Re: Sorenson Engineering, Inc. (Facility ID 36738); Additional Signed Forms and Comments for Draft Title V Permit Renewal.

Enclosed are the signed form 500-A2 and form 500-C1 (see **Attachment 1**), submitted on behalf of Sorenson Engineering, Inc. located at 32032 Dunlap Boulevard in Yucaipa ("facility"). JECISI has reviewed the draft Title V permit and although no comments are being made to the draft permit for renewal, it appears that the requested changes made by Kimberly Holden, in an email sent to the district on 10 April 2013 (see **Attachment 2**), have not yet been addressed. The automated chemical deburring lines (AN 514135, AN 523064), gold plating line (AN 523065), and air pollution control devices (AN 523070, AN 523072, AN 523073) are still listed as permits to construct. The requested changes, from the 10 April 2013 email, are necessary before the permit to construct can be converted into a permit to operate.

Please call me or Bruce with any questions or comments.

Sincerely,

Eduardo Jimenez

PROCEDURES FOR DETERMINING COMPLIANCE STATUS

- 1. Equipment verification: Review the list of pending applications, and either the preliminary Title V facility permit or the list of current permits to operate that the AQMD provided you, to determine if they completely and accurately describe all equipment operating at the facility. Attach a statement to describe any discrepancies.
2. Identify applicable requirements*: Use the checklist in Section II to identify all applicable and federally-enforceable local, state, and federal rules and regulations, test methods, and monitoring, recordkeeping and reporting (MRR) requirements that apply to any equipment or process (including equipment exempt from a permit by Rule 219) at your facility.
3. Identify additional applicable requirements*: Use Section III to identify any additional requirements not found in Section II. Section II is not a complete list of all applicable requirements.
4. Identify any requirements that do not apply to a specific piece of equipment or process: Also use Section III to identify any requirements that are listed in Section II but that do not apply to a specific piece of equipment or process.
5. Identify SIP-approved rules that are not current AQMD rules: Use Section IV to identify older versions of current AQMD rules that are the EPA-approved versions in the State Implementation Plan (SIP), and that are still applicable requirements as defined by EPA.
6. Identify Local-Only Enforceable Regulatory Requirements: Use Section V to identify AQMD rules that are not SIP-approved and are not federally enforceable.
7. Determine compliance: Determine if all equipment and processes are complying with all requirements identified in Sections II and III.

* The following AQMD rules and regulations are not required to be included in Section II and do not have to be added to Section III: Regulation I, List and Criteria in Regulation II, Rule 201, Rule 201.1, Rule 202, Rule 203, Rule 205, Rule 206, Rule 207, Rule 208, Rule 209, Rule 210, Rule 212, Rule 214, Rule 215, Rule 216, Rule 217, Rule 219, Rule 220, Rule 221, Regulation III, Regulation V, Regulation VIII, Regulation XII, Regulation XV, Regulation XVI, Regulation XIX, Regulation XXI, Regulation XXII, and Regulation XXX.

** Emission units adversely affected by the gap between current and SIP-approved versions of rules may initially be placed in a non-Title V portion of the permit

Section III - Supplemental Identification of Specific Requirements

Complete this section only if there is a specific requirement (i.e., rule reference, test method, or MRR requirement) that is:

1. Listed for a specific type of equipment or process in Section II of this form & DOES NOT pertain to a specific device at your facility; OR,
2. Is NOT Listed for a specific type of equipment or process in Section II of this form but it IS applicable to a specific device at your facility.

NOTES:

1. For any specific requirement, test method, or MRR requirement that is identified as "Remove," attach additional sheets to explain the reasons why the specific requirement does not pertain to the device listed.
2. All boxes that are checked in Section II and any additional requirements identified in this section as "Add" will be used to determine the facility's compliance status. This information will be used to verify the certification statements made on Form 500-A2.
3. Do not use this section to identify equipment that is exempt from specific rule requirements. Your equipment is automatically considered to be in compliance with the rule that specifically exempts the equipment from those requirements.
4. Listing any requirement that does not apply to a specific piece of equipment in this section will not provide the facility with a permit shield unless one is specifically requested by completing Form 500-D and approved by the AQMD.

