## 1.0 INTRODUCTION

This Final Soil Gas Sampling Report (Report) has been prepared to present the final locations and results for the soil gas samples collected within the Operable Unit No. 1 (OU1) area of the Motorola 52nd Street Superfund Site (Site). This Site has been evaluated, monitored, and remediated since 1983 by Motorola Inc. and Freescale Semiconductor, Inc. (Freescale). This Report was prepared pursuant to Section 4.1.2 of the Statement of Work in the Administrative Settlement Agreement and Order on Consent (AOC) between the United States Environmental Protection Agency (EPA) and Freescale (August, 31, 2010, CERCLA Docket No. 2010-06). The Report has been prepared by Clear Creek Associates, PLC (Clear Creek) at the request of Freescale. In accordance with the AOC, the Report contains the following information:

- Methods and procedures used to install the implants and collect the soil gas samples, including:
  - Photos of implant installation;
  - Implant construction diagram;
  - Field documentation;
  - Example of access agreement.
- Description of sampling and analysis methods used.
- Analytical results and data quality assessment and validation reports.
- Discussion of findings.
- Recommendations, if any, for additional data collection activities.

The methods and procedures for collecting the soil gas samples are consistent with:

- Draft Guidance for Evaluating the Vapor Intrusion Pathway to Indoor Air Pathway from Groundwater and Soils (Subsurface Vapor Intrusion Guidance), US EPA, November 2002;

- Draft Advisory, Active Soil Gas Investigation, California Environmental Protection Agency, March 2010; and
- Interim Final Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air, California Department of Toxic Substances Control, Revised February 2005.

## **1.1 STUDY OBJECTIVES**

The purpose of this soil gas sampling investigation was to re-evaluate the soil gas to indoor air exposure pathway in the residential area west of the 52nd Street facility and the Old Crosscut Canal (OCC) in accordance with the AOC between the EPA and Freescale. The original study area is shown on Figure 1. The objective of the soil gas investigation was to determine whether volatile organic compounds (VOCs) are present in soil gas in concentrations in excess of risk-based Soil Gas Human Health Screening Levels (SGHSLs) thereby necessitating an indoor air sampling investigation. The study objectives were met by installing temporary (also known as “semi-permanent”) sample collection implants, conducting two rounds of discrete sampling of soil gas at two depths, and analyzing the samples for select VOCs.

## **1.2 SITE BACKGROUND**

The Motorola 52nd Street Superfund Site is located in the City of Phoenix, Maricopa County, Arizona. The Site has been divided by EPA into three adjoining Operable Units (OUs): OU1, OU2, and OU3. OU1, approximately 1,000 surface acres, is the easternmost OU and contains the former Motorola 52nd Street Semiconductor Plant (Facility). The Facility is currently owned and operated by ON Semiconductor, Inc. The OU1 boundaries are 52nd Street to the east, Palm Lane to the north, Roosevelt Street to the south, and 44th Street to the west.

Motorola Semiconductor Products Sector (Motorola) owned and operated the Motorola Facility from 1956 to 1999. As part of its electronics manufacturing operation, Motorola used solvents, including trichloroethene (TCE) and 1,1,1-trichloroethane (TCA), to clean and degrease parts and equipment. In 1982, a solvent leak was discovered in an underground storage tank at the facility. The 1983 Preliminary Report (Gutierrez-Palmenberg, Inc., 1983) indicated that groundwater contamination was present at the Motorola Facility and to the west. The Preliminary Report also identified sources of contamination in the Courtyard, Acid Treatment Plant (ATP), and Southwest Parking Lot (SWPL) areas. Multiple soil, soil gas, and groundwater investigations were performed at all the potential source areas on the Facility. These investigations are documented in the Remedial Investigation Report for the Motorola 52nd Street Site (Dames and Moore, 1987). In September 1988, ADEQ and EPA selected an interim remedy in the OU1 Record of Decision (ROD) consisting of soils cleanup at the Motorola Facility and groundwater containment near the 46th Street alignment. On October 4, 1989, EPA placed the Motorola 52nd Street Superfund Site on the National Priorities List (NPL). In July 1989, a Consent Order was executed between Motorola and the Arizona Department of Environmental Quality (ADEQ) for the design and implementation of the remedy for OU1. Pursuant to its separation agreement with Motorola, Freescale has agreed to implement the remedial actions on behalf of Motorola.

In August 2010, Freescale entered into an AOC with EPA to conduct a Soil Gas and Vapor Intrusion to Indoor Air Evaluation in the residential area west of the Facility. Previously, prior to Freescale assuming responsibility for the remediation, soil gas surveys were conducted by Motorola in November 1984; February – March 1985; January 1989; March and October – November 1991; and January 1992 to study the overall distribution of VOCs in soil gas at the Site including the residential area west of the Facility. ADEQ also conducted a soil gas study in March and July 1992 in the residential area to the west of the Facility to confirm and update the previous work conducted by Motorola. A compilation figure showing the sampling locations from the 1984, 1985, and 1992 soil gas investigations is included as Attachment 1.

The available soil gas data were used by the Arizona Department of Health Services (ADHS) to evaluate both the indoor and outdoor air exposure pathways as part of the Baseline Risk Assessment for the Motorola 52nd Street Facility (ADHS, 1992). ADHS determined that, based on the then-current understanding of TCE and PCE health risks, both the indoor and outdoor air exposure pathways were below health-based risk levels for all locations.

An additional soil gas survey was performed in the residential neighborhood by Motorola in November - December 1995. A figure showing the sampling locations from the 1995 soil gas investigation is included as Attachment 2.

### **1.3 RATIONALE**

This soil gas sampling investigation is the first step of a step-wise approach to evaluate the vapor intrusion to indoor air pathway as set forth in the AOC. Although EPA guidance does provide for the use of groundwater data as an initial screening step, the monitoring wells in the OU1 area are generally completed deep in the alluvium (the subsurface sediments or soil overlying the bedrock, or hard rock), across the alluvium-bedrock interface, or within the underlying bedrock and do not provide data describing the potential presence or absence of VOCs at the water table with the potential to migrate upwards into indoor air. Therefore, in accordance with the requirements of the AOC and the Soil Gas Sampling Investigation Work Plan (Work Plan) (Clear Creek, 2010), two rounds of soil gas samples (an initial and a confirmation sampling round) were collected in the residential neighborhood between the Facility and the Old Crosscut Canal (OCC). The results from the 1992 soil gas surveys as well as recent research (Hartman, 2006; Luo et. al., 2009) demonstrate that there are not significant seasonal variations in observed soil gas concentrations. Therefore, the two rounds of soil gas sampling were conducted consecutively. Use of soil gas data is appropriate to meet the study objectives since it is a direct measurement of contaminants with the potential to migrate into indoor air.

## 2.0 SOIL GAS IMPLANT INSTALLATION

Soil gas sampling (SGS) implants were installed and sampled per the Work Plan. Step-out locations were identified by Freescale/Clear Creek, approved by EPA, then installed and sampled. A description of the soil gas sampling locations, the steps conducted to obtain permission and access, and a description of the implant installation is provided in the following sub-sections.

### 2.1 SOIL GAS SAMPLING LOCATIONS

The Work Plan called for 26 original sample locations with the potential for additional step-out locations to be added, as needed, based on the results of the original samples (see Section 4.1, below). An additional 53 step-out locations were installed after approval by EPA. Of these, two were contingent locations (SV-68 and SV-70) that were not sampled based on the results of other nearby step-out sampling locations. The sampling locations are presented in Figure 2. The 26 original locations are represented with triangles and the step-out sample locations are represented with circles. Sample results were reviewed and step-out locations were proposed in the electronic daily activity reports submitted to EPA during the soil gas field work. Upon EPA's approval of the step-out locations the process to gain access to these locations was conducted. When access was acquired, installation of the implants was scheduled, and the implants were installed and sampled as discussed in Section 3.0.

### 2.2 PERMITTING, ACCESS AND NOTIFICATION

#### 2.2.1 Permitting/Access

City of Phoenix: The majority of sampling locations were in City of Phoenix (City) right-of-way (ROW). Clear Creek met with City engineers very early in the permitting process to develop the Work Plan that would meet study objectives and the City's permitting requirements. For purposes of permitting within City ROW, the SGS implants are considered to be temporary test wells. Freescale obtained a ROW permit from the City (as part of an existing Revocable Permit for previous Motorola monitor wells in right-of-

way work) for the sampling locations within City ROW. The City insurance and bonding requirements were met prior to issuance of the final permit. As step-out locations were identified in the City ROW, Clear Creek met with a City inspector at the locations to obtain access via a modification of the Temporary Test Wells in ROW permit. The permit also had various requirements for Bluestake, City department notification, and traffic control requirements that were addressed as needed.

Private Property and the OCC: For locations that were not in City ROW, access agreements were obtained from the responsible party including schools, the Arizona Department of Transportation, and private parties, and for the OCC, approval from the U.S. Bureau of Reclamation, the Salt River Project (SRP) and a permit from the Flood Control District of Maricopa County (FCDMC).

Copies of permits and an example of the access agreement used are provided in Appendix A. Freescale also had to secure access agreements from private parties for step-out sample locations. These access agreements also included notification, Bluestake and utility identification, and similar requirements.

### **2.2.2 Notification**

At least 5 days before field work started, a flier describing the soil gas sampling work was distributed to residents and businesses in the neighborhood. The flier explained that sampling may be conducted at additional locations based on the results from the initial sampling locations. When step-out locations were in areas that had not previously had fliers circulated, the fliers were distributed at least 48 hours prior to implant installation.

### **2.2.3 Utility Clearances**

Estimated locations of known utilities were identified as part of the process for obtaining a Temporary Test Wells in ROW Permit from the City. Prior to implant installation, each of the proposed implant locations was marked and Bluestake was contacted to identify utility locations. In addition to Bluestake, a private utility locater

was contacted to identify utilities in the vicinity of the SGS implant/boring locations. SGS implant/boring locations were adjusted in the field if there were issues such as utility clearances.

### **2.3 SAMPLE IMPLANT INSTALLATION**

Boart Longyear was contracted to install the SGS implants using a direct push method. Installation work began on April 18, 2011. Due to delays caused by lack of access to step-out locations, three mobilizations of the implant installation rig were required. Work was conducted in accordance with the Field Sampling Plan (FSP) included as Attachment A to the Work Plan.

Prior to arriving on site, all implant installation equipment was decontaminated by steam cleaning. At each location, Boart's Geoprobe™ rig hydraulically pushed drill rods to the desired depth of approximately fifteen and one-half (15.5) feet below ground surface (bgs). Once the desired depth was reached, the drill rod was retracted leaving an open boring. Each SGS implant was constructed by Boart as follows:

- Using a tremie pipe as necessary, added six (6) inches of silica sand filter pack to the bottom of the borehole,
- Lowered the first section of inert disposable Teflon™ tubing with an outer diameter between 0.125 and 0.25 inches and an attached microfilter sampling tip to the top of the emplaced silica sand filter pack (15 feet bgs),
- Added an additional six (6) inches of silica sand filter pack to cover the sampling tip,
- Labeled the deeper sampling port consistent with the requirements of Section 4.2.2 of the FSP,
- Verified the depth of the top of the silica sand filter pack with a measuring tape or rod,
- Added one (1) foot of dry granular bentonite on top of the silica sand filter pack,

- Added bentonite slurry or hydrated bentonite to a maximum of 5.5 feet bgs,
- Added six (6) inches of silica sand filter pack to the top of the bentonite seal,
- Lowered the second section of inert disposable Teflon™ tubing with an outer diameter between 0.125 and 0.25 inches and an attached microfilter sampling tip to the bottom of the borehole (5 feet bgs),
- Added an additional six (6) inches of silica sand filter pack to cover the sampling tip,
- Labeled the shallow sampling port consistent with the requirements of Section 4.2.2 of the FSP,
- Verified the depth of the top of the silica sand filter pack with a measuring tape or rod,
- Added one (1) foot of dry granular bentonite on top of the silica sand filter pack, and
- Added bentonite slurry or hydrated bentonite to a maximum of 0.5 feet bgs.

