Project Summary for an Application from
Tempo Graphics, Inc. for Renewal of
Federally Enforceable State Operating Permit (FESOP)
455 East North Avenue
Carol Stream, Illinois

Site Identification No.: 043020ABI
Application No.: 86110033

Schedule

Public Comment Period Begins: July 24, 2008
Public Comment Period Closes: August 23, 2008

Permit Analyst: George Kennedy
Community Relations Coordinator: Brad Frost

I. INTRODUCTION

Tempo Graphics, Inc. has applied for Renewal to their Federally Enforceable State Operating Permit (FESOP) for Plant located at Carol Stream, Illinois. This plant requires an air pollution control operating permit because it is a source of emissions. The Illinois EPA has prepared a draft of this permit that it would propose to issue for the plant. However, before issuing the permit, the Illinois EPA is holding a public comment period to receive comments on this proposed action and the terms and conditions of the draft permit that it would propose to issue.

II. SOURCE DESCRIPTION

Tempo Graphics, Inc. is a facility that operates include three heatset web offset presses controlled by thermal oxidizer, two non-heatset offset presses and support equipment. These units are sources of emissions because the printing inks and associated printing solutions contain solvents which contain volatile organic material (VOM) which is emitted to the atmosphere during the printing process.

III. GENERAL DISCUSSION

Federally Enforceable State Operating Permits are federally enforceable, that is, the terms and conditions of the permits can be enforced by USEPA under federal law, as well as by Illinois government and the public under state law. These permits can establish federally enforceable limitations on the operation and emissions of a source that restrict the potential emissions of the source.

The source is to operate this plant under the FESOP because the actual emissions of the plant are below the levels at which the plant would be considered a major source under Title V of the federal Clean Air Act. However, in the absence of federally enforceable limitations, the plant's potential emissions would be such that the plant would be considered a major source. The permit acts to restrict the plant potential emissions so that it need not be considered a major source. As a result, the source does not need to obtain a Clean Air Act Permit Program (CAAPP) permit for the plant, as would otherwise be required.

The FESOP limits the operation and annual emissions of the plant to below the major-source-thresholds of 100 tons for VOM and 100 tons for PM, 10 tons for an individual HAP and 25 tons for combined HAPs.

IV. APPLICABLE EMISSION STANDARDS

All emission units in Illinois must comply with state emission standards adopted by the Illinois Pollution Control Board. These emission standards represent the basic requirements for sources in Illinois. There are specific regulations for testing of air pollution control equipment for both VOM. This permit requires compliance with these regulations.

V. CONTENTS OF THE PERMIT

The permit that the Illinois EPA is proposing to issue would identify the specific emission standards that apply to the emission units at the plant. As explained, the VOM is subject to 35 Ill. Adm. Code 218.407, which requires limiting VOM content of the fountain solution and afterburner installation; and 218.204 which limits VOM in coatings. The conditions of this permit are intended to ensure that the source comply with applicable emission standards. This Permit also contains regulation 35 Ill. Adm. Code 201.282 which subjects every emission source or air pollution control equipment to testing requirements.

The permit would also contain limitations and requirements to assure that this plant is operated as a non-major source. The permit would limit the operation and annual emissions of the plant to below the major-source-thresholds of 100 tons for VOM and PM, 10 tons for an individual HAP and 25 tons for combined HAPs.

The permit conditions would also require appropriate compliance procedures, including inspection practices as well as recordkeeping and reporting requirements. The source must carry out these procedures on an on-going basis to demonstrate that the plant is being operated within the limitations set by the permit and the plant's emissions are being properly controlled.

VI. REQUEST FOR COMMENTS

It is the Illinois EPA's preliminary determination that the source has met the requirements for renewal of its permit. The Illinois EPA is therefore proposing to renew the permit.

Comments are requested on this proposed action by the Illinois EPA and the proposed conditions on the draft permit. If substantial public interest is shown in this matter, the Illinois EPA will consider holding a public hearing in accordance with 35 IAC Part 166.