* If this section is completed as part of the initial Title V application & there is no device number assigned, refer to the existing permit or application number in this column.

Subject: SORE213092_Addendum to Open PTCs and Request for Conversion to PTOs - Sorenson Engineering
Attachments: 9 files [IRB 4-8-2013].ZIP
Importance: High

Please accept this correspondence as a request for changes to permits to construct and conversion to permits to operate submitted on behalf of Sorenson Engineering; the information provided in this request supersedes the previously submitted addendum sent to your attention via email on 8 May 2012. In addition to addressing subsequent chemical and material changes since the submittal of the May 2012 addendum, this addendum addresses issues that were previously noted; however, to facilitate your review and avoid comparison with prior addendums, the previous requests have again been noted so that this request can be compared with the permits to construct in its entirety.

During the installation, set-up, and initial testing of the new gold plating line (AN 523065) and chemical deburring line (AN 523064), some changes to chemical suppliers have occurred resulting in changes to the tank chemistries as initially proposed in the application for permit to construct. The following files are attached to summarize the changes to the respective lines and assist the district with the comparison of the changes and the emissions calculations:

- a. Updated tank schedules for the gold plating (GP) and chemical deburring (CDB) lines, identifying maximum weight percentages for each material.
- b. Summary of changes to the GP and CDB lines, with the noted changes in red.
- c. Summary of emissions comparisons based on tank changes.
- d. Modifications to SCAQMD calcs for Deburring Line (Excel file containing emissions calculations based on maximum operating parameters).
- e. Modifications to SCAQMD calcs for Gold Plating Line (Excel file containing emissions calculations based on maximum operating parameters).
- f. Summary of Measured Parameters for Tank Lines.
- g. Compiled MSDSs for CDB Line.
- h. Compiled MSDSs for GP Line.
- i. Compilation of information for NOx scrubber.

To assist the district with the evaluation, updated calculations spreadsheets for each line were prepared using the initial calculations sheets as previously provided by SCAQMD. The changes to concentrations and materials have been noted in green in the spreadsheet. Please note, tank specific exhaust rates for each tank have been included in the calculations spreadsheets. The summary of the changes in emissions between those calculated for the permits to construct and those calculated based on the changes to tank lines has also been included for your reference. Representative Material Safety Data Sheets for the materials used in each line have also been attached for your reference.

In addition, the following discrepancies or contradictions were noted with the permits to construct:

1. Gold Plating Line (AN 523065):
 - a. The equipment description is not specific regarding tanks 9, 10, 11, and 12. Per previous email correspondence on 17 August 2011, it was confirmed that these tanks are separate tanks with a 150 ampere rectifier, **each**; however, the description in the permit to construct lists the tanks together on one line and does not specify that they each have a rectifier.

- b. Despite the fact that the description lists that tank 15a is heated, condition 7 references ambient temperatures for both tanks 15 and 15a when listing the maximum chemical constituents. Tank 15a is heated and will have a maximum temperature of 115F.
- c. Condition 10(B) requires that a log be maintained with the concentration in percent by weight of total nickel in tanks 9A, 10, 10A, 11, 11A, 12, and 12A determined each month by quantitative chemical analysis; however, the manufacturer's monitoring system associated with the line is designed such that concentrations are monitored by percent volume. The facility closely monitors the tank parameters including pH, degrees Baume, ppm, and percent by volume of each material due to the effect that the chemicals can have on the parts. Furthermore, general titrations to maintain desired concentration levels are performed by volumetric analysis, using titrate indicators. Based on the measured parameters and as a result of chemical depletion and drag-out, the facility may add additional materials to the tanks to maintain the desired chemistry. Though this addendum has presented the maximum percent of each chemical by weight, the tanks will remain in compliance with the weight percents as listed in this addendum as long as the chemical additions are within the listed parameters as monitored by the facility. Attached is the summary of the parameters as monitored by the facility and entered into the software. Please consider this a request for change of condition such that the condition will allow for the log of monthly monitoring and records of additions based on tank parameters actually measured instead of the requirement to perform calculations demonstrating the weight percent of each material.