A diagram of the constructed 5-foot and 15-foot implants is presented as Figure 3. Implant installation dates and times are shown on Table 1. Photos of the implant installation activities are contained in Appendix B. Soil gas implants SV68 and SV70 were installed as part of the step-out program, but were not sampled because the results at SV64 were below EPA's Soil Gas Human Health Screening Levels (SGHSLs) for the Site listed in Table 2.<sup>1</sup>

Each sampling line was labeled and equipped with clamps and T-valves. The in-line valves or clamps were kept in place at all times while not sampling to prevent the backflow of ambient air into the sampling line between purges and prior to sampling. Following the installation of the sampling point, the volume of each sampling train,

---

<sup>1</sup> Subsequent to completion of the soil gas investigation, EPA changed the regional screening levels for both TCE and PCE as discussed more fully in Section 4.1.

including the annular space of the sand-pack, was calculated to determine the purge volume.

Clear Creek's on-site geologist monitored installation activities and maintained a log of observations made. Additionally, the geologist noted field conditions, odors encountered during drilling, implant rig behavior, and general site observations. The implants were allowed to equilibrate for a minimum of 30 minutes prior to any soil gas sampling at that location. SGS implant construction methods and completion times were recorded in either the field log book or on the field information form. Field forms from the installations are included as Appendix C.

Implant installation equipment (e.g. probe rods, and miscellaneous tools) were decontaminated between each location by washing with a high pressure hot water spray. The Facility has designated chemical truck unloading areas that are constructed of a fully-lined truck pad with a lined sump. Steam cleaning of the large equipment was conducted at one of the chemical truck unloading stations. Only decontaminated drill rods were used to install sampling implants

The SGS implants were capped with a flush-mounted, traffic-rated vault as per City and access agreement requirements. Implant installation was completed on July 27, 2011.

## **2.4 SAMPLE IMPLANT ABANDONMENT**

After the completion of all soil gas sampling efforts, including any step-out sampling locations, and with EPA approval, the SGS implants were abandoned by pulling out the implant tubing. Since the borings are completed above the water table and contain bentonite seals, installation of additional subsurface seals was not necessary. Per City ROW permit requirements, the well vaults in the streets were removed and the sites were repaired to meet the City ROW requirements. For wells not in the street the surface treatment was restored to like conditions prior to the SGS implant installation. The abandonment dates for each implant are shown on Table 1.

## 2.5 INVESTIGATION-DERIVED WASTE

Drill cuttings generated during implant installation and the implant tubing pulled during implant abandonment were contained, analyzed and disposed of properly as outlined in the FSP.

### 3.0 SOIL GAS SAMPLING AND ANALYSIS

After installation, Clear Creek field personnel collected soil gas samples from shallow and deep sampling intervals at each location pursuant to the FSP.

#### 3.1 SOIL GAS SAMPLING

Samples were collected in air tight glass syringes or summa canisters. Syringes were used for all original sample locations (SV1 through SV26) and step-outs SV27 through SV66, with the exception of SV60 and SV64. These two step-outs were sampled with summa canisters at a later date along with step-outs SV67, SV69, and SV71 through SV79. Summa canisters were also used for all replicate samples.

The shallow samples were collected from no less than five (5) feet bgs and the deep samples were collected from approximately fifteen (15) feet bgs. The soil gas was withdrawn from the end of the inert tubing that runs from the sampling tip to the surface using an airtight glass syringe, or Summa canister. The syringes were leak checked before each use by closing the exit valve and attempting to force ambient air through the valve. The tubing was purged of three internal dead volumes based upon EPA guidance. After the soil gas sample was collected with the syringe, it was immediately labeled, wrapped in foil, placed in a cooler without ice and transported to the mobile laboratory or fixed lab for analysis as described in Section 3.2, below. The use of small calibrated syringes allowed for careful monitoring of purge and sample volumes. This procedure ensured adequate sample flow was obtained without excessive pumping of air or introduction of surface air into the sample. The flow rate during purging and sampling was moderated not to exceed 200 milliliters per minute (ml/min) by the sampler to limit stripping of chemical compounds, to prevent ambient air from diluting the soil gas samples, and to reduce the variability of sampling rates. Replicate samples were collected with Summa canisters during the confirmation round of sampling as described in subsection 4.1.5 of the FSP. Replicate samples collected required a choke or flow regulator to be placed on the canister to ensure the flow rate

did not exceed 200 ml/minute. Canisters were immediately labeled, packed in a cooler or shipping box at ambient temperature and delivered to TestAmerica Laboratory, Inc.'s. (TestAmerica) fixed laboratory in Phoenix, Arizona or shipped to H&P Mobile Geochemistry, Inc.'s (H&P) fixed laboratory in California.

Following completion of the first round of SGS, the sampling implants were secured within the well vaults, with clamps and valves closed, in preparation for follow-up sampling. The second soil gas sampling round was conducted at the completion of the initial sampling round. The dates and times of the first and second rounds of sampling are shown on Table 1. The results from both soil gas sampling rounds were compared to the SGHSLs in Table 2. Field forms from the sampling are included in Appendix C.

### **3.1.1 Leak Detection**

During sampling, a leak test was used to evaluate whether a good seal was established in the implant installation. A leak test was conducted at every soil gas monitoring point each time a soil gas sample was collected because a poor seal could result in soil gas samples that are diluted or contaminated with ambient air. A leak detection gas, isopropanol, was used to saturate the air space around the sample train by applying it to a towel and placing it around the sampling train connections. To confirm that the sample train and implant surface seal was tight and leak free, samples were analyzed for the leak check compound. If the concentration of the leak check compound was greater than or equal to 10 ug/L, then corrective action would be necessary. Per guidance specifications, the seals would be checked and corrected if necessary and another sample would be collected. The leak detection procedure was followed for all soil gas samples and no corrective action was necessary.

### **3.1.2 Shut-In Test**

Prior to collection of the Summa canister samples (including replicates), a shut-in test was conducted to check for leaks in the above ground fittings. A shut-in test was conducted before each sample because a poor seal may result in soil gas samples that

are diluted or contaminated with ambient air. The shut-in test consisted of assembling the above-ground apparatus (e.g., valves, lines and fittings downstream from the top of the probe), and evacuating the lines to a measured vacuum of about 10 inches of mercury (>100 inches of water column [in-H<sub>2</sub>O]), then shutting the vacuum in with the closed valves on opposite ends of the sampling train. The vacuum gauge connected to the line via “T”-fitting was observed for at least one minute, and if there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum in the above-ground portion of the sample train did not noticeably dissipate (California EPA, 2010). If a leak was confirmed and the problem could not be corrected, the leaking apparatus was replaced. A similar pressure test was performed on the glass syringe sample trains prior to sampling.

### **3.1.3 Sample Handling and Labeling**

Samples were handled under standard chain of custody (COC) protocol at all times. Samples were logged on a COC at the time of sampling and the COCs were used to track all samples between collection and hand delivery to the mobile or fixed analytical laboratories. All samples collected were labeled with a unique identifier consisting of the borehole ID and the depth interval. For example, the soil gas sample collected at 15 feet bgs from implant SV-10 was labeled SV-10-15. This sample identification and the date and time the sample was collected were written on a label and attached to the canister. Additionally, all sample information was recorded, including sample collection date and time, sampler’s initials, and analyses to be performed. This information was logged in the daily field notes for the project. Table 1 shows the lab to which each sample was delivered.

### **3.1.4 Field Duplicate Samples**

In accordance with the Quality Assurance Project Plan (QAPP) At least one duplicate sample was collected and analyzed per 10 samples, or about one per day. The duplicate samples were collected by using a three-way valve at the point of collection that divided the sample stream into two separate sample containers.

### **3.1.5 Field Replicate Samples**

In accordance with the QAPP, field replicate samples were collected in 400 ml Summa canisters and analyzed with Method TO-15 for ten percent of the samples from the confirmation round of samples. These replicates were collected at locations with the highest observed concentrations from the initial sampling event. The Summa canister for the replicate sample and the syringe for the primary sample were both connected to the SGS implant tube with a three-way valve. To be consistent with the way the rest of the primary samples were purged and collected, the syringe sample associated with the field replicate sample was collected immediately after the initial three purge volumes. Immediately after the syringe sample was collected, the Summa canister sample was collected. The Summa canister samples were delivered daily to TestAmerica for analysis by Method TO-15.

## **3.2 SOIL GAS ANALYSIS**

H&P provided the mobile laboratory for analysis of the initial soil gas samples and a number of the step-out samples. H&P's fixed lab in California also provided analysis for the latter stages of step-out samples. The sample identifications (IDs) and the laboratory ID are shown on Table 1.

H&P is a nationally recognized lab that specializes in environmental analytical chemistry. Their mobile labs are equipped with state-of-the-art instruments in order to achieve low detection limits while maintaining the highest quality data. H&P is certified through the National Environmental Laboratory Accreditation Program (NELAP) in California. Per the AOC, labs accredited through NELAP meet the Quality Systems requirement as

described in ANSI/ISO/ASQ E-14001-2004 “Quality Systems for Environmental Data and Technology Program – EPA Requirements with Guidance for Quality Management Plans” (QA/R-2) (EPA/240/B-01/002, March 2001) (EPA, 2001).

H&P follows EPA Region 9 and California Department of Toxic Substance Control (DTSC) protocols for vapor intrusion investigations. Soil gas sample analyses were conducted by H&P for VOCs by a modified version of EPA Method TO-15. A modified version of EPA Method TO-15 was chosen for this soil gas investigation since detection limits capable of meeting the SGHSLs for all the target analytes can be achieved.

Both mobile and fixed labs were capable of meeting the method detection limits (see Table 2) necessary based on the SGHSLs, and meeting the necessary quality assurance/quality (QA/QC) control requirements. In addition, the mobile lab provided preliminary analytical results on a daily basis to enable decisions to be made on the need for step-out sampling locations.

Twelve primary soil gas samples and two confirmation samples as well as all field replicate samples were collected in Summa canisters as described in Section 3.1.5, above, and were analyzed by TestAmerica in its fixed laboratory in Phoenix, Arizona. The TestAmerica network of laboratories collectively maintains laboratory certifications, accreditations and/or approvals in all 50 U.S. States. All TestAmerica laboratory facilities hold NELAP accreditation as well. Per the AOC, labs accredited through NELAP meet the Quality Systems requirement as described in ANSI/ISO/ASQ E-14001-2004 “Quality Systems for Environmental Data and Technology Program – EPA Requirements with Guidance for Quality Management Plans” (QA/R-2) (EPA/240/B-01/002, March 2001) (EPA, 2001). Soil gas sample analyses were conducted by TestAmerica for VOCs by EPA Method TO-15. Samples were collected in 400 milliliter (ml) Summa canisters and delivered to the laboratory for analysis.

Electronic copies of the laboratory reports are provided in Appendix D.

### **3.3 DATA VALIDATION**

A Tier 1a validation was conducted in the field by the H&P mobile laboratory chemist to allow for decisions to be made for step-out sampling. Clear Creek Associates submitted all the soil gas data to the chemists and analytical data specialists at Innovative Technical Solutions, Inc. (ITSI) for more extensive validation. ITSI performed a Tier 1b validation on all of the analytical data and a Tier 3 validation on 10 percent of the data in accordance with the Work Plan, the AOC, the QAPP and EPA's National Functional Guidelines for Data Review. Clear Creek provided ITSI with the SGS laboratory data package. ITSI produced data validation reports summarizing its findings as well as a Data Quality Assessment Report (DQAR) ITSI concluded that the data are of acceptable quality and should be considered usable for their intended purposes. Those reports are included as Appendix E.

