Re: TRI Threshold Calculations
Safety-Kleen (Bartow), Inc.
EPA ID # FLD 980 729 610

Dear Mr. Velez:

Safety-Kleen (Bartow), Inc. (SK) operates a hazardous waste container and tank storage facility at this location. Operations include hazardous waste non-fuels containers-in/containers-out; hazardous waste fuels blending; and hazardous waste solvent recovery.

The materials managed as containers-in/containers-out are stored in the RCRA permitted warehouses until tanker or box trailer loads are accumulated. The accumulated containers are loaded into the box trailer or bulked and pumped into the tanker and shipment off-site for treatment and disposal at a RCRA permitted hazardous waste disposal facility.

The materials managed as solvent recovery arrive in containers and tanker trucks. These materials are pumped into our distillation units, refined, pumped into storage tanks, and sold as commercial products.

The materials managed as fuel blend are received in containers and tanker trucks. Materials received in tankers are pumped into RCRA permitted storage tanks, while materials received in containers are stored in a RCRA permitted container storage building until they are pumped into storage tanks. The hazardous waste in the tanks are blended to comply with the permit requirements of the disposal facility. The fuels materials are sold to RCRA permitted hazardous waste boilers or industrial furnaces for burning as a fuel and disposal.

Based upon our understanding of the EPCRA regulations, the materials that move through the facility unchanged, and are