2. Automated Chemical Deburring Line (AN 523064):

- a. Condition 7 limits the quantity of nitric acid used to 62.5 gallons per month; however, the method for determining the quantity of nitric acid usage (and subsequent compliance with the condition) is confusing: "determined from the total volume, weight percent of nitric acid, and the nitric acid concentration in the hazardous waste". It is suggested that more detail is provided regarding the actual calculations required for determining compliance and how the concentration of hazardous waste is obtained.
- b. Similar to condition 10 of the gold plating line, condition 8(A) requires a log to be maintained with the concentration in percent by weight of the compounds listed in condition No. 6, where concentrations are measured at least once a month; however, as previously mentioned, the manufacturer monitoring system associated with the line is not designed to perform such calculations for concentrations in percent by weight. Please consider this a request for change of condition such that the condition will allow for the log of monthly monitoring and records of additions based on tank parameters actually measured instead of the requirement to perform calculations demonstrating the weight percent of each material.

3. Air Pollution Control System No. 3, NOx Scrubber (AN 523073):

Condition 9 states the following: *The oxidation/reduction potential of the scrubbing solution shall not be less than 350 millivolts.* As currently written, the condition implies that the oxidation/reduction potential (ORP) value is positive. Per the manufacturer specifications originally provided with the initial application for this device, the scrubber liquid medium, sodium hydrogen sulfide, is utilized as an ORP control to be maintained at -350 millivolts. It is suggested that the negative value of the ORP be explicitly stated in the condition for accuracy to the manufacturer operating parameters as indicated under the application for which the equipment was submitted. A compilation of supporting information for the NOx scrubber as submitted during review of the initial application has been attached for your reference.

Please review the information presented and attached herein, grant the changes of conditions and updates to the permits as requested, and proceed with converting the permits to construct to permits to operate.

Please contact me or Bruce with any questions.

The SCAQMD is required by state law, the California Environmental Quality Act (CEQA), to review discretionary permit project applications for potential air quality and other environmental impacts. This form is a screening tool to assist the SCAQMD in clarifying whether or not the project¹ has the potential to generate significant adverse environmental impacts that might require preparation of a CEQA document [CEQA Guidelines §15060(a)].² Refer to the attached instructions for guidance in completing this form.³ For each Form 400-A application, also complete and submit one Form 400-CEQA. If submitting multiple Form 400-A applications for the same project at the same time, only one 400-CEQA form is necessary for the entire project. If you need assistance completing this form, contact Permit Services at (909) 396-3385 or (909) 396-2668.

¹ Cleaning and painting activities qualify as trivial if they are not subject to VOC or HAP control requirements. Asphalt batch plant owners/operators must still get a permit if otherwise required.

² "Moved by hand" means it can be moved without the assistance of any motorized or non-motorized vehicle, conveyance or device.

³ Brazing, soldering and welding equipment, and cutting torches related to manufacturing and construction activities that emit HAP metals are more appropriate for treatment as unpermitted equipment. Brazing, soldering, welding and cutting torches directly related to plant maintenance and upkeep and repair or maintenance shop activities that emit HAP metals are treated as trivial and listed separately in this appendix.

⁴ Many lab fume hoods or vents might qualify for treatment as unpermitted equipment.

⁵ Exemptions for storage tanks containing petroleum liquids or other volatile organic liquids should be based on size limits such as storage tank capacity and vapor pressure of liquids stored and are not appropriate for this list.

Form 500-H Title V - Compliance Assurance Monitoring (CAM) Applicability Determination for Initial, Renewal, & Significant Permit Revision

This form is required as part of an initial, significant permit revision, or renewal Title V application. If your Title V facility has control devices in use, the CAM rule may apply. Follow the instructions on the reverse side of this form to determine whether your facility is subject to CAM requirements.

Section I - Operator Information

1. Facility Name (Business Name of Operator That Appears On Permit): Sorenson Engineering, Inc.

2. Valid AQMD Facility ID (Available On Permit Or Invoice Issued By AQMD): 036738

Section II - CAM Status Summary for Emission Units

3. Based on the criteria in the instructions (check one and attach additional pages as necessary):

a. The emission units identified below are subject to the CAM rule¹ and a CAM plan² is attached for each affected emissions unit:

b. There are no emission units with control devices at this Title V facility that are subject to the CAM rule.

