## RCRA/SUPERFUND HOTLINE MONTHLY SUMMARY

AUGUST 85

### Minimum Technological Requirements

4. Section 3004(o)(5)(B) of the Solid Waste Disposal Act, as amended, provides that the requirements for the installation of two or more liners may be satisfied by the interim statutory design presented. This design includes "a top liner designed, operated, and constructed of materials to prevent the migration of any constituent into such liner during the period such facility remains in operation (including any post-closure monitoring period)..." Should the liner meet the §3004(o)(5)(B) criteria for the operating life of the particular unit or of the entire facility?

The design, construction, and operation of the liners should prevent the migration of hazardous waste constituents into the top liner and through the lower liner as long as the particular unit remains in operation. The operating period includes any postclosure monitoring period of the specific landfill or surface impoundment unit.