### **3.4 DATA MANAGEMENT AND REPORTING**

The data reported by the laboratory was provided in an electronic data deliverable (EDD) format and entered in an electronic database that is Microsoft Access or Microsoft Excel compatible. The database maintains the integrity of the data while facilitating the retrieval of the data for analysis in tables and figures.

### **3.5 REPORTING**

Freescale notified EPA with a Notification of Initiation of Field Work on April 4, 2011, fourteen (14) days before initiating any physical work in the field. Beginning on April 18, 2011, Freescale provided electronic Daily Field Activity Reports in accordance with the requirements in the AOC on the days on which field work was performed. These Daily Field Activity Reports included: (1) a description of the actions which have been taken to comply with the AOC during that day; (2) all the results of sampling and tests and all other data received by Freescale; (3) the work planned for the next day with schedules relating this work to the overall project schedule; (4) a description of all problems encountered and any anticipated problems, any actual or anticipated delays, and

solutions developed and implemented to address any actual or anticipated problems or delays; and (5) decisions regarding step-out locations, if applicable.

On August 15, 2011, within five (5) days of completion of all soil gas field activities associated with the implant installation and sampling, Freescale notified EPA in writing with a Notification of Completion of Field Work. EPA approved completion of the soil gas investigation on September 29, 2011.

## 4.0 DISCUSSION

### 4.1 IDENTIFICATION OF STEP-OUT SAMPLING LOCATIONS

Freescale conducted soil gas sampling at 53 “step-out” locations that were identified based on the preliminary data from the initial sampling of the original 26 proposed soil gas sampling locations. To determine if step-out sampling locations were necessary, Freescale reviewed the preliminary results from both the initial and confirmation sampling rounds of both the shallow and deep sampling ports on an on-going basis in accordance with Sections 2.2.1 and 2.2.2 of the Work Plan. EPA was consulted on and approved all step-out decisions prior to installation and sampling.

With the exception of chloroform and bromodichloromethane, as discussed further in Section 4.4, below and in Appendix F, the main criterion for proposing a step-out location was whether the preliminary data exceeded the applicable SGHHL listed in Table 2. Chloroform and bromodichloromethane are disinfection by-products thought to relate to municipal water or wastewater sources, not the underlying groundwater, and an exceedence of a SGHHL by these two compounds was not used as a primary decision criterion in evaluating step-out sampling locations.

In accordance with the AOC, when evaluating the preliminary soil gas results, if TCE or PCE soil gas concentrations were observed in excess of a SGHSL in a perimeter sampling location, then a step-out sampling location was proposed to EPA for approval. This was done in order to define the boundary of the overall soil gas study area. The one exception to this process was for the PCE concentration observed in the deep sampling port at SV18. Multiple samples were collected with results varying from slightly below to slightly above the SGHSL. No detections above the SGHSL were observed in the shallow sampling port. The result was considered an outlier based on its location outside the known plume area and with consideration to the multiple sampling locations between SV18 and the 52<sup>nd</sup> Street facility.

Subsequent to EPA's approval of Freescale's completion of the soil gas investigation, EPA published revised Toxicity Assessments for both TCE and PCE. In response to the revised Toxicity Assessments, EPA updated the Regional Screening Level (RSL) for TCE in November 2011 and the RSL for PCE in May 2012. Because EPA determined that TCE was more toxic than previously thought, EPA lowered the RSL for Residential Air TCE from 1.2 ug/m<sup>3</sup> to 0.43 ug/m<sup>3</sup> and the RSL for Industrial Indoor Air from 6.1 ug/m<sup>3</sup> to 3.0 ug/m<sup>3</sup>. Because EPA determined that PCE was less toxic than previously thought, EPA raised the RSL for Residential Air from 0.41 ug/m<sup>3</sup> to 9.3 ug/m<sup>3</sup> and the RSL for Industrial Air from 2.1 ug/m<sup>3</sup> to 47.2 ug/m<sup>3</sup>. As noted in Section 4.3, below, EPA and Freescale have considered the revised RSL value for TCE during the implementation of the on-going indoor air evaluation.

Step-out sampling locations were not proposed for perimeter sampling locations on the eastern study area boundary along 50<sup>th</sup> Street since the soil gas investigation on the former 52<sup>nd</sup> Street facility will be the subject of a separate investigation effort.

In accordance with the AOC, step-out sampling locations in the interior of the study area were optional and subject to EPA approval. Several factors were considered when evaluating the remaining soil gas results from interior sampling locations to determine if a step-out sampling location was necessary. The results from nearby sampling locations, and the spacing between sampling locations was considered when evaluating the need for additional step-out locations. The results from both sampling ports were compared to the SGHSHL to determine the magnitude of the exceedence. The adjoining property use was a factor as was access considerations. In one location, due to the density of development, it was determined it was more appropriate to proceed with an indoor air investigation to further refine the area rather than attempt to do so using soil gas sampling. In general, the approach was to opt to install step-out sampling locations within the interior of the study area when there was an exceedence of a SGHSL in order to refine the area of interest for the subsequent indoor air evaluation.

After the step-out locations (either perimeter or interior) were installed and sampled, the preliminary results from the step-out locations were again evaluated to determine if additional step-outs were necessary. The process was repeated until the study area was bounded and the area for the subsequent indoor air investigation was adequately defined.

As described below, a total of 26 original locations and 53 step-out locations were installed. Of the 53 step-out locations, two were contingent locations that did not need to be sampled.<sup>2</sup>

- Out of the initial 26 sampling locations, 8 locations (SV 2, SV4, SV11, SV13, SV20, SV24, SV25, and SV26) exceeded a SGHSL and led to the identification of 21 step-out locations (referred to herein as Step 1 locations). The Step 1 locations were:
  - SV39, SV40, and SV41 (for SV2).
  - SV28 and SV29 (for SV4).
  - SV42, SV52 and SV55 (for SV11).
  - SV30, SV31, SV32, and SV38 (for SV13).
  - SV43, SV44, and SV45 (for SV20).
  - SV36 and SV37 (for SV24).
  - SV35 (for SV25).
  - SV27, SV33, and SV34 (for SV26).
- Out the 21 Step 1 locations, 18 exceeded a SGHSL and led to the identification of 19 Step 2 locations. The Step 2 locations were:
  - SV60 and SV61 (for SV41).
  - SV59 and SV62 (for SV30 and SV31).
  - SV46 (for SV43).
  - SV65 and SV66 (for SV45).
  - SV53, SV56, SV57, SV58, and SV69 (for Sv36 and SV37).

---

<sup>2</sup> The contingent locations were identified as SV68 and SV70.

- SV47, SV48, SV49, SV50, SV51 and SV54 (for SV35).
- SV 63 (for SV27 and SV28)
- Out of the 19 Step 2 locations, 12 exceeded a SGHHS� and led to the identification of four Step 3 locations. The Step 3 locations were:
  - SV71 and SV72 (for SV53).
  - SV64 and SV67 (for SV48 and SV49).
- Out of the four Step 3 locations, two exceeded a SGHHS� and led to the identification of seven Step 4 locations.
  - SV73, SV74, SV75, SV76, SV77, and SV79 (for SV71 and SV72).
- All seven of the Step 4 locations were below the SGHHS� and the soil gas sampling investigation was brought to a close.

#### **4.2 COMPARISON OF SOIL GAS RESULTS TO SGHHSLS**

Upon receipt of the final data packages from the laboratory, Clear Creek entered the data in an Excel spreadsheet comparing the results to the SGHHSLS from the approved Soil Gas Sampling Work Plan (Clear Creek Associates, 2011) as shown in Table 2.<sup>3</sup> The data from the soil gas investigation are shown in Table 3. Results exceeding one or more of the screening levels are highlighted in the table. Soil gas results for TCE and PCE are shown on Figures 4 and 5, respectively. Two values are reported at each implant location. The upper number represents the highest concentration at the 5-foot depth from the primary or confirmation sampling. The lower number is the highest result from the 15-foot depth. The data values are blue if no TCE or PCE concentrations were detected, green if detected but below the screening level and orange if detected above the screening level. The well location symbol is colored the same as the highest result observed in either the 5-foot or 15-foot depth.

---

<sup>3</sup> Subsequent to completion of the soil gas investigation, EPA issued its final human health assessment for TCE (September 28, 2011) and for PCE (February 10, 2012). Based on these assessments, EPA lowered the Regional Screening Level (RSL) for Indoor Air for TCE and raised the RSL for Indoor Air for PCE. The revised values are discussed in Section 4.1 of this report and are shown in EPA's RSL tables dated May 2012.

### 4.3 IDENTIFICATION OF AREAS OF INTEREST FOR INDOOR AIR INVESTIGATION

Freescale/Clear Creek and EPA evaluated the data and identified several areas where an indoor air/sub-slab investigation was warranted based on the soil gas results. Those general areas are reflected on Figure 6. A conservative approach was taken to identify study areas such that the indoor air study areas are large enough to be bounded by soil gas screening levels that meet the residential SGHHSs. SV55, located on commercial property north of McDowell and east of 48<sup>th</sup> Street, was slightly above the SGHHS in the 15-foot sampling interval but is approximately 10-fold below the commercial SGHHS so it was not included in an indoor air study area. Although SV11 and SV52, located on commercial property on the south side of McDowell Road east of 48<sup>th</sup> Street, were also below the commercial SGHHS, they were included in an indoor air study area to be conservative due to the presence of a school.

The rationale and procedures for conducting the indoor air investigation are set forth in a Sub-slab and Indoor Sampling Work Plan. Consistent with the AOC, Freescale submitted a building inventory with the draft indoor air work plan on June 6, 2011. Freescale submitted a revised work plan on June 27, 2011 and again on July 18, 2011 in response to comments from EPA. EPA gave conditional approval of the indoor air work plan on July 22, 2011. A final indoor air work plan was submitted on August 11, 2011, amended May 4, 2012 and approved by EPA on May 21, 2012. Freescale recognized that the revised RSL value for TCE would have an effect on the calculated SGHHS and the identification of indoor air study areas. Accordingly, Freescale has proposed to conduct additional indoor air sampling based on the results of the soil gas investigation. The indoor air/sub-slab investigation will be presented in a separate report in accordance with the AOC.

#### 4.4 COMPARISON OF RESULTS TO GROUNDWATER CONCENTRATIONS

In addition to evaluating the soil gas results with regard to identifying if an indoor air investigation was necessary, Clear Creek also reviewed the data with regard to what is known about the groundwater concentrations in the same area to determine if there were any correlations between the two and to evaluate whether the distribution of data is consistent with the conceptual site model.

TCE concentration contours in groundwater are overlain on the TCE soil gas results on Figure 7. A comparison of the TCE soil gas concentrations to the TCE contours in groundwater shows that elevated soil gas concentrations along 50th Street and near the northern part of the Old Crosscut Canal roughly correspond to elevated groundwater concentrations, but the groundwater concentrations do not correlate well with elevated soil gas concentrations along Willetta Street and Almeria Road. It should be noted, however, that the available data for alluvial groundwater is limited in these two areas. The elevated soil gas concentrations along Willetta Street are roughly coincident with the location of a subsurface bedrock ridge. The presence of the bedrock ridge locally alters groundwater flow directions and creates a preferential flow and transport pathway directed to the northwest. The presence of the elevated soil gas concentrations in this area is thought to relate to either: i) the presence of a thin zone of impacted groundwater flowing along the bedrock ridge that cannot be observed in the existing well network; or ii) to residual mass within the subsurface left behind by historical transport and exposed as a result of declining water levels. Groundwater flow in the vicinity of the bedrock ridge is a low flow zone (an area with a reduced hydraulic gradient), thus, contaminants are less likely to be flushed from the area over time compared to areas further to the north away from the ridge. As part of a separate investigation, on December 29, 2011 Freescale submitted a draft Work Plan for the installation of additional groundwater monitoring wells in the OU1 area to address identified data gaps. The results from this soil gas investigation were considered when evaluating potential data gaps in the OU1 area.

