

Article XX, § 532 DRY CLEANING FACILITIES (effective January 1, 1982)

- A. Emissions of perchloroethylene from any dry cleaning facility shall be vented through a properly functioning condenser or carbon adsorption system.
- B. In addition, such dry cleaning facilities shall comply with the following:
 - 1. Diatomaceous earth filters shall be cooked or otherwise treated so that the residue contains no more than 25 percent by weight of volatile organic compounds;
 - 2. Wet waste material from all solvents stills shall be reduced to no more than 60 percent by weight of volatile organic compounds;
 - 3. All filtration cartridges shall be drained in the filter housing for a minimum of 24 hours before being discarded; and
 - 4. Any component, including hose connections, valves, machine door gaskets, pumps, storage containers, water separators, filter sludge recovery units, distillation units, cartridge filters, and lint depositories found to be leaking volatile organic compounds shall be replaced or repaired within 24 hours of discovery of the leak.
- C. **Compliance Schedule.** Compliance with this section shall be achieved in accordance with the schedule [final compliance date: July 1, 1982] set forth in Section 512 of this Article.
- D. **Measurements.** Measurements relating to this Section shall be performed according to the applicable procedures established by Section 605.H. (Article XXI, §2107.04) of this Article.