Emission Unit ³ (Application, Permit or Device No.)	Equipment Description ⁴	Uncontrolled Emissions		Connected to Control Unit ³ (Application, Permit or Device No.)	Equipment Description ⁴	Controlled Emissions	
		Pollutant	PTE ⁵ (tons/year)			Pollutant	PTE ⁵ (tons/year)

¹ For more detailed information regarding the CAM rule applicability, refer to Title 40, Chapter I, Part 64, Section 64.1 of the Code of Federal Regulations (40 CFR Part 64, Section 64.1). This also can be accessed via the internet at: http://www.access.gpo.gov/nara/cfr/waisidx_99/40cfr64_99.html.

² Only one CAM plan is required for a control device that is common to more than one emissions unit, or if an emissions unit is controlled by more than one control device similar in design and operation. If the control devices are not similar in design and operation, one plan is required for each control device.

³ List all new and existing emission units and the connected control devices either by AQMD application, permit or device number. When the emission unit is new and has not yet been assigned an application number, leave this column blank.

⁴ Provide a brief equipment description of the emission units and control devices by indicating equipment type, make, and model and serial numbers as appropriate.

⁵ Potential to Emit

Instructions for Determining Applicability to the CAM Rule

With the exception of emission units that are municipally-owned backup utility power units as described by 40 CFR Part 64, Section 64.2(b)(2)¹, the CAM rule is applicable to each emission unit (existing and new construction) at a Title V facility that meets ALL of the following criteria²:

1. The emission unit is subject to an emission limitation or standard³ (often found in permit conditions);
2. The emission unit uses a control device to achieve compliance with the emission limitation or standard; and,
3. The emission unit has a potential to emit (PTE)⁴, either pre-control or post-control depending on the type of Title V application⁵, that exceeds or is equivalent to any of Title V major source thresholds shown in the following table:

CAM Potential to Emit (PTE) Emission Threshold⁶ For Individual Emission Units at a Title V Facility (tons per year)			
Pollutant	South Coast Air Basin (SOCAB)	Riverside County Portion of Salton Sea Air Basin (SSAB) and Los Angeles County Portion of Mojave Desert Air Basin (MDAB)	Riverside County Portion of Mojave Desert Air Basin (MDAB)
VOC	10	25	100
NOx	10	25	100
SOx	100	100	100
CO	50	100	100
PM-10	70	70	100
1 HAP ⁷	10	10	10
2+ HAPs	25	25	25

1 The facility must attach the documentation required by 40 CFR Part 64, Section 64.2 (b)(2) to demonstrate that the backup utility power unit only operates during periods of peak demand or emergency situations; and has actual emissions, averaged over the last three calendar years of operation, less than 50% of the major source emission thresholds.

2 Additional information about the CAM rule can be found on EPA's website at <http://www.epa.gov/ttnemc01/cam.html>.

3 Only emission limitations and standards from an "applicable requirement" for emission units with control devices are subject to the CAM rule. Applicable requirements are federally-enforceable requirements that are rules adopted by AQMD or the State that are approved by EPA into the State Implementation Plan (SIP) (i.e. "SIP-approved rules"). Refer to Form 500-C1 for the latest versions of SIP-approved and non-SIP approved rules.

For emissions units with control devices that are subject to following federally enforceable requirements, the CAM rule does NOT apply: 1) NSPS (40 CFR Part 60); 2) NESHAP (40 CFR Parts 61 and 63); 3) Title VI of the Federal Clean Air Act (CAA) for Stratospheric Ozone Protection; 4) Title IV of the CAA and SCAQMD Regulation XXXI for Acid Rain facilities; 5) SCAQMD Regulation XX - RECLAIM; 6) Any emission cap that is federally enforceable, quantifiable, and meets the requirements in 40 CFR Part 70, Section 70.4 (b)(12); and 6) Emission limitation or standards for which a continuous compliance determination method is required.