A map of the PCE soil gas concentrations and the groundwater concentration contours is presented as Figure 8. PCE concentrations in groundwater are relatively low in the OU1 area and, except for elevated concentrations in the courtyard area near SV02 which shows a soil gas concentration of up to 1,900 ug/m<sup>3</sup>, the remaining elevated soil gas concentrations do not match up with groundwater contours. In general, the distribution of elevated PCE in soil gas along Willetta Street is similar, albeit with lower observed concentrations, as the TCE distribution and its distribution is thought to be associated with the same groundwater flow factors discussed above. No elevated PCE soil gas concentrations are observed along Almeria Road likely as a result of the minimal PCE source and absence of PCE contamination in groundwater in the OU1 area.

Chloroform and bromodichloromethane are trihalomethanes (THMs) which are disinfection by-products commonly produced during the chlorination of municipal water supplies. Chloroform is not part of the current list of analyzed parameters in groundwater samples; however, the most recent sampling round when chloroform was analyzed sitewide (4th quarter 1997) showed no elevated levels (see Appendix F). Bromodichloromethane is also no longer analyzed on a regular basis, but review of historic data show no elevated areas in the alluvial groundwater. As discussed in the attached Technical Memorandum, Appendix F, the chloroform and bromodichloromethane observed in soil gas are thought to originate from municipal water or wastewater sources in the area.

## 5.0 CONCLUSIONS

The purpose of the soil gas investigation was to determine whether soil gas in the study area exceeded risk based soil gas screening levels and, if so, to identify areas of interest for conducting an indoor air investigation. Soil gas implants were installed at 26 originally planned locations and 53 step-out locations. As discussed in Section 4.1, step-out locations were installed when either perimeter sampling locations exceeded the SGHSL for TCE in order to bound the soil gas investigation study area, or within the perimeter of the soil gas investigation study area in order to provide additional data to refine the identified the indoor air investigation areas of interest. Primary and confirmation samples were collected from the 5-foot and 15-foot implants at 77 locations. Duplicate and replicate samples were collected in accordance with the requirements of the approved Soil Gas Investigation Work Plan. The data were validated and determined to be of acceptable quality. The area with soil gas concentrations in excess of the screening levels related to historical operations at the former Motorola 52nd Street facility has been bounded by the step-out sampling locations and the completion of the soil gas investigation was approved by EPA on September 29, 2011.

Concentrations of soil gas above the screening levels led to the identification of areas of interest that are generally bounded by soil gas sampling locations that are below the risk based screening level for TCE. Freescale recognized that the revised RSL value for TCE would have an effect on the calculated SGHSL and the identification of indoor air study areas. Accordingly, Freescale has proposed to conduct additional indoor air sampling based on the results of the soil gas investigation. The objectives and procedures to be implemented for a sub-slab and indoor air investigation were developed pursuant to the draft and final work plans (July 22 and August 11, 2011) approved by EPA and the amended work plan dated May 4, 2012 and approved by EPA on May 21, 2012. The indoor air investigation is being implemented in accordance with the AOC and Indoor Air Work Plan and subsequent addenda.

1,1,2,2-Tetrachloroethane	4.2E-02	2.1E-01	2.3E-03	1.2E-03	1.8E+01	1.8E+02	13
Tetrachloroethene (PCE) <sup>4</sup>	4.1E-01	2.1E+00	2.3E-03	1.2E-03	1.8E+02	1.8E+03	15
1,1,1-Trichloroethane	5.2E+03	2.2E+04	2.3E-03	1.2E-03	2.3E+06	1.8E+07	8
1,1,2-Trichloroethane	1.5E-01	7.7E-01	2.3E-03	1.2E-03	6.5E+01	6.4E+02	9
Trichloroethene (TCE) <sup>5</sup>	1.2E+00	6.1E+00	2.3E-03	1.2E-03	5.2E+02	5.1E+03	8
Trichlorotrifluoroethane (F-113)	3.1E+04	1.3E+05	2.3E-03	1.2E-03	1.3E+07	1.1E+08	15
Vinyl Chloride	1.6E-01	2.8E+00	2.3E-03	1.2E-03	7.0E+01	2.3E+03	10

Notes:

- 1) In effect during the implementation of the approved Soil Gas Sampling Work Plan, Clear Creek Associates, March 17, 2011.
- 2) Default attenuation factors are estimated for a building constructed without engineered fill below sub-slab.
- 3) At this time, indoor air RSLs are not available for this compound so the trans-1,2-DCE isomer was used as a surrogate value.
- 4) In May, 2012 EPA revised the RSL for PCE to 9.3E+00 ug/m<sup>3</sup> for residential air and 4.7E+01 ug/m<sup>3</sup> for industrial air. The calculated SGHSL at the 1.0E-06 risk level would be 4.0E+03 ug/m<sup>3</sup> for residential air and 3.9E+04 ug/m<sup>3</sup> for industrial air using the default attenuation factors and the revised RSL value.
- 5) In November, 2011 EPA revised the RSL for TCE to 4.3E-01 ug/m<sup>3</sup> for residential air and 3.0E+00 ug/m<sup>3</sup> for industrial air. The calculated SGHSL at the 1.0E-06 risk level would be 1.9E+02 ug/m<sup>3</sup> for residential air and 2.5E+03 ug/m<sup>3</sup> for industrial air using the default attenuation factors and the revised RSL value.

**Permit #** CMW 11000868 **Bond #** 12685 **Issued** 14-JAN-2011 **Expires** 13-JAN-2013

**Permit Description** PMT#1-OU1 SOILGAS TEST: MW# SV02,12,19

**Project** 10-3405 TEMPORARY TEST WELLS IN ROW

**Address** 302 N 5200 E 1601 N 4800 E Q-S: Q11-39 ZONING: R-4

**Zoning**

**Description/Scope of Work:** MONITORING WELL

DESCRIPTION OF WORK: SOIL-GAS TEST WELLS INSTALLED IN RIGHT-OF-WAY PER APPROVED PLAN. TEST RESULTS MAY REQUIRE ADDITIONAL WELLS TO BE DRILLED (SEE COMMENTS BELOW). SEE PLAN SHEET #2

PERMIT FEES ARE CALCULATED PER 2 HOUR MINIMUM INSPECTION.\* BONDS ARE APPLIED TO EACH WELL.

STREET TRANSPORTATION REVOCABLE PERMIT NUMBER: RP-04031-15

STATE OF ARIZONA WELL ID NUMBER(S):N/A, ALL WELLS DRILLED ARE APROXIMATELY 15' DEEP. REGISTRATION NUMBER NOT REQUIRED BY STATE STATUTE: A.R.S. 45-103

\*INSPECTION FEES FOR ANY ADDITIONAL WELLS TO BE CHARGED IN FIELD BY CITY OF PHOENIX INSPECTOR/SUPERVISOR.(\$150.00/HR. 2 HOUR MINIMUM).

**Valuation:** \$1,500

Permit Issued By MHAE

Entered By MHAE

Inspections Required: PEI

**Call 48 hours before beginning work 602-262-7811**

NOTICE - This permit authorizes the above described work to be done in accordance with the approved plans and all applicable City codes and ordinances. Plan approval and permit issuance does not authorize violation of any city code or ordinance. The contractor(s) doing the work and the property owner or tenant/occupant authorizing the work are all legally responsible for complying with all codes and ordinances. This permit expires by limitation and is null and void if work has not started within or ceased for any reason for 180 days, or if work is not completed by the expiration date printed above. Work after this time or beyond the scope of this permit requires a new supplemental permit. This permit can be suspended or revoked for failing to follow the approved plans or for violation of any City code or ordinance. Work within the public right-of-way shall comply with all City standard details and specifications. The contractor is responsible for maintaining streets and sidewalks safe and usable at all times. All barricades shall be approved in advance and shall comply with the City Traffic Barricade Manual.

FLOOD CONTROL DISTRICT OF MARICOPA COUNTY

2801 West Durango Street, Phoenix, Arizona 85009 (602) 506-1501

PERMIT TO USE FLOOD CONTROL DISTRICT RIGHT-OF-WAY

Filing Fee \$250.00
Inspection Fee
Bond Amount \$27,655.00
Bond / Account # KO8419267
Easement Deposit
Rent Fee

Permit No. 2010P038
Effective Date 4/18/11
Expiration Date 6/18/11
Extended Expiration Date 11/30/11
Extension Fees \$50.00
Received by [Signature]

This Agreement made by and between the Flood Control District of Maricopa County, hereinafter referred to as DISTRICT, and BOART LONGVEAR COMPANY hereinafter referred to as PERMITEE. The DISTRICT hereby grants, pursuant to the terms and conditions appearing below upon the reverse side hereof, a revocable permit to enter upon, occupy and use, at PERMITEE's sole expense, right-of-way described as follows and as shown on Exhibit 'A':

OLD CROSS CUT CANAL S. OF MCDOWELL ROAD

The right-of-way is to be used for the sole and express purpose of:

SOIL-GAS INVESTIGATION

Stipulations:

Because FREESCALE SEMICONDUCTOR, INC., has an easement for the activities allowed in this permit, and because the DISTRICT has maintenance responsibilities only in the parcel(s) affected by this permit, rent is not being charged. In addition, PERMITEE is responsible for obtaining any necessary permits/approvals from the underlying fee owner as well as the appropriate entity, including, but not limited to, dust control permits. PERMITEE is further responsible for compliance with all terms and conditions in said dust control permits in accordance with Paragraph 2 of the Conditions and Specifications of this permit.

PERMITEE is responsible for restricting the general public's access to the structure during construction activities allowed in this permit, although the DISTRICT'S access to the structure may not be restricted under any circumstances. If necessary, PERMITEE shall provide alternate access to the DISTRICT, at no cost to the DISTRICT.

Discharge into the DISTRICT'S structure from the wells and/or construction activities is prohibited. PERMITEE is further responsible for remove any cuttings and other debris caused by their construction activities.

Storage of equipment and/or material in the channel limits is prohibited. PERMITEE'S activities may not disturb the concrete channel lining of the DISTRICT'S structure. However, PERMITEE must maintain the site in a safe condition during construction activities allowed in this permit.

All DISTRICT right-of-way including, but not limited to, access roads, fencing and landscaping, shall be restored to original or better condition, to the satisfaction of the DISTRICT'S inspector. The DISTRICT shall assume no responsibility for maintenance of the monitoring wells.

All work shall be performed in a safe workman like manner to the satisfaction and approval of the DISTRICT. Notify Mike Ramirez, Permits Inspector, at 602-506-2975; Shelby Brown, at 602-506-4583; Angie Hardesty at 605-506-5476; or Carlos Rivera, 602-506-4723, 48 hours prior to any work and upon completion. The contractor is responsible for having a copy of this Permit onsite at all times while work is being performed in DISTRICT rights-of-way. As-built plans sealed by an Arizona registered engineer or land surveyor and DISTRICT gate key, if provided, must be submitted to the DISTRICT before release of any construction bond that is retained.

