

**EPA to Review Cleanup at  
Teledyne Wah Chang Superfund Site  
We Invite Your Comments Through August 30, 2007**

The U.S Environmental Protection Agency (EPA) is doing the third Five-Year Review of the Teledyne Wah Chang Superfund Site in Millersburg, Oregon. EPA is required to review the cleanup decision every five years. The review checks to make sure the remedy that is in place protects people and the environment. The remedy was a combination of soil excavation, installing a system to extract and treat contaminated groundwater, and land use restrictions. Groundwater is being monitored by Teledyne Wah Chang. EPA reviews this monitoring data to make sure the extraction and treatment system is effective, and that, where appropriate, natural processes are breaking down groundwater contaminants to meet EPA cleanup standards.

EPA welcomes your participation. If you have information that may help EPA with the review, or any concerns you would like to share about the site, contact Ravi Sanga, EPA Project Manager, at 206-553-4092, or toll-free at 800-424-4372, x4092. Email: [sanga.ravi@epa.gov](mailto:sanga.ravi@epa.gov). TTY users may call the Federal Relay Service at 800-877-8339 and give the operator Ravi Sanga's phone number.

The Teledyne Wah Chang site is listed on EPA's National Priorities List of the nation's most contaminated hazardous waste sites. The site was contaminated by wastes from a metals production plant. Contaminants include radionuclides and volatile organic compounds, which impacted site groundwater, sediments, and soils. Cleanups took place during the mid and late 1990s.
