

DEC 20 2010

Gerardo C. Rios, Chief
Permits Office
Air Division
U.S. EPA - Region IX
75 Hawthorne St
San Francisco, CA 94105

Re: **Proposed Authorities to Construct / Certificate of Conformity (Minor Mod)
District Facility # C-447
Project # 1102761**

Dear Mr. Rios:

Enclosed for your review is the District's engineering evaluation of an application for Authorities to Construct for E&J Gallo Winery, located at Fresno, which has been issued a Title V permit. E&J Gallo Winery is requesting that a Certificate of Conformity, with the procedural requirements of 40 CFR Part 70, be issued with this project. This modification of the equipment descriptions is limited to the addition of existing spirits, high proof spirits/alcohol and brandy to the winery fermentation and storage tanks.

Enclosed is the engineering evaluation of this application, a copy of the current Title V permit, and proposed Authorities to Construct # C-447-30-3, -31-3, -32-3, -33-3, -65-3 and -66-3 with Certificate of Conformity. After demonstrating compliance with the Authorities to Construct, the conditions will be incorporated into the facility's Title V permit through an administrative amendment.

Please submit your written comments on this project within the 45-day comment period that begins on the date you receive this letter. If you have any questions, please contact Mr. Jim Swaney, Permit Services Manager, at (559) 230-5900.

Thank you for your cooperation in this matter.

Sincerely,

David Warner
Director of Permit Services

**Re: Proposed Authorities to Construct / Certificate of Conformity (Minor Mod)
District Facility # C-447
Project # 1102761**

Dear Mr. Castro:

Enclosed for your review is the District's analysis of your application for Authorities to Construct for the facility identified above. You have requested that a Certificate of Conformity with the procedural requirements of 40 CFR Part 70 be issued with this project. This modification of the equipment descriptions is limited to the addition of existing spirits, high proof spirits/alcohol and brandy to the winery fermentation and storage tanks.

After addressing any EPA comments made during the 45-day comment period, the Authorities to Construct will be issued to the facility with a Certificate of Conformity. Prior to operating with modifications authorized by the Authorities to Construct, the facility must submit an application to modify the Title V permit as an administrative amendment, in accordance with District Rule 2520, Section 11.5.

If you have any questions, please contact Mr. Jim Swaney, Permit Services Manager, at (559) 230-5900.

Thank you for your cooperation in this matter.

Sincerely,

David Warner
Director of Permit Services

**San Joaquin Valley Air Pollution Control District
Authority to Construct Application Review
Wine Fermentation and Wine/Spirit Storage Tanks**

Facility Name:	E&J Gallo Winery – Fresno	Date:	September 7, 2010
Mailing Address:	5610 East Olive Ave. Fresno, CA 93727-2707	Engineer:	Don Ctibor
Contact Person:	Phil Castro	Lead Engineer:	Martin Keast
Telephone:	(559) 458-4588		
Fax:	(559) 458-2422		
E-Mail:	Phil.castro@ejgallo.com		
Application #(s):	C-447-30-3, -31-3, -32-3, -33-3, -65-3, -66-3		
Project #:	C-1102761		
Deemed Complete:	April 12, 2010		

I. Proposal

The primary business of E&J Gallo Winery - Fresno is the production of table wines and related beverages. The facility has submitted Authority to Construct (ATC) application to correct the equipment descriptions of proposed permit units to reflect the historical storage of spirit in the wine tanks. The proposed permit changes are corrections of in-house PTOs previously issued as a result of a loss of exemption as these tanks that have been always used for storage of spirit and wine; however the spirit storage was not noted on the initial permitting action.