## CONDITIONS AND SPECIFICATIONS

1. Permittee warrants and represents that he and/or his Contractor(s) are qualified to perform the undertaking which is the subject of this Permit and agrees to obtain such other licenses, permits and agreements as may be required by other appropriate governmental agencies. This Permit is subject to all prior unexpired permits, agreements, easements, privileges or other rights, whether recorded or unrecorded, and Permittee shall make his own arrangements with holders of such prior rights.
2. Permittee shall take whatever steps, procedures or means required to prevent any dust nuisance due to the construction operations allowed in this permit. The dust control measures shall be maintained at all times to the satisfaction of the District and in accordance with the requirements of the Maricopa County Bureau of Air Pollution Control Rules and Regulations. The District will issue an immediate stop work order for failure to comply with the terms and conditions of this paragraph. If Permittee fails to correct the dust nuisance to the satisfaction of the District within twenty-four (24) hours from the date of the stop work order, the District will revoke the permit in accordance with Paragraph 11 of these Conditions and Specifications. Any costs to the District associated with the dust nuisance, including, but not limited to, fines, penalties and attorney fees, shall be the responsibility of the Permittee.
3. Approved construction of improvements in District right-of-way shall be completed and maintained in conformity with all applicable safety standards and regulations and in a manner so as to avoid the creation of potentially dangerous conditions and harm to others. All work shall conform to the Uniform Standard Specifications for Public Works Construction by the Maricopa Association of Governments as amended. Inspection by the District is not intended nor understood to be more than a determination that any specifications set forth herein have been complied with by Permittee and is not to be considered as an approval or ratification by the District of the quality or fitness of Permittee's improvements.
4. Permittee shall be liable for any and all damages to the property of the District or of any other party by reason of the exercise of the privilege herein given. Permittee further agrees to indemnify and hold harmless the District, its agents, officers, employees, successors or assigns against any and all claims, actions, costs or expenses for property damages loss or expense that is attributable to bodily injury, sickness, disease, death, or personal injuries caused by or related to the rights herein granted, except those caused solely and exclusively by the negligence of the District.
5. Permittee shall not generate, manufacture, refine, transport, dispose, produce, process, handle, use, store or treat any Hazardous or Extremely Hazardous Substance, Hazardous Waste, Special Waste or Solid Waste on the property, or use the property in such a manner as to create an environmental or public health hazard or nuisance, as these terms are defined by any federal, state, or local laws, statutes or rules or regulations. Permittee shall defend, indemnify and hold District harmless from and against all claims, demands, actions, judgments, settlements, liens, penalties, damages, losses, injuries costs and expenses (including reasonable attorneys' fees) arising out of or in any way related to Permittee's failure to comply with the provisions of this paragraph.
6. In the event the use of the property does not comply with applicable plans, conditions, specifications, provisions and limitations stated herein, or upon revocation of this Permit, the Permittee, if required by the District, shall remove at its own cost, within ten (10) days after written notice, any improvements or installations placed on the right-of-way. In case of failure of the Permittee to so remove any improvements or installations, or to provide proper and continuous maintenance and repair, the District may thereupon remove the same or provide appropriate maintenance and Permittee agrees to promptly reimburse the District for actual cost thereof including all legal fees and costs, if any.
7. No assignment of this Permit or any interest therein and no subpermit for any purpose shall be made or granted by Permittee without the prior written consent of the District.
8. In the event any property belonging to, or the area occupied by the Permittee interferes with or is needed to construct, maintain or relocate any District structure, Permittee shall at his own expense, relocate, remove, lower or raise such property, within a reasonable time, when requested to do so by the District in writing.
9. Permittee shall advise the District in writing of the anticipated start of work covered by this Permit at least three (3) working days prior to the start of work. All work shall be done subject to the supervision of, and to the satisfaction of, the District. Activities and uses authorized under this Permit are subject to any instructions of the District, and all such instructions must be strictly observed.
10. Permittee shall file and maintain, during the term of occupancy with the District, a certificate of insurance indicating coverage for public liability including premises and contractual coverage with limits no less than \$2,000,000 General Aggregate and \$2,000,000 Products/Completed Operation Aggregate and \$1,000,000 Each Occurrence. Said insurance shall name the Flood Control District of Maricopa County as additional insured and be primary. It shall be the sole responsibility of the Permittee to maintain coverage in force in compliance with the above provisions.
11. Notwithstanding the expiration date above, this Permit is revocable by the District upon 10 days written notice to the Permittee.
12. It is mutually understood and agreed that this permit shall be governed by the laws of the State of Arizona, both as to interpretation and performance. Any action at law, suit in equity, or judicial proceeding for the enforcement of this permit, or any provision thereof, shall be instituted only in the courts of the State of Arizona.

Legal Relationship to Owner:

City (in or near): Phoenix Side of Highway: N  S  E  W  (check one)

Highway Route No. 143 Ops Yard Approximately \_\_\_\_\_ Feet N  S  E  W  (check one) of Milepost No 2-3

Project No. or Parcel No.: Parcel 125-17-007L Project Duration : one month

Description of the proposed work or activity in the right-of-way: Install a temporary soil gas test boring using a truck mounted sampling probe to a depth of 15 feet in the parking lot pavement of the maintenance yard located south of McDowell Road and west of SR143. Soil gas samples would be taken from the test boring at 5 feet and 15 feet and analyzed for specific volatile organic compounds (VOCs) that are known to occur in the groundwater beneath the ADOT maintenance yard. The test boring will be temporarily sealed with a traffic rated, flush-mounted vault to allow for a second round of sampling about one or two weeks later. Following completion of sampling, the boring will be abandoned and the pavement will be patched and restored to presampling conditions. This is part of the Motorola Superfund Site.

The Encroachment Owner will be the Permittee. By signing this application, the Encroachment Owner/Permittee and the Applicant hereby acknowledges that the information given and statements made in this application are true and correct to the best of his/her knowledge. The Encroachment Owner agrees as the Permittee to accept the following General Obligations and Responsibilities as described on page 2 of the application. By accepting an approved encroachment permit, the Permittee agrees to the requirements described in the permit, to be responsible for all permit requirements, and to comply with ADOT's requirements as set out in the permit. An approved permit consists of this application, final supporting documentation approved by ADOT, and any requirements set by ADOT. If the Permittee disagrees with the requirements, the Permittee shall return the permit immediately to the District Office.

NO WORK SHALL TAKE PLACE INSIDE THE RIGHT OF WAY WITHOUT AN APPROVED PERMIT ON SITE.

GENERAL OBLIGATIONS AND RESPONSIBILITIES

THE PERMITTEE AND/OR APPLICANT AGREES TO THE FOLLOWING:

1. Assume all legal liability and financial responsibility for the encroachment activity for the duration of the encroachment, including indemnify, defend, and hold ADOT and the State of Arizona and any of it's agents, directors, officers, employees harmless from and against any and all claims, actions, losses, liabilities, costs, damages, or expenses, including court costs, reasonable attorney's fees, and costs of claim processing and investigation, arising out of bodily injury or death of any person, or tangible or intangible property damage, caused, or alleged to be caused, in whole or in part, by the negligent or willful acts, or omissions of the Permittee, any of its directors, officers, agents, employees, or volunteers, or its contractor or subcontractors. This indemnity includes any claim or amount arising out of or recovered under the Workers' Compensation Law or arising out of the contractor's failure to conform to any federal, state or local law, statute, ordinance, rule, regulation or court decree. The Permittee is not responsible for claims arising solely from ADOT's negligent or willful acts or omissions. The Permittee and/or contractors and subcontracts may be required to procure insurance with specified limits naming the State of Arizona and ADOT as additional insureds.
2. Comply with Environmental Laws. A. Environmental Laws refers collectively to any and all federal, state, or local statute, law, ordinance, code, rule, regulation, permit, order, or decree regulating, relating to, or imposing liability or standards of conduct on a person discharging, releasing or threatening to discharge or release or causing the discharge or release of any hazardous or solid waste or any hazardous substance, pollutant, contaminant, water, wastewater or storm water, and specifically includes, but is not limited to: The Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act; the Comprehensive Environmental Response, Compensation and Liability Act, as amended; the Toxic Substances Control Act; the Clean Water Act (CWA); the Clean Air Act; the Occupational Safety and Health Act; the Arizona Water Quality Act Revolving Fund Act, the Arizona Hazardous Waste Management Act, any applicable National Pollutant Discharge Elimination System (NPDES) or Arizona Pollution Discharge Elimination System (AZPDES) permit, any applicable CWA Section 404 permit, or any local pretreatment or environmental nuisance ordinance.
  - B. The Permittee specifically agrees that in the course of performing any activity for which this Permit is necessary:
    - i. To comply with any and all Environmental Laws;
    - ii. To ensure that no activity under this Permit shall cause ADOT to be in violation of any Environmental Laws;
    - iii. That if the Permittee fails or refuses to comply with any Environmental Laws, or causes ADOT to be in violation of any Environmental Laws, ADOT may at its sole and unreviewable discretion, (1) revoke this Permit; (2) require the Permittee to undertake corrective or remedial action to address any release or threatened release or discharge of the hazardous substance, pollutant or contaminant, water, wastewater or storm water; and (3) expressly consents to entry of injunctive relief to enforce any listed remedies.
    - iv. To indemnify ADOT for any losses, damages, expenses, penalties, liabilities or claims of any nature whatsoever suffered by or asserted against ADOT as a direct or indirect result of the disposal, escape, seepage, leakage, spillage, discharge, emission, or release of any hazardous waste, solid waste, hazardous substance, pollutant or contaminant, water, wastewater or storm water and losses, damages, expenses, penalties, liabilities and claims asserted or arising under the Environmental Laws, or for ADOT's costs in undertaking corrective action pursuant to an order of or settlement with a duly authorized regulatory agency or injured third party or for any penalties associated with Permittee's activities;
3. Be responsible for any repair or maintenance work to the encroachment for the duration of the encroachment;
4. Comply with ADOT's traffic control standards;
5. Obtain written approval from the abutting property owner (and/or underlying fee owner where ADOT owns its right of way by easement) if the encroachment encroaches on abutting property owned by someone other than the permittee (and/or on underlying fee land owned by someone other than the permittee where ADOT owns its right of way by easement).
6. Upon notice from ADOT, repair any aspect or condition of the encroachment that causes danger or hazard to the traveling public;
7. Remove the encroachment and restore the right-of-way to its original or better condition if ADOT cancels the encroachment permit, and terminates all rights under the permit;
8. Reimburse ADOT for costs incurred or deposit with ADOT money necessary to cover all costs incurred for activities related to the encroachment, such as inspections, restoring the right-of-way to its original or better condition, removing the encroachment, or repair encroachment to originally permitted condition;
9. Notify a new owner to apply for an encroachment permit, as required by Arizona Administrative Rule R17-3-502(D);
10. Apply for a new encroachment permit if the use of the permitted encroachment changes;
11. Keep a copy of the encroachment permit at the work site or site of encroachment activity;
12. Construct the encroachment according to plans that ADOT approves as part of the final permit;
13. Obtain required permits from other government agencies or political subdivisions;
14. Remove any defective materials, or materials that fail to pass ADOT's final inspection, and replace with materials ADOT specifies.
15. If the permit application is denied, applicant has a right to a hearing as prescribed in Arizona Administrative Rule, R17-3-509.

FOR ADOT USE  
PERMIT TO USE STATE HIGHWAY RIGHT-OF-WAY

This application is approved as a permit and a permit is issued to the Permittee. Construction is authorized only for the period indicated below.

Re: Extension to ADOT Permit No: 1207559  
Location: SR-143(NB) @ 2.000-3.000

Dear Jean,

At your request the above referenced permit has been extended from May 3, 2011 to, October 31, 2011. Be sure that a copy of this letter as well as a copy of the original permit are on the job site at all times.

If I may be of any further assistance to you, please feel free to contact me at 602-712-7522.

Sincerely,

  
Dwight D. Loy  
Permits Supervisor

## ACCESS AGREEMENT FOR ENVIRONMENTAL SAMPLING

This Access Agreement for Environmental Sampling (Access Agreement) is made and entered into this \_\_\_\_\_ day of \_\_\_\_\_, 2011, by and between \_\_\_\_\_ (hereinafter "Owner") and FREESCALE SEMICONDUCTOR, INC., a Delaware corporation (hereinafter "Freescale").

### RECITALS

A. \_\_\_\_\_ is the owner and/or authorized agent of the \_\_\_\_\_ in Maricopa County, Arizona, located at \_\_\_\_\_ and identified in Exhibit "A" attached hereto (hereinafter "the Property").

