

Bayview-Hunters Point

Community Technical Assistance Needs Discussion

Interested in cleanup at the Hunters Point Naval Shipyard and Yosemite Slough sites?

Please come tell us what technical assistance needs are most important!

At this meeting, EPA will provide brief updates on both sites, and then the TASC representative will facilitate a discussion with attendees to list and prioritize community technical assistance needs related to the two sites.

Monday, November 17

6:00-8:30 p.m.

Alex L. Pitcher, Jr. Community Room

Southeast Community Facility

1800 Oakdale Avenue

The U.S. Environmental Protection Agency (EPA) recently closed the Hunters Point Naval Shipyard Technical Assistance Grant (TAG). EPA expects that the TASC program (Technical Assistance Services for Communities) can give similar services to the Bayview community at both sites, with less administrative burden on the community. TASC can help identify community concerns and provide third-party, non-advocacy, neutral technical assistance, such as reviewing documents and presenting technical information.

We want your community experience to make this workshop successful. If you cannot attend on the 17th, but you still want to contribute to the process, please contact Miranda Maupin, TASC representative, before November 17, 2014 at (434) 975-6700, ext. 227 or mmaupin@skeo.com.

Light refreshments and kids' table provided by in-kind donations.
