Re: 1-bromo-2,2-difluoroethane: CASRN 359-07-9

Dear 8(e) Coordinator:

hereby submits the following information under Section 8(e) of the Toxic Substance Control Act. While the submitter does not necessarily believe the information indicates a significant risk of injury to health or the environment, EPA guidance seems to indicate that these effects in laboratory animals should be reported to the Agency.

Three female Fischer 344 rats were given a single dose of 2000 mg/kg by oral gavage of the test material. All three females demonstrated incoordination on the day of dosing but appeared normal for the rest of the two-week observation.

Questions concerning these findings may be directed to the undersigned.
