To Envirocon Environmental

In regards to Terminal 4 Wheeler Bay Stabilization of our haul trucks leaving Waste Connection's Subtitle D Landfill in Wasco, decontamination consisted of pressurized water. Decontaminated waste water was absorbed with Boiler Ash at washout area contained within the Wasco County Landfill.

This protocol was adhered to for all trucks transporting impacted soil-debris from the Wheeler Bay Project.

Thanks

Todd Embury

Re: Decontamination Report  
Envirocon Equipment

Dear Mr. Clough:

During the Terminal 4 Wheeler Bay Stabilization Project Envirocon utilized a dry-type equipment decontamination for all Envirocon owned or rented equipment that contacted impacted soil per Envirocon CHASP. Before leaving the site, all equipment was inspected and deemed free of soil.

Sincerely,