B. Freescale, under the oversight of the U.S. Environmental Protection Agency (EPA), will be conducting a soil gas sampling program in the vicinity of the former Motorola 52<sup>nd</sup> Street facility as part of a Soil Vapor Intrusion to Indoor Air Pathway Evaluation being conducted under an Administrative Order on Consent with EPA; depending on the results of the soil gas sampling, Freescale may also be conducting a subslab/crawl space and/or indoor air sampling program if required by EPA; and

NOW, THEREFORE, for valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties agree as follows:

1) Easement for Access.

a) Owner hereby grants to Freescale, its employees, consultants, and contractors, and EPA and its contractors, a nonexclusive right, easement and privilege for ingress and egress over, across and under the Property to install one or more temporary soil gas borings at the approximate location(s) shown on Exhibit A and perform soil gas sampling at that location or locations. The proposed soil gas sampling boring design is shown on Exhibit B. Freescale's contractor shall perform utility clearance activities at the Property prior to installation.

b) Access shall include pedestrian and vehicular access. Freescale shall consult with Owner in advance of any installation and/or sampling to coordinate a date and timeframe for access that is agreeable to Owner.

c) If additional soil gas sampling is necessary, or if subslab/crawl space and/or indoor/outdoor air sampling is required by EPA, Freescale shall submit to Owner the proposed location(s) and a schedule for installation/sampling at the Property for Owner's approval prior to conducting the installation or sampling. Approval of additional soil gas locations, subslab/crawl space and/or indoor/outdoor air sampling, including any proposed location or schedule, is **at the sole discretion of Owner**. Any additional soil gas sampling, subslab/crawl space and/or indoor/outdoor air sampling location and schedule approved by Owner becomes an enforceable part of this Access Agreement.

2. Term of Easement. This Access Agreement shall commence on the date first written above and shall run for a period six (6) months, or until the earlier date of completion of the EPA-required evaluation as evidenced by approval by EPA of a final report from Freescale to EPA. Upon termination of the access or completion of the evaluation, Freescale shall have sixty (60) days to conduct the work described in Paragraph 5 of this Agreement.

3. Inspection by Owner. Owner shall have the right to inspect the activity conducted pursuant to Paragraph 1 of this Agreement at any time without prior notification.

4. Provision of Sampling Data. In consideration of the rights granted to Freescale herein, and as reasonable compensation to Owner, Freescale shall, at Owner's request, supply Owner, or its designee, with the results (including laboratory analysis data sheets) of all sampling performed at the Property.

5. Completion of the Sampling. Upon completion of the sampling activity, Freescale shall restore the Property to a condition substantially similar to that existing at the time immediately preceding Freescale's, or its agents', consultants', or contractors' entry onto the Property for sampling. Freescale will abandon soil gas borings in place in accordance with applicable federal and state standards.

6. Compliance with Laws. Freescale shall comply with all applicable laws in conducting the sampling. In addition, Freescale shall obtain all permits and other government approvals required to undertake such actions. All companies retained by Freescale for any of the work will be duly licensed or otherwise qualified under law for such activities by the applicable federal, state or local authority.

7. Indemnification. Freescale hereby agrees to indemnify, defend and hold harmless Owner from any and all damages, claims, liabilities, costs, and expenses (including reasonable attorneys' fees and actual court costs) (the "Loss") incurred by or asserted against Owner and arising from the soil gas or subslab/crawl space and/or indoor/outdoor air sampling, or entry by Freescale or its employees, agents, consultants or contractors upon the Property; provided, however, that Freescale shall have no such indemnification obligation pursuant to this paragraph to the extent that the Loss is caused by the negligence or intentional acts, errors, or omissions of Owner, its employees, agents or representatives, or Owner's successors or assigns. This right of indemnification shall survive the termination of this Agreement, but shall be limited to events that occur during the term of this Agreement or until completion of the evaluation, whichever is earlier.

8. Notices. Any notices to either party by the other shall be in writing and delivered in person, by registered mail, or by facsimile addressed as follows, or delivered elsewhere as either party may designate by written notice to the other:

Tempe, Arizona 85284

Phone: (480) 413-3290

Fax: (480) 413-3100

9. Miscellaneous.

- (a) This Access Agreement is governed by the laws of the State of Arizona.
- (b) Owner hereby represents and warrants to Freescale that Owner is the owner of the Property or authorized agent of the Owner, and that no approval or consent by any other provision or entity is necessary or required before this Access Agreement will be effective or may be exercised.
- (c) This Access Agreement shall inure to the benefit of and be binding upon the successors and assigns of the parties, including future transferees of the Property.

IN WITNESS WHEREOF, the parties have executed this Agreement to be effective as of the date first written above.

 Volume of Sandpack =  $(D_{\text{bore}}/2)^2 * 3.14 * H_{\text{sandpack}} * 0.3 * 16.3866$

Shallow Tubing Diameter (in)	1.25
Length of Shallow Tubing (ft)	7
Borehole Diameter (in)	2.5
Height of Sand (Shallow)(in)	12
Purge Volume of Tubing (ml)	67.5
Purge Volume of Sandpack (ml)	289
Purge Volume of Tubing+Sandpack (ml)	357 <sup>cc</sup> 502

Deep Tubing Diameter (in)	1.25
Length of Deep Tubing (ft)	17
Borehole Diameter (in)	2.5
Height of Sand (Deep) (in)	13
Purge Volume of Tubing (ml)	164
Purge Volume of Sandpack (ml)	313.5
Purge Volume of Tubing+Sandpack (ml)	478

\*\*\*434

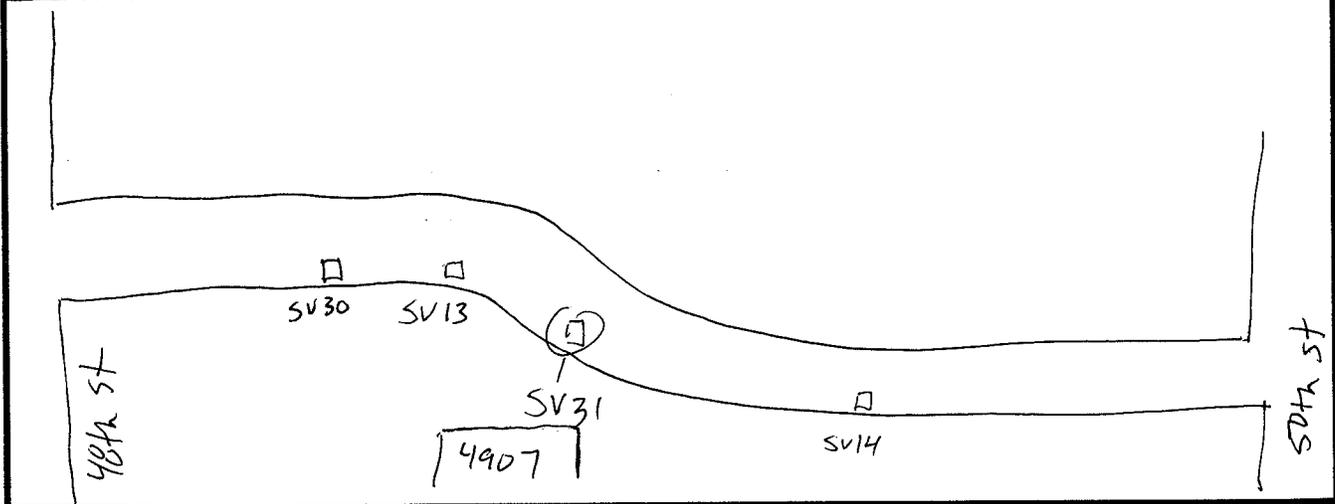

\*\* ~1.5X usual vol. of sand and 2X usual vol. of bentonite chips were required to fill borehole to depth - suggests a void in annulus?  
 \*\*\* Because of extra sand the purge volume of sand was increased by 1.5.

DAILY FIELD ACTIVITY REPORT  
SOIL GAS SAMPLING INVESTIGATION

52ND STREET SUPERFUND SITE, OU1 AREA, PHOENIX, ARIZONA

Date:

Field Staff:

Well ID (SV01 - SV25)	SV25-15	SV25-5	SV24-15	SV24-5	Soil Gas Human Health Screening Levels (SGHHSUs)
Well Constructed	4/18/11	4/18/11	4/18/11	4/18/11	Residential
Well Sampled	4/18/11				(ug/m <sup>3</sup> )
<b>Detected Compound Summary (Reported in ug/m<sup>3</sup>)</b>					
Bromodichloromethane					29
Carbon Tetrachloride					180
Chlorobenzene					23,000
Chloroform					48
1,1-Dichloroethane					650
1,2-Dichloroethane (EDC)					41
1,1-Dichloroethene					91,000
cis-1,2-Dichloroethene					27,000
trans-1,2-Dichloroethene					27,000
Methylene Chloride (Dichloromethane)					2,300
1,1,2,2-Tetrachloroethane					18
Tetrachloroethene (PCE)					180
1,1,1-Trichloroethane					2,300,000
1,1,2-Trichloroethane					65
Trichloroethene (TCE)					520
Trichlorofluoroethane (F113)					13,000,000
Vinyl Chloride					70

**Daily Written Summary**

- 1) Description of daily activities
- 2) Sampling data results summary
- 3) Anticipated activities for following day (including schedule updates with respect to overall project schedule)
- 4) Description of any problems/delays encountered during field activities and solutions implemented
- 5) Step-out boring description and rationale for locations (if applicable)

1) Wells SV24 and SV25 were drilled and constructed. SV25-15 was sampled, resampled, and a duplicate sample. The well was resampled due to the result being above the calibration level of the equipment.  
 2) Sample results are attached.  
 3) Sampling will continue with SV25-5 and SV24-15 and SV24-5

1) Drill & construct wells SV09, SV08, SV07, and SV06. Sample wells SV13, SV09 and SV08, Resample SV14-15 and SV13-15 with an extra 2 purge volumes to make three altogether

2) All wells sampled had low results

3) Tomorrow wells to be sampled SV07, SV06, SV02 and SV18, wells drilled SV02, SV18, SV19, SV20

4) Purge volumes were only at 1 volume, 2 wells were resampled with 2 more purge volumes added before the sample in order to compare results.

Well Sampled	SV23	4/12/11	4/22/11	4/22/11
<b>Detected Compound Summary (Reported in ug/m3)</b>				
Bromodichloromethane				29
Carbon Tetrachloride				180
Chlorobenzene				23,000
Chloroform				48
1,1-Dichloroethane				650
1,2-Dichloroethane (EDC)				41
1,1-Dichloroethene				91,000
cis-1,2-Dichloroethene				27,000
trans-1,2-Dichloroethene				27,000
Methylene Chloride (Dichloromethane)				2,300
1,1,2,2-Tetrachloroethane				18
Tetrachloroethene (PCE)				180
1,1,1-Trichloroethane				2,300,000
1,1,2-Trichloroethane				65
Trichloroethene (TCE)				520
Trichlorofluoroethane (F113)				13,000,000
Vinyl Chloride				70

**Daily Written Summary**

- 1) Description of daily activities
- 2) Sampling data results summary
- 3) Anticipated activities for following day (including schedule updates with respect to overall project schedule)
- 4) Description of any problems/delays encountered during field activities and solutions implemented
- 5) Step-out boring description and rationale for locations (if applicable)

1) Wells drilled & constructed SV23 and SV12. Wells sampled SV07 and SV06.

