NOTICE OF PROPOSED ACTION

NOTICE IS HEREBY GIVEN that the Clark County Department of Air Quality and Environmental Management (DAQEM) received an application for initial Part 70 Operating Permit (Title V) for a stationary source of regulated air pollutants on March 30, 2005. Revisions to the original application for the Part 70 OP were also received to incorporate various ATC permits issued after the initial Title V application was submitted. The source is located at 3646 Losee Road, North Las Vegas, Nevada 89030. The Control Officer has reviewed the application and determined that the proposed operation of the stationary source can comply with the Clark County Air Quality Regulations (AQR) by applying the best available control technology (BACT) and/or lowest achievable emission rate (LAER) for all regulated pollutants.

This notice announces the 30-day public comment period, commencing Monday July 6, 2009, ending on Tuesday August 4, 2009 and is being issued pursuant to Nevada Revised Statute 445 and the AQR.

The Capital Cabinets, a Division of MasterBrand Cabinets (CC) has applied for initial Part 70 Operating Permit for a kitchen cabinets manufacturing facility in the Las Vegas Valley (Capital Cabinets, Source: 482). The Capital Cabinets, a Division of MasterBrand Cabinets (CC) is a synthetic minor source in terms of the potential to emit (PTE). However, the source is subject to 40 CFR 63, Subpart JJ and it is a Title V source. The source is located in the Las Vegas Valley airshed, hydrographic basin number 212. Hydrographic basin 212 is nonattainment for CO, PM₁₀, and ozone, and PSD for all other regulated air pollutants. Sources of regulated air pollutants (emission units) will include wood cutting and sanding operations, applications of various coatings and paints as well as contact cements used for the production of counter tops, and unpaved parking lot. The emission units will be permitted to operate up to 24 hours per day and 8,760 hours per year. Best available control technology (BACT) for pollution control includes baghouses and enclosures with 99.5% efficiency, spray booths, application of low content VOC and HAP materials, use of dust palliatives and gravel for control of PM₁₀.

The maximum PTE of regulated air pollutants due to the operation of this source will be as follows:

	PM ₁₀	NO _x	CO	SO _x	VOC	HAP
Source Potential to Emit (PTE) (tpy)	8.41	3.36	2.82	0.03	25.18	24.43

The technical support document (TSD), which describes the process, discusses compliance with relevant regulations, presents emission calculations, air quality impacts, and the proposed permit are available for public inspection at DAQEM, 500 S. Grand Central Parkway, Las Vegas, Nevada 89155, telephone (702) 455-5942 or the Clark County website: http://www.accessclarkcounty.com/depts/daqem/aq/pages/permits_notices.aspx. The TSD, and the proposed permit with enforceable conditions, will be mailed to interested persons upon request. Additional documentation may be requested by contacting Tina Gingras, Assistant Director, DAQEM or Richard D. Beckstead, Permitting Manager, DAQEM. Any fees associated with this request will be billed at a cost consistent with DAQEM policy and NRS 239.

Any person may submit written or oral comments to the Control Officer at the address given above. All comments must be received by Tuesday July 14, 2009 at 5:00 p.m., the close of this 30-day notice. The written comments will be retained and considered prior to the final determination by the Control Officer. A public hearing will be held on the proposed issuance of this permit if a request is made during the public comment period.