Pursuant to Rule 2201, section 3.24, a New Source Review (NSR) modification is:

- Any change in hours of operation, production rate, or method of operation of an existing emissions unit, which would necessitate a change in permit conditions.
- Any structural change or addition to an existing emissions unit which would necessitate a change in permit conditions.
- An increase in emissions from an emissions unit caused by a modification of the Stationary Source when the emissions unit is not subject to a daily emissions limitation.
- Addition of any new emissions unit which is subject to District permitting requirements.
- A change in a permit term or condition proposed by an applicant to obtain an exemption from an applicable requirement to which the source would otherwise be subject.

Since this project does not fall into any of the NSR modification categories listed above, it does not constitute an NSR modification. Therefore, this project is not subject to District Rule 2201 and no calculations are required at this time.

E&J Gallo Winery - Fresno received their Title V Permit on December 12, 1997. This modification can be classified as a Title V minor modification pursuant to Rule 2520, Section 3.20, and can be processed with a Certificate of Conformity (COC). The facility has requested that this project be processed in that manner; therefore, E&J Gallo Winery - Fresno will be required to submit a Title V administrative amendment application prior to operating under the revised provisions of the ATCs issued with this project.

See existing Permits to Operate in Appendix E and Draft ATCs in Appendix F.

II. Applicable Rules

Rule 2201	New and Modified Stationary Source Review Rule (9/21/06)
Rule 2520	Federally Mandated Operating Permits (6/21/01)
Rule 4001	New Source Performance Standards (4/14/99)
Rule 4002	National Emissions Standards for Hazardous Air Pollutants (5/20/04)
Rule 4102	Nuisance (12/17/92)
Rule 4694	Wine Fermentation And Storage Tanks (12/15/05)
Rule 4695	Brandy Aging And Wine Aging Operations (9/17/09)
CH&SC 41700	Health Risk Assessment
CH&SC 42301.6	School Notice

Public Resources Code 21000-21177: California Environmental Quality Act (CEQA)
California Code of Regulations, Title 14, Division 6, Chapter 3, Sections 15000-15387: CEQA Guidelines

III. Project Location

The facility is located 5610 East Olive Avenue, CA. The District has verified that the equipment is located within 1,000 feet of the outer boundary of Riverview Elementary School. However, since this project does not result in an increase in emissions of any Hazardous Air Pollutant (HAPS), the public notification requirement of California Health and Safety Code 42301.6 is not applicable to this project.

IV. Process Description

E&J Gallo Winery produces and stores about 1,600,000 gallons of high proof and brandy with 2 ½ turns per year. The spirits are stored in tanks which are also used for fermentation and storage of wine. The throughput of spirits results in a maximum of two and a half transfers of the spirits each year. Storage operations are conducted year-round.

V. Equipment Listing

Pre-Project Equipment Description:

Pre-project, the permit units affected by the project consist of a total of 6 wine tanks at this facility. Statistics for the pre-project wine tanks at this facility are as follows:

- 6 Steel enclosed Top Red and White Wine Fermentation and Storage Tanks

Proposed Modification:

- Correct the equipment descriptions to indicate the historical storage of spirit in wine tanks.

Post Project Equipment Description:

Post project, the facility will contain 6 winery tanks with the following overall statistics:

- 6 red & white wine fermentation, and wine & spirit storage tanks

VI. Emission Control Technology Evaluation

VOCs (ethanol) are emitted from spirit storage tanks as a result of both working losses (which occur when the liquid level in the tank changes) and breathing losses (expansion and contraction effects due to temperature variations). The proposed pressure/vacuum valve limits these emissions by requiring the maximum amount of variation in tank pressure before allowing the tank to vent to the atmosphere or allowing air admission to the tank. When the storage tanks are insulated or located in a climate controlled building, breathing losses are considered to be negligible.