3) Boring will continue with SV01, SV10, SV11, and SV11. Sampling will continue with wells SV07, SV12 and SV01  
 4) SV18 had problems head augering and exposed some COX line. Will try again Monday  
 SV02 had problems with analytical equipment in the lab, will try again tomorrow

- 3) Anticipated activities for following day (including schedule updates with respect to overall project schedule)
- 4) Description of any problems/delays encountered during field activities and solutions implemented
- 5) Step-out boring description and rationale for locations (if applicable)

1) Wells drilled and constructed SV27, SV28, SV29, SV33 and SV34, wells sampled for confirmation SV24, SV05, SV04. A summa canister was collected as a duplicate for SV04-15 and an equipment blank was collected in a summa canister.

2) Wells SV24 and SV04-15 were high and SV05 was low.

3) Sampling step out locations and sampling with the EPA consultant.

4) Stopped sampling early to fill Nitrogen containers in lab.

**DAILY FIELD ACTIVITY REPORT  
SOIL GAS SAMPLING INVESTIGATION  
52ND STREET SUPERFUND SITE, OU1 AREA, PHOENIX, ARIZONA**

Date: 5/6/94  
Field Staff: RB, RT

Well ID (SV01 - SV25)	SV20	SV18	SV35	SV46	SV36	Soil Gas Human Health Screening Levels (SGHSLs)
Well Constructed						
Well Sampled	5/6	5/6	5/6	5/6	5/6	Residential (ug/m <sup>3</sup> )
<b>Detected Compound Summary (Reported in ug/m<sup>3</sup>)</b>						
Bromodichloromethane						29
Carbon Tetrachloride						180
Chlorobenzene						23,000
Chloroform						48
1,1-Dichloroethane						650
1,2-Dichloroethane (EDC)						41
cis-1,2-Dichloroethane						91,000
trans-1,2-Dichloroethane						27,000
Methylene Chloride (Dichloromethane)						27,000
1,1,2,2-Tetrachloroethane						2,300
Tetrachloroethene (PCE)						18
1,1,1-Trichloroethane						180
1,1,2-Trichloroethane						2,300,000
Trichloroethene (TCE)						66
Trichlorofluoroethane (F113)						520
Vinyl Chloride						13,000,000
						70

**Daily Written Summary**

- 1) Description of daily activities
- 2) Sampling data results summary
- 3) Anticipated activities for following day (including schedule updates with respect to overall project schedule)
- 4) Description of any problems/delays encountered during field activities and solutions implemented
- 5) Step-out boring description and rationale for locations (if applicable)

1) Sampled wells SV20, 18, 35, 45 and 36. Replica sample on SV20-15  
 2) Test results. High results were found on SV20, SV35, SV45-15  
 low results were found on SV18, SV45-5

3) On Monday start sampling SV19, 27, 28, 29, 33 and 34

H&P Project: MC041811-A2  
Client Project: Task Order 2011-01/ Motorola

Dear Todd Cruse:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 4/18/2011 -4/23/2011 which were analyzed in accordance with the attached Chain of Custody record(s).

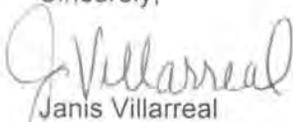

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody

Unless otherwise noted, all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

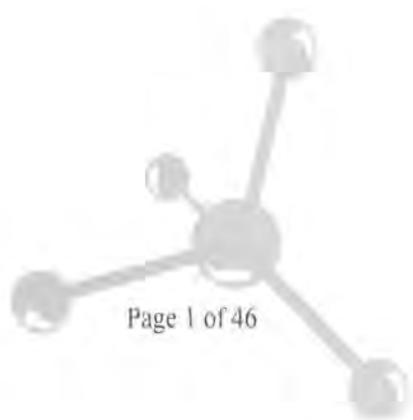

Sincerely,

  
Janis Villarreal  
Laboratory Director

## Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the Environmental Laboratory Accreditation Program (CA) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste for the following methods:

Certificate# 2741, 2743, 2579, 2754 & 2740 approved for EPA 8260 and LUFT GC/MS  
Certificate# 2742, 2745, & 2741 approved for LUFT  
Certificate# 2745 & 2742 approved for EPA 418.1

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the National Environmental Accreditation Conference Standards for the category Environmental Analysis Air and Emissions for the following analytes and methods:

1,2,4-Trichlorobenzene by EPA TO-15 & TO-14A  
Hexachlorobutadiene by EPA TO-15 & TO-14A  
1,2,4-Trimethylbenzene by EPA TO -14A  
1,2-Dichlorobenzene by EPA TO-15 & TO-14A  
1,3,5-Trimethylbenzene by EPA TO -14A  
1,4-Dichlorobenzene by EPA TO-15 & TO-14A  
Benzene by EPA TO-15 & TO-14A  
Chlorobenzene by EPA TO-15 & TO-14A  
Ethyl benzene by EPA TO-15 & TO-14A  
Styrene by EPA TO-15 & TO-14A  
Toluene by EPA TO-15 & TO-14A  
Total Xylenes by EPA TO-15 & TO-14A  
1,1,1-Trichloroethane by EPA TO-15 & TO-14A  
1,1,2,2-Tetrachloroethane by EPA TO-15 & TO-14A  
1,1,2-Trichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethene by EPA TO-15 & TO-14A  
1,2-Dichloroethane by EPA TO-15 & TO-14A  
1,2-Dichloropropane by EPA TO-15 & TO-14A  
Bromoform by EPA TO-15  
Bromomethane by EPA TO-15 & TO-14A  
Carbon tetrachloride by EPA TO-15 & TO-14A  
Chloroethane by EPA TO-15  
Chloroform by EPA TO-15 & TO-14A  
Chloromethane by EPA TO-15 & TO-14A  
cis-1,2-Dichloroethene by EPA TO-15  
cis-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Methylene chloride by EPA TO -15 & TO-14A  
Tetrachloroethane by EPA TO-15 & TO-14A  
trans-1,2-Dichloroethene by EPA TO-15  
trans-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Trichloroethene by EPA TO-15 & TO-14A  
Vinyl chloride by EPA TO -15 & TO-14A  
2-Butanone by EPA TO-15  
4-Methyl-2-Pentanone by EPA TO-15  
Hexane by EPA TO-15  
Methyl tert-butyl ether by EPA TO-15  
Vinyl acetate by EPA TO-15

This certification applies to samples analyzed in summa canisters.

H&P Project: MC041811-A2  
Client Project: Task Order 2011-01 / Motorola

Dear Todd Cruse:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 4/25/2011 -4/29/2011 which were analyzed in accordance with the attached Chain of Custody record(s).

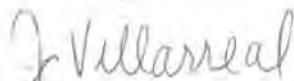

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody

Unless otherwise noted, all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

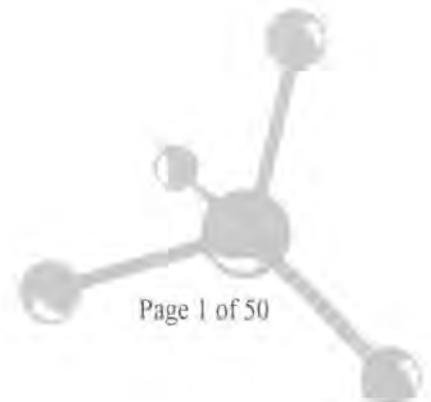

Sincerely,

  
Janis Villarreal  
Laboratory Director

H&P Mobile Geochemistry, Inc. operates under CA Environmental Lab Accreditation Program Numbers 2579, 2740, 2741, 2742, 2743, 2745 and 2754. National Environmental Laboratory Accreditation Conference (NELAC) Standards Lab #11845

Two duplicates, SV22-15 Dup and SV18-15 Dup, were collected and analyzed on April 25, 2011. According to H&P's TO-15 SOP, vapor samples collected in a syringe should be analyzed and/or prepared appropriately within 15 minutes of sample collection. Sample SV22-15 Dup exceeded the 15 minute requirement for analysis or preparation. Both duplicates have been reported.

## Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the Environmental Laboratory Accreditation Program (CA) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste for the following methods:

Certificate# 2741, 2743, 2579, 2754 & 2740 approved for EPA 8260 and LUFT GC/MS  
Certificate# 2742, 2745, & 2741 approved for LUFT  
Certificate# 2745 & 2742 approved for EPA 418.1

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the National Environmental Accreditation Conference Standards for the category Environmental Analysis Air and Emissions for the following analytes and methods:

1,2,4-Trichlorobenzene by EPA TO-15 & TO-14A  
Hexachlorobutadiene by EPA TO-15 & TO-14A  
1,2,4-Trimethylbenzene by EPA TO -14A  
1,2-Dichlorobenzene by EPA TO-15 & TO-14A  
1,3,5-Trimethylbenzene by EPA TO -14A  
1,4-Dichlorobenzene by EPA TO-15 & TO-14A  
Benzene by EPA TO-15 & TO-14A  
Chlorobenzene by EPA TO-15 & TO-14A  
Ethyl benzene by EPA TO-15 & TO-14A  
Styrene by EPA TO-15 & TO-14A  
Toluene by EPA TO-15 & TO-14A  
Total Xylenes by EPA TO-15 & TO-14A  
1,1,1-Trichloroethane by EPA TO-15 & TO-14A  
1,1,2,2-Tetrachloroethane by EPA TO-15 & TO-14A  
1,1,2-Trichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethene by EPA TO-15 & TO-14A  
1,2-Dichloroethane by EPA TO-15 & TO-14A  
1,2-Dichloropropane by EPA TO-15 & TO-14A  
Bromoform by EPA TO-15  
Bromomethane by EPA TO-15 & TO-14A  
Carbon tetrachloride by EPA TO-15 & TO-14A  
Chloroethane by EPA TO-15  
Chloroform by EPA TO-15 & TO-14A  
Chloromethane by EPA TO-15 & TO-14A  
cis-1,2-Dichloroethene by EPA TO-15  
cis-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Methylene chloride by EPA TO -15 & TO-14A  
Tetrachloroethane by EPA TO-15 & TO-14A  
trans-1,2-Dichloroethene by EPA TO-15  
trans-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Trichloroethene by EPA TO-15 & TO-14A  
Vinyl chloride by EPA TO -15 & TO-14A  
2-Butanone by EPA TO-15  
4-Methyl-2-Pentanone by EPA TO-15  
Hexane by EPA TO-15  
Methyl tert-butyl ether by EPA TO-15  
Vinyl acetate by EPA TO-15

This certification applies to samples analyzed in summa canisters.

H&P Project: MC041811-A2  
Client Project: Task Order 2011-01 / Motorola

Dear Todd Cruse:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 5/2/2011 -5/6/2011 which were analyzed in accordance with the attached Chain of Custody record(s).

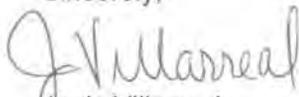

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody

Unless otherwise noted, all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

  
Janis Villarreal  
Laboratory Director

### ANALYTICAL REPORT FOR SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
SV36-5, P203cc	E105014-11	Vapor	06-May-11	06-May-11

The Bromodichloromethane recovery exceeded the method criteria in the continuing calibration on May 5, 2011. The percent recovery for this compound in the LCS, however, was acceptable, indicating that the instrument was operating properly.

