Project Summary for an Application from  
Advocate Illinois Masonic Medical Center for a  
Federally Enforceable State Operating Permit (FESOP) RENEWAL for  
836 West Wellington Avenue  
Chicago, Illinois

Site Identification No.: 031600DAU  
Application No.: 73040048

Schedule

Public Comment Period Begins: November 11, 2010

Public Comment Period Closes: December 11, 2010

Illinois EPA Contacts

Permit Analyst: George Kennedy

Community Relations Coordinator: Brad Frost

**I. INTRODUCTION**

Advocate Illinois Masonic Medical Center has applied for a Federally Enforceable State Operating Permit (FESOP) Renewal for its Chicago location. This facility requires an air pollution control operating permit because it is a source of emissions. The Illinois EPA has prepared a draft of this permit that it would propose to issue for the facility. However, before renewing the permit, the Illinois EPA is holding a public comment period to receive comments on this proposed action and the terms and conditions of the draft permit that it would propose to issue.

**II. SOURCE DESCRIPTION**

Advocate Illinois Masonic Medical Center is medical facility. The emission units at this plant that require an operating permit include boilers, generators, and storage tanks. These units are sources of emissions because of fuel combustion mainly of natural gas, and diesel fuel. These emissions include Nitrogen Oxides, Carbon Monoxide, Sulfur Dioxide, and Volatile Organic Material.

**III. GENERAL DISCUSSION**

Federally Enforceable State Operating Permits (FESOPs) are federally enforceable, that is, the terms and conditions of the permits can be enforced by USEPA under federal law, as well as by Illinois government and the public under state law. These permits can establish federally enforceable limitations on the operation and emissions of a source that restrict the potential emissions of the source.

The source is requesting to continue operating this facility under a FESOP because the actual emissions of the plant are below the levels at which the plant would be considered a major source under Title V of the federal Clean Air Act. However, in the absence of federally enforceable limitations, the plant's potential emissions would be such that the plant would be considered a major source. The permit acts to restrict the plant potential emissions so that it need not be considered a major source. As a result, the source does not need not obtain a Clean Air Act Permit Program (CAAPP) permit for the plant, as would otherwise be required.

The FESOP limits the operation and annual emissions of the plant to below the major-source-thresholds of 100 tons for Nitrogen Oxides, Carbon Monoxide, Sulfur Dioxide, and Volatile Organic Material.

**IV. APPLICABLE EMISSION STANDARDS**

All emission units in Illinois must comply with state emission standards adopted by the Illinois Pollution Control Board. These emission standards represent the basic requirements for sources in Illinois. Illinois regulations limit sulfur content in fuel oil used in boilers, carbon monoxide, particulate matter and volatile organic material into the atmosphere. The application shows that the facility is in compliance with applicable state and federal emission standards.

**V. CONTENTS OF THE PERMIT**

The permit that the Illinois EPA is proposing to issue would identify the specific emission standards that apply to the emission units at the facility.

The boilers must comply with 35 Ill. Adm. Code 216.121 and 214.122(b)(1) and (2). Section 216.121 requires boilers to not exceed a carbon dioxide emission of 200 ppm, corrected to 50 percent excess air. Section 214.122(b)(2) requires each fuel combustion emission source not to exceed a sulfur dioxide emission of 0.3 and 1.0 lbs per mmBtu when burning #2 fuel oil. Boilers are also subject to federal regulation 40 CFR 60 Subpart Dc "New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units.

The storage tanks must comply with 35 Ill. Adm. Code 218.122(b) to be equipped with submerged loading pipe or equivalent device.

The permit would also contain limitations and requirements to assure that this plant is operated as a non-major source. The permit would limit the operation and annual emissions of the facility to below the major-source-thresholds of 100 tons for Nitrogen Oxides, Carbon Monoxide, Sulfur Dioxide and Volatile Organic Material.

The permit conditions would also require appropriate compliance procedures, including inspection practices as well as recordkeeping and reporting requirements. The source must carry out these procedures on an on-going basis to demonstrate that the plant is being operated within the limitations set by the permit and the plant's emissions are being properly controlled.

**VI. REQUEST FOR COMMENTS**

It is the Illinois EPA's preliminary determination that the source has met the requirements for this permit. The Illinois EPA is therefore proposing to issue this permit.

Comments are requested on this proposed action by the Illinois EPA and the proposed conditions on the draft permit. If

substantial public interest is shown in this matter, the Illinois EPA will consider holding a public hearing in accordance with 35 IAC Part 166.
