Attn: Terry R. O'Bryan

COMPANY SANITIZED

Dear Mr. O'Bryan:

This letter contains further information on the earlier TSCA 8(e) submission which you have given the document control number of 8EHQ-0694-13069.

While the original submission was made based on an unaudited draft report, and as there were no significant differences in the final report, your Mr. Richard Hester has verbally advised that this letter will suffice to confirm to you that the final report is complete and that there are no changes to the conclusions made in the draft report. The final report would be available to you upon request.

Your acknowledgement of this 8(e) submission did ask for further clarification. The requested product composition information is provided on the attached pages and must be considered by you as Confidential Business information. This information must not be conveyed outside your office without my specific written approval. A sanitized version of this letter and the attachments is provided for your public files.

Your other request was for the voluntary actions we took in response to the findings. This new information caused us to review and revise as appropriate all safety type information on this product including the label text, the msds statements, and the internal warning systems in our plants.

Regards,

*C. R. Thrash*
