Re: **Results of a Rat Oral Developmental Toxicity Study on 1,3,5 Trioxane**

Dear Sir or Madam:

In accordance with the reporting requirements of TSCA Section 8(e), Ultraform Company, a company of BASF and Degussa, hereby submits the results of a rat oral developmental toxicity study on 1,3,5 Trioxane (CAS 110-88-3).

This study shows that this substance causes developmental effects in laboratory animals. Ticona provided a copy of the study (Report No. 97.0791 by HMR Deutschland GmbH) to you on September 25, 1998 (copy of cover letter attached). Ticona GmbH and Ultraform GmbH, both German companies, jointly sponsored the study.

(8EHQ-0998-14279)

The commercial use of this substance is as a monomer for polyacetal resins and as a solid fuel.

This submission contains no confidential business information.

If any further information is required, please contact Dr. Gerald Kirshenbaum, Manager of Product Safety, Ticona, at 908-522-7662.

Sincerely,

Manfred Goettsch

Dear Sir or Madam:

Subject: Results of a Rat Oral Developmental Toxicity Study

In accordance with the reporting requirements of TSCA Section 8(e), Ticona, a member of the Hoechst Group, hereby submits the results of a rat oral developmental toxicity study on 1,3,5 Trioxane (CAS# 110-88-3).

This study shows that this substance causes developmental effects in laboratory animals. A copy of the study is enclosed (Report Number 97.0791 by HMR Deutschland GmbH). The study was jointly sponsored by Ticona GmbH and Ultraform GmbH.

The commercial use of this substance is as a monomer for polyacetal resins, a solid fuel, in paint stripper formulations and in special adhesive systems.

This submission contains no confidential business information.

If any further information is required, please contact Dr. Gerald Kirshenbaum, Manager, Product Safety at 908-522-7662.

Sincerely,

Richard G. Hanlon
Vice President
