RE: Notification of Test Results Indicating Levels of Lead Exceeding the
Consumer Product Safety Commission's Interim Enforcement Policy for
Children's Metal Jewelry

Dear Sir or Madam:

Dollar General Corporation is submitting the attached information with respect to laboratory testing that was performed on various items of jewelry and key chains for the purpose of determining the lead content of the products only and not for the purpose of determining impact to health or the environment. These products have all been recalled pursuant to voluntary recalls designed and implemented in cooperation with the Consumer Products Safety Commission.

Dollar General Corporation does not believe that Section 8(e) of the Toxic Substances Control Act requires it to submit this information to the U.S. Environmental Protection Agency (EPA). However, this information is being provided in an abundance of caution and in order to directly provide EPA with information previously provided to the Consumer Products Safety Commission. Portions of the laboratory reports unrelated to the determination of lead content have been redacted or removed, as they are irrelevant for the purpose of any analysis undertaken pursuant to the Toxic Substances Control Act.

Please contact me with any questions regarding this submission.

Sincerely,

Lloyd Davis
SVP Global Supply Chain

Remark:

1. The total lead content of metallic material of the jewelry were conducted (result refer to the protocol page 3-4). Since the total lead content of the metal components exceeded the limit of 600ppm. So that the acid extraction test should be conducted. However, there is not sufficient sample left for further testing. Hence the lab cannot verify the lead content by acid extraction.

EXECUTIVE SUMMARY:

1. The submitted sample demonstrated unsatisfactory performance in the total lead content as per the CPSC metal jewelry test. The test results are shown as follow.

Position		Record
A	Silvery metal "S" charms	276ppm (0.028%)
B	Silvery metal "L" charms	294ppm (0.029%)
C	Silvery metal oval ring	<50ppm (<0.005%)
D	Silvery metal tube on wire	32700ppm (3.27%)
E	Silvery metal screw end of wire	23500ppm (2.35%)
F	Silvery metal stopper at wire end	22600ppm (2.26%)
G	Silvery metal wire	<50ppm (<0.005%)

Desirable: Max. 600ppm. (0.06%)

2. The submitted sample demonstrated the total lead content according to the acid extraction lead test method as below. (Data)

Position		Record
D	Silvery metal tube on wire	771µg
E	Silvery metal screw end of wire	<45µg
F	Silvery metal stopper at wire end	

Desirable: Max. 175 micrograms

REMARK:

1. Due to the limit of the sample and the test requested are not following the CPSC metal jewelry, the test results will be provided as data only.

I Silvery metal large O-ring	<50ppm (<0.005%)
J Silvery metal oval ring chain	<50ppm (<0.005%)

Desirable: Max. 600ppm. (0.06%)

2. The submitted sample A demonstrated the total lead content according to the acid extraction lead test method as below. (Data)

Position	Record
A1 Silvery metal sun charms	44700µg
B1 Silvery metal heart charms	32700µg
C1 Silvery metal large handbag charms	42700µg
D1 Silvery metal medium cross charms	4060µg
E1 Silvery metal large cross charms	7540µg

Desirable: Max. 175 micrograms

REMARKS:

1. Due to the limit of the sample, the sample B was used to conducted the total lead content test only, and did not process the total lead content according to the acid extraction method.
2. The sample A was used to conduct the total lead content according to the acid extraction lead test only.
3. Due to the test requested are not following the CPSC metal jewelry, the test results will be provided as data only.
