

2. Does a waste pile which is leaking a hazardous leachate into the ground need ground-water monitoring?

The question required input from several individuals with the resulting answer:

If the o/o filed under interim states as a waste pile (40 CFR 265 only covers treatment or storage) then he is out of compliance with Part 265.253 and also 265.15(c). He can either take remedial action to come into compliance or modify his Part A and become a land treatment or disposal facility at which point ground-water monitoring would be required.
