Project Summary for an Application from
Selig Sealing Products for Construction Permit and Revision of the
Federally Enforceable State Operating Permit (FESOP) for
342 East Wabash
Forrest, Illinois 61741

Site Identification No.: 105045AAJ
Application No.: 07120049 and 95120137

Schedule

Public Comment Period Begins: May 7, 2008
Public Comment Period Closes: June 6, 2008

Permit Analyst: George Kennedy
Community Relations Coordinator: Brad Frost

I. INTRODUCTION

Selig Sealing Products has applied for a Construction Permit and revision of its Federally Enforceable State Operating Permit (FESOP) for its Forrest Illinois plant. This plant requires an air pollution control operating permit because it is a source of emissions. The Illinois EPA has prepared a draft of these permits that it would propose to issue for the plant. However, before issuing these permits, the Illinois EPA is holding a public comment period to receive comments on these proposed actions and the terms and conditions of the draft permits that it would propose to issue.

II. SOURCE DESCRIPTION

Selig Sealing Products manufactures heat sealable safety lids used in food, dairy and pharmaceutical industries. The emission units at this plant that require an operating permit include extruders, laminating stations, flexographic printing stations fuel combustion units, and storage silos. These units are sources of emissions because of the volatile organic material contained in the coating and printing processes.

Selig Sealing Products by way of Construction Permit application is requesting construction of one laminating station including flexographic printing station and coating station, and associated natural gas fired dryer.

III. GENERAL DISCUSSION

Federally Enforceable State Operating Permits (FESOPs) are federally enforceable, that is, the terms and conditions of the permits can be enforced by USEPA under federal law, as well as by Illinois government and the public under state law. These permits can establish federally enforceable limitations on the operation and emissions of a source that restrict the potential emissions of the source.

The source has been operating this plant under a FESOP because the actual emissions of the plant are below the levels at which the plant would be considered a major source under Title V of the federal Clean Air Act. However, in the absence of federally enforceable limitations, the plant's potential emissions would be such that the plant would be considered a major source. The permit acts to restrict the plant potential emissions so that it need not be considered a major source. As a result, the source does not need not obtain a Clean Air Act Permit Program (CAAPP) permit for the plant, as would otherwise be required.

The FESOP limits the operation and annual emissions of the plant, including emissions associated with this Construction Permit, to below the major-source-thresholds of 100 tons for VOM, 10 tons for an individual HAP and 25 tons for combined HAPs.

IV. APPLICABLE EMISSION STANDARDS

All emission units in Illinois must comply with state emission standards adopted by the Illinois Pollution Control Board. These emission standards represent the basic requirements for sources in Illinois. 35 Ill. Adm. Code 215.204(c) specifies the volatile organic material allowed in paper coating materials. 35 Ill. Adm. Code 215.301 specifies limits of organic material discharge into the atmosphere from any emission source. The application shows that the plant is in compliance with applicable state emission standards.

V. CONTENTS OF THE PERMIT

The Construction Permit and Revised FESOP that the Illinois EPA is proposing to issue would continue to identify the specific emission standards that apply to the emission units at the plant. As explained, the coating and printing operations are subject to 35 Ill. Adm. Code 215.204(c), and 215.301, which limits volatile organic materials in coatings and volatile organic materials into the atmosphere. The conditions of this permit are intended to ensure that the source continues to comply with applicable emission standards.

The permits would also contain limitations and requirements to assure that this plant is operated as a non-major source. The permit would limit the operation and annual emissions of the plant to below the major-source-thresholds of 100 tons for VOM, 10 tons for an individual HAP and 25 tons for combined HAPs.

The permits conditions would also continue to require appropriate compliance procedures, including inspection practices as well as recordkeeping and reporting requirements. The source must carry out these procedures on an on-going basis to demonstrate that the plant is being operated within the limitations set by the permit and the plant's emissions are being properly controlled.

VI. REQUEST FOR COMMENTS

It is the Illinois EPA's preliminary determination that the source has met the requirements for above permits. The Illinois EPA is therefore proposing to renew the permit.

Comments are requested on this proposed action by the Illinois EPA and the proposed conditions on the draft permit. If substantial public interest is shown in this matter, the Illinois EPA will consider holding a public hearing in accordance with 35 IAC Part 166.