4 To calculate the pre-control device and post-control device PTE for emission units at the facility, refer to the Title V Technical Guidance Document Version 4 .0, Appendix A (pages A-12 through A-23). The calculations are used to determine the CAM applicability according to 40 CFR Part 64, Section 64.5 of the CAM rule.

5 For Initial Title V or significant permit revision applications submitted after April 20, 1998, use the post-control device PTE emissions to determine CAM applicability. For Title V permit renewal applications (submittals will begin in 2002), the CAM applicability will be based on the pre-control device PTE.

6 The following table is based on Rule 3001 (Amended November 14, 1997) and Rule 3008 (Amended March 16, 2001). Please be advised that the threshold values are subject to change based on rule amendments.

Section I - Operator Information

Sorenson Engineering, Inc.

2. **Valid AQMD Facility ID** (Available On Permit Or Invoice Issued By AQMD):
036738

PROCEDURES FOR DETERMINING COMPLIANCE STATUS

- Equipment verification:** Review the list of pending applications, and either the preliminary Title V facility permit or the list of current permits to operate that the AQMD provided you, to determine if they completely and accurately describe all equipment operating at the facility. Attach a statement to describe any discrepancies.
- Identify applicable requirements*:** Use the checklist in Section II to identify all applicable and federally-enforceable local, state, and federal rules and regulations, test methods, and monitoring, recordkeeping and reporting (MRR) requirements that apply to any equipment or process (including equipment exempt from a permit by Rule 219) at your facility. The potential applicable requirements, test methods and MRR requirements are identified and listed adjacent to each given equipment/process description. Check off each box adjacent to the corresponding requirement as it applies to your particular equipment/process.
Note: Even if there is only one piece of equipment that is subject to a particular requirement, the appropriate box should be checked.
- Identify additional applicable requirements*:** Use Section III to identify any additional requirements not found in Section II. Section II is not a complete list of all applicable requirements. It does not include recently adopted NESHAP regulations by EPA or recent amendments to AQMD rules. Do not add rules listed in Section V here.
- Identify any requirements that do not apply to a specific piece of equipment or process:** Also use Section III to identify any requirements that are listed in Section II but that do not apply to a specific piece of equipment or process. Fill out Section III of this form and attach a separate sheet to explain the reason(s) why the identified rules do not apply. Note: Listing any requirement that does not apply to a specific piece of equipment will not provide the facility with a permit shield unless one is specifically requested by completing Form 500-D and is approved by AQMD.
- Identify SIP-approved rules that are not current AQMD rules:** Use Section IV to identify older versions of current AQMD rules that are the EPA-approved versions in the State Implementation Plan (SIP), and that are still applicable requirements as defined by EPA. The facility is not required to certify compliance with the items checked in Section IV provided that the non-SIP approved rule in Section II is at least as stringent as the older SIP-approved version in Section IV. **
- Identify Local-Only Enforceable Regulatory Requirements:** Use Section V to identify AQMD rules that are not SIP-approved and are not federally enforceable.
- Determine compliance:** Determine if all equipment and processes are complying with all requirements identified in Sections II and III. If each piece of equipment complies with all applicable requirements, complete and attach Form 500-A2 to certify the compliance status of the facility. If any piece of equipment is not in compliance with any of the applicable requirements, complete and attach Form 500-C2 in addition to Form 500-A2.

* The following AQMD rules and regulations are not required to be included in Section II and do not have to be added to Section III: Regulation I, List and Criteria in Regulation II, Rule 201, Rule 201.1, Rule 202, Rule 203, Rule 205, Rule 206, Rule 207, Rule 208, Rule 209, Rule 210, Rule 212, Rule 214, Rule 215, Rule 216, Rule 217, Rule 219, Rule 220, Rule 221, Regulation III, Regulation V, Regulation VIII, Regulation XII, Regulation XV, Regulation XVI, Regulation XIX, Regulation XXI, Regulation XXII, and Regulation XXX.

** Emission units adversely affected by the gap between current and SIP-approved versions of rules may initially be placed in a non-Title V portion of the permit
