Dear Sir/Madam:

Re: TSCA Section 8(e) Notification

is submitting to the EPA this notification in accordance with TSCA Section 8(e) and EPA's Statement of Interpretation and Enforcement Policy 43, Fed. Reg. 1110 (March 16, 1978). Acute Neurotoxicity Screening Studies were performed on two alkyl triphenyl phosphate materials. is currently modifying the processes by which these materials are made. The process modifications are designed to enhance the quality of these materials and decrease impurity levels. In order to assess the degree of success with the modifications, conducted the acute neurotoxicity studies. The results of these studies showed a greater than 70% inhibition of NTE for both materials. Since process changes are envisioned, we anticipate that additional neurotoxicity screening studies will be performed in the future.

neurotoxicity - esterase

Sincerely,

Richard T. Henrich
Principal Toxicologist