VII. General Calculations

A. Assumptions

- Winery tanks generally consist of three emissions units; 1) a fermentation tank emissions unit, 2) a wine storage tank emissions unit and 3) a spirit storage tank emissions unit. The modifications proposed in this project will only affect the spirit storage emission unit.
- Potential to Emit for spirit storage operations will be calculated on a tank-by-tank basis as outlined in District FYI-114, *Estimating VOC Emissions from Wine Storage Tanks* (attached in Appendix C). Annual potential to emit from the spirit storage tanks are calculated based on working loss emission factors for 100vol% Ethanol.
- Annual spirits storage for the six tanks is equal to a turn over 2 ½ times each tanks storage capacity resulting in 1,617,290 gallons (646,916 gallons and 2 ½ turns/year).

B. Emission Factors

The required emission factors for spirit storage operation are taken from District FYI-114, *Estimating VOC Emissions from Winery Tanks*, with storage tank emission factors interpolated from Table 1:

Spirit Storage Working Losses @ 100% Ethanol

Annual: 1.13 lb-VOC/1000 gallons annual throughput

C. Calculations

This project does not constitute an NSR modification as defined in Rule 2201 section 3.24 or result in a change in permitted emissions; therefore, NSR calculations are not required. However, the emission calculations for spirit storage are performed for reference purposes where annual PE1 is based on 24 million gallons of spirit storage and 1.13 lb-VOC/1000 gallons as given below:

$$\begin{aligned} \text{PE} &= 1,617,290 \text{ gallons/year} \times 1.13 \text{ lb-VOC/1000 gallons} \\ &= 1,828 \text{ lb-VOC/year} \end{aligned}$$

There is no change to facility's wine fermentation and wine storage operation in this project; therefore, no further discussion is required.

D. Major Source Determination

Pursuant to Section 3.24 of District Rule 2201, a Major Source is a stationary source with post-project emissions or a Post Project Stationary Source Potential to Emit (SSPE2), equal to or exceeding one or more of the following threshold values. However, Section 3.24.2 states, "for the purposes of determining major source status, the SSPE2 shall not include the quantity of emission reduction credits (ERC) which have been banked since September 19, 1991 for Actual Emissions Reductions that have occurred at the source, and which have not been used on-site."

This source is an existing Major Source for VOC emissions and will remain a Major Source for VOC. No change in other pollutants are proposed or expected as a result of this project.

VIII. Compliance

Rule 2201 New and Modified Stationary Source Review Rule

As discussed in section I of this evaluation, this project is not an NSR modification per section 3.24 of Rule 2201. Therefore, this rule does not apply to this project.

Rule 2520 Federally Mandated Operating Permits

This facility is subject to this Rule, and has received their Title V Operating Permit. The proposed modification is a Minor Modification to the Title V Permit pursuant to Section 3.20 of this rule:

In accordance with Rule 2520, 3.20, these modifications:

1. Do not violate requirements of any applicable federally enforceable local or federal requirement;
2. Do not relax monitoring, reporting, or recordkeeping requirements in the permit and are not significant changes in existing monitoring permit terms or conditions;

3. Do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;
4. Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement and that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject. Such terms and conditions include:
 - a. A federally enforceable emission cap assumed to avoid classification as a modification under any provisions of Title I of the Federal Clean Air Act; and
 - b. An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the Federal Clean Air Act; and
5. Are not Title I modifications as defined in District Rule 2520 or modifications as defined in section 111 or 112 of the Federal Clean Air Act; and
6. Do not seek to consolidate overlapping applicable requirements.

As discussed above, the facility has applied for a Certificate of Conformity (COC); therefore, the facility must apply to modify their Title V permit with minor modification, prior to operating with the proposed modifications. Continued compliance with this rule is expected. The facility may construct/operate under the ATC upon submittal of the Title V minor modification application.

Rule 4001 New Source Performance Standards (NSPS)

This rule incorporates NSPS from Part 60, Chapter 1, Title 40, Code of Federal Regulations (CFR); and applies to all new sources of air pollution and modifications of existing sources of air pollution listed in 40 CFR Part 60. However, no subparts of 40 CFR Part 60 apply to the production and storage of high proof and brandy tank operations.

