Generic Name: isothiazoleamide analog

Chemical Name: []

CAS Number: None known

Company ID Code: []

Test: Rat acute oral toxicity

MR 31350

Company Sanitized

[] received results of a rat acute oral toxicity study. Rats dosed orally at 50 mg/kg were all dead within 30 minutes of testing. A second group, dosed at 25 mg/kg, were all killed due to toxicity within 30 minutes. A third group was dosed at 5 mg/kg, with two males and two females killed due to toxicity within one hour and moderate toxicity in survivors.

This substance is under evaluation as a pesticide currently only used in small quantities by technically qualified laboratory personnel.

[] considers the specific chemical identity and code number of this substance confidential business information. Disclosure of the link between our company and this notice will provide the public and competitors with information that would be detrimental to our competitive position. Substantial measures have been taken to prevent public disclosure to anyone other than company personnel, limited government disclosures, and other persons under contract to us, that we even have a compound which has reached this stage of development. The disclosure of our company's identity as a submitter of this information would alert our competition as to the status of our research program and, therefore, significantly affect any marketing advantage that we possess. Because we are pursuing possible registration of this material, any disclosure of the chemical identity will also result in substantial harm to our competitive and proprietary position. [] also claims the names of our employees, and the name and location of our research facility as

STUDY NUMBER: AR6887 PRODUCT TOXICOLOGIST: []

SPONSOR TOXICOLOGY MANAGER: SPONSOR: []

BRIEF DESCRIPTION OF THE FINDING(S) FOR CONSIDERATION

TTT performed at 50mg/kg, all animals found dead within 30 minutes
Second group dosed at 25mg/kg, all animals killed due to toxicity within 30 minutes.
Third group dosed at 5mg/kg, two males and two females killed due to toxicity within 1 hour. Moderate toxicity in survivors.

DATA SUBMITTED FOR CONSIDERATION BASED ON: 1

1. **New toxicological finding for test material**
2. **Previously established toxicological finding for test material but potentially referable because it is observed:-**
 - at a lower dose level than previously reported
 - after a shorter exposure period than previously reported
 - after a shorter latent period than previously reported
 - increased incidence or severity than previously reported
 - in a different species than previously reported
 - in a different strain than previously reported
 - in a different sex than previously reported
 - in a different generation than previously reported
 - via a different route of administration than previously reported

Indicate the category(s) as appropriate.
