiration, preferably mouth-to-mouth if possible. Call a poison control center or doctor for further treatment advice.

**If on Skin or Clothing:** Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.

**If In Eyes:** Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

# IMPROVE YOUR TRAPPING RESULTS

TrapRite stations are ideal for both residential and commercial applications, and research shows mice prefer cardboard 5 to 1 over plastic stations. Also, by trapping rodents inside the box using traditional snap traps and glue boards you contain the infestation in an economical and disposable station.

- Sound** - Studies show that rodents prefer cardboard due to its sound dampening qualities.
- Whiskers** - Our unique tunnel shape allows rodent whiskers to touch both sides of the box, relaxing them and increasing the chance that they will enter.
- Temperature** - Cardboard is preferred by rodents in hot or cold environments, increasing rodent acceptance and improving trapping results.