Rule 4002 National Emission Standards for Hazardous Air Pollutants (NESHAPs)

This rule incorporates NESHAPs from Part 61, Chapter I, Subchapter C, Title 40, CFR and the NESHAPs from Part 63, Chapter I, Subchapter C, Title 40, CFR; and applies to all sources of hazardous air pollution listed in 40 CFR Part 61 or 40 CFR Part 63. However, no subparts of 40 CFR Part 61 or 40 CFR Part 63 apply to the production and storage of high proof and brandy tank operations.

Rule 4102 Nuisance

Rule 4102 states that no air contaminant shall be released into the atmosphere which causes a public nuisance. Public nuisance conditions are not expected as a result of these operations, provided the equipment is well maintained. Therefore, the following condition will be listed on each ATC to ensure compliance:

- {98} No air contaminant shall be released into the atmosphere which causes a public nuisance. [District Rule 4102]

California Health & Safety Code 41700 (Health Risk Assessment)

Pursuant to the District's Risk Management Policy, APR 1905 (03/01/01), for any source with increases in toxic air emissions, the health risks resulting from such projects must be evaluated. Since the proposed project did not result in an increase in emissions, no health risk analysis is required.

District Rule 4694 Wine Fermentation and Storage Tanks

The purpose of this rule is to reduce emissions of volatile organic compounds (VOC) from the fermentation and bulk storage of wine, or achieve equivalent reductions from alternative emission sources. This rule is applicable to winery fermenting wine and/or storing wine in bulk containers. As this project is to include the historical storage of spirit in the wine tanks; therefore, this rule is not applicable and no further discussion is required.

District Rule 4695 Brandy Aging And Wine Aging Operations

The purpose of this rule is to limit volatile organic compound (VOC) emissions from brandy aging and wine aging operations. This project is only related to storage of spirit in the wine tanks; therefore, this rule is not applicable and no further discussion is required.

California Health & Safety Code 42301.6 (School Notice)

The District has verified that this site is located within 1,000 feet of a school. However, pursuant to California Health and Safety Code 42301.6, since this project will not result in an increase in emissions, a school notice is not required.

California Environmental Quality Act (CEQA)

Greenhouse Gas Significance Determination

The purpose of this project is to include the historical storage of spirit in wine tanks that does not result in an increase in project specific greenhouse gas emissions. The District therefore concludes that the project would have a less than cumulatively significant impact on global climate change.

District CEQA Findings

The California Environmental Quality Act (CEQA) requires each public agency to adopt objectives, criteria, and specific procedures consistent with CEQA Statutes and the CEQA Guidelines for administering its responsibilities under CEQA, including the orderly evaluation of projects and preparation of environmental documents. The San Joaquin Valley Unified Air Pollution Control District (District) adopted its Environmental Review Guidelines (ERG) in 2001.

The basic purposes of CEQA are to:

- Inform governmental decision-makers and the public about the potential, significant environmental effects of proposed activities.
- Identify the ways that environmental damage can be avoided or significantly reduced.
- Prevent significant, avoidable damage to the environment by requiring changes in projects through the use of alternatives or mitigation measures when the governmental agency finds the changes to be feasible.
- Disclose to the public the reasons why a governmental agency approved the project in the manner the agency chose if significant environmental effects are involved.

The District performed an Engineering Evaluation (this document) for the proposed project and determined that the project qualifies for ministerial approval as an Authority to Construct due to a loss of permit exemption. Section 21080 of the Public Resources Code exempts from the application of CEQA those projects over which a public agency exercises only ministerial approval. Therefore, the District finds that this project is project is exempt from the provisions of CEQA.

IX. Recommendation

Issue Authority to Construct permits (C447-30-3 thru -33-3, -65-3 and -66-3) subject to conditions listed on the attached draft ATCs.

X. Billing Information

Annual Permit Fees			
Permit Number	Fee Description	Fee Schedule	Annual Fee