### Notes and Definitions

- QL-1H The LCS and/or LCSD recoveries fell above the established control specifications for this analyte. Any result for this compound is qualified and should be considered biased high.
- C-06 The daily calibration for this compound was greater than the desired +/- % deviation; therefore, this concentration is an estimated value.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

## Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the Environmental Laboratory Accreditation Program (CA) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste for the following methods:

Certificate# 2741, 2743, 2579, 2754 & 2740 approved for EPA 8260 and LUFT GC/MS  
Certificate# 2742, 2745, & 2741 approved for LUFT  
Certificate# 2745 & 2742 approved for EPA 418.1

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the National Environmental Accreditation Conference Standards for the category Environmental Analysis Air and Emissions for the following analytes and methods:

1,2,4-Trichlorobenzene by EPA TO-15 & TO-14A  
Hexachlorobutadiene by EPA TO-15 & TO-14A  
1,2,4-Trimethylbenzene by EPA TO-14A  
1,2-Dichlorobenzene by EPA TO-15 & TO-14A  
1,3,5-Trimethylbenzene by EPA TO-14A  
1,4-Dichlorobenzene by EPA TO-15 & TO-14A  
Benzene by EPA TO-15 & TO-14A  
Chlorobenzene by EPA TO-15 & TO-14A  
Ethyl benzene by EPA TO-15 & TO-14A  
Styrene by EPA TO-15 & TO-14A  
Toluene by EPA TO-15 & TO-14A  
Total Xylenes by EPA TO-15 & TO-14A  
1,1,1-Trichloroethane by EPA TO-15 & TO-14A  
1,1,2,2-Tetrachloroethane by EPA TO-15 & TO-14A  
1,1,2-Trichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethene by EPA TO-15 & TO-14A  
1,2-Dichloroethane by EPA TO-15 & TO-14A  
1,2-Dichloropropane by EPA TO-15 & TO-14A  
Bromoform by EPA TO-15  
Bromomethane by EPA TO-15 & TO-14A  
Carbon tetrachloride by EPA TO-15 & TO-14A  
Chloroethane by EPA TO-15  
Chloroform by EPA TO-15 & TO-14A  
Chloromethane by EPA TO-15 & TO-14A  
cis-1,2-Dichloroethene by EPA TO-15  
cis-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Methylene chloride by EPA TO-15 & TO-14A  
Tetrachloroethane by EPA TO-15 & TO-14A  
trans-1,2-Dichloroethene by EPA TO-15  
trans-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Trichloroethene by EPA TO-15 & TO-14A  
Vinyl chloride by EPA TO-15 & TO-14A  
2-Butanone by EPA TO-15  
4-Methyl-2-Pentanone by EPA TO-15  
Hexane by EPA TO-15  
Methyl tert-butyl ether by EPA TO-15  
Vinyl acetate by EPA TO-15

This certification applies to samples analyzed in summa canisters.

Scottsdale, AZ 85251-5499

H&P Project: MC041811-A2  
Client Project: Task Order 2011-01 / Motorola

Dear Todd Cruse:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 5/9/2011 -5/13/2011 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody

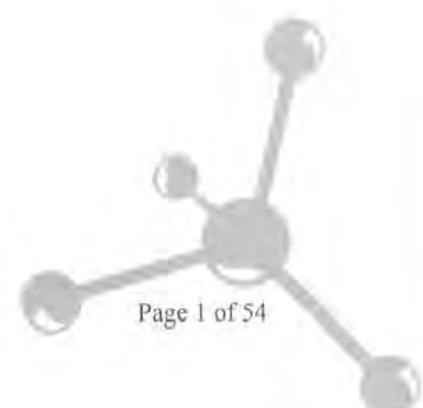

Unless otherwise noted, all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

*J. Villarreal*  
Janis Villarreal  
Laboratory Director

### ANALYTICAL REPORT FOR SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
SV65-15, P453cc	E105041-08	Vapor	13-May-11	13-May-11
SV65-5, P357cc	E105041-09	Vapor	13-May-11	13-May-11
SV58-15, P453cc	E105041-10	Vapor	13-May-11	13-May-11
SV58-5, P357cc	E105041-11	Vapor	13-May-11	13-May-11
SV57-15, P471cc	E105041-12	Vapor	13-May-11	13-May-11

The Bromodichloromethane percent recovery exceeded the method criteria in the continuing calibration verification on May 11, 2011.  
The Bromodichloromethane result for sample SV37-15, PV459cc, analyzed on May 11, 2011, has been qualified accordingly.

### Notes and Definitions

- S-GC Surrogate recovery outside of control limits. The data was accepted based on valid recovery of the remaining surrogate(s).
- C-06 The daily calibration for this compound was greater than the desired +/- % deviation; therefore, this concentration is an estimated value.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

## Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the Environmental Laboratory Accreditation Program (CA) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste for the following methods:

Certificate# 2741, 2743, 2579, 2754 & 2740 approved for EPA 8260 and LUFT GC/MS  
Certificate# 2742, 2745, & 2741 approved for LUFT  
Certificate# 2745 & 2742 approved for EPA 418.1

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the National Environmental Accreditation Conference Standards for the category Environmental Analysis Air and Emissions for the following analytes and methods:

1,2,4-Trichlorobenzene by EPA TO-15 & TO-14A  
Hexachlorobutadiene by EPA TO-15 & TO-14A  
1,2,4-Trimethylbenzene by EPA TO-14A  
1,2-Dichlorobenzene by EPA TO-15 & TO-14A  
1,3,5-Trimethylbenzene by EPA TO-14A  
1,4-Dichlorobenzene by EPA TO-15 & TO-14A  
Benzene by EPA TO-15 & TO-14A  
Chlorobenzene by EPA TO-15 & TO-14A  
Ethyl benzene by EPA TO-15 & TO-14A  
Styrene by EPA TO-15 & TO-14A  
Toluene by EPA TO-15 & TO-14A  
Total Xylenes by EPA TO-15 & TO-14A  
1,1,1-Trichloroethane by EPA TO-15 & TO-14A  
1,1,2,2-Tetrachloroethane by EPA TO-15 & TO-14A  
1,1,2-Trichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethene by EPA TO-15 & TO-14A  
1,2-Dichloroethane by EPA TO-15 & TO-14A  
1,2-Dichloropropane by EPA TO-15 & TO-14A  
Bromoform by EPA TO-15  
Bromomethane by EPA TO-15 & TO-14A  
Carbon tetrachloride by EPA TO-15 & TO-14A  
Chloroethane by EPA TO-15  
Chloroform by EPA TO-15 & TO-14A  
Chloromethane by EPA TO-15 & TO-14A  
cis-1,2-Dichloroethene by EPA TO-15  
cis-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Methylene chloride by EPA TO-15 & TO-14A  
Tetrachloroethane by EPA TO-15 & TO-14A  
trans-1,2-Dichloroethene by EPA TO-15  
trans-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Trichloroethene by EPA TO-15 & TO-14A  
Vinyl chloride by EPA TO-15 & TO-14A  
2-Butanone by EPA TO-15  
4-Methyl-2-Pentanone by EPA TO-15  
Hexane by EPA TO-15  
Methyl tert-butyl ether by EPA TO-15  
Vinyl acetate by EPA TO-15

This certification applies to samples analyzed in summa canisters.

H&P Project: MC041811-A2  
Client Project: Task Order 2011-01 / Motorola

Dear Todd Cruse:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 5/16/2011 -5/23/2011 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody

Unless otherwise noted, all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

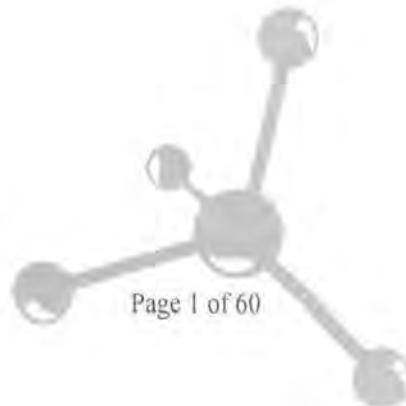

Sincerely,

Janis Villarreal  
Laboratory Director

## Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the Environmental Laboratory Accreditation Program (CA) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste for the following methods:

Certificate# 2741, 2743, 2579, 2754 & 2740 approved for EPA 8260 and LUFT GC/MS  
Certificate# 2742, 2745, & 2741 approved for LUFT  
Certificate# 2745 & 2742 approved for EPA 418.1

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the National Environmental Accreditation Conference Standards for the category Environmental Analysis Air and Emissions for the following analytes and methods:

1,2,4-Trichlorobenzene by EPA TO-15 & TO-14A  
Hexachlorobutadiene by EPA TO-15 & TO-14A  
1,2,4-Trimethylbenzene by EPA TO-14A  
1,2-Dichlorobenzene by EPA TO-15 & TO-14A  
1,3,5-Trimethylbenzene by EPA TO-14A  
1,4-Dichlorobenzene by EPA TO-15 & TO-14A  
Benzene by EPA TO-15 & TO-14A  
Chlorobenzene by EPA TO-15 & TO-14A  
Ethyl benzene by EPA TO-15 & TO-14A  
Styrene by EPA TO-15 & TO-14A  
Toluene by EPA TO-15 & TO-14A  
Total Xylenes by EPA TO-15 & TO-14A  
1,1,1-Trichloroethane by EPA TO-15 & TO-14A  
1,1,2,2-Tetrachloroethane by EPA TO-15 & TO-14A  
1,1,2-Trichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethene by EPA TO-15 & TO-14A  
1,2-Dichloroethane by EPA TO-15 & TO-14A  
1,2-Dichloropropane by EPA TO-15 & TO-14A  
Bromoform by EPA TO-15  
Bromomethane by EPA TO-15 & TO-14A  
Carbon tetrachloride by EPA TO-15 & TO-14A  
Chloroethane by EPA TO-15  
Chloroform by EPA TO-15 & TO-14A  
Chloromethane by EPA TO-15 & TO-14A  
cis-1,2-Dichloroethene by EPA TO-15  
cis-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Methylene chloride by EPA TO-15 & TO-14A  
Tetrachloroethane by EPA TO-15 & TO-14A  
trans-1,2-Dichloroethene by EPA TO-15  
trans-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Trichloroethene by EPA TO-15 & TO-14A  
Vinyl chloride by EPA TO-15 & TO-14A  
2-Butanone by EPA TO-15  
4-Methyl-2-Pentanone by EPA TO-15  
Hexane by EPA TO-15  
Methyl tert-butyl ether by EPA TO-15  
Vinyl acetate by EPA TO-15

This certification applies to samples analyzed in summa canisters.

July 14, 2011

## LABORATORY REPORT

**Client:**

Clear Creek Associates (Phoenix)  
6155 E. Indian School Rd., Suite 200  
Scottsdale, AZ 85251  
Attn: Todd Cruse

Work Order: PUF0824  
Project Name: Motorola Air  
Project Number: Motorola 52  
Date Received: 06/14/11  
Final Report: 07/14/11 14:41

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica.*

*TestAmerica Laboratories, Inc., Phoenix Laboratory certifies that the analytical results contained herein apply only to the specific sample(s) analyzed.*

*The Chain of Custody, 1 page, is included and is an integral part of this report. This entire report was reviewed and approved for release.*

If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-(602)437-3340

Analyses included in this report were performed by the laboratory shown at the top of this report unless otherwise indicated.

**CASE NARRATIVE:**

- SAMPLE RECEIPT:** Samples were received intact, at 20°C and with chain of custody documentation.
- HOLDING TIMES:** All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.
- PRESERVATION:** Samples requiring preservation were verified prior to sample analysis.
- QA/QC CRITERIA:** All analyses met method criteria, except as noted in the report with data qualifiers.

N1 = The daily second source continuing calibration verification standard recovered high and outside of acceptance limits for Methylene Chloride. All associated samples are non-detect for this analyte and therefore should not be impacted.

**COMMENTS:** No significant observations were made.

**SUBCONTRACTED:** No samples were subcontracted to an outside laboratory for analysis.

## CERTIFICATION SUMMARY

Analyses included in this report were performed by TestAmerica Phoenix, 4625 E. Cotton Center Boulevard, Building 3, Suite 189, Phoenix, AZ 85040.

TestAmerica Phoenix (Lab ID 154268) is accredited by the American Industrial Hygiene Association (AIHA) in the industrial hygiene program for the analytical techniques noted on the scope of accreditation for the following methods: NIOSH 0500, NIOSH 0600, NIOSH 1003, NIOSH 1005, NIOSH 1007, NIOSH 1010, NIOSH 1015, NIOSH 1022, NIOSH 1300, NIOSH 1400, NIOSH 1401, NIOSH 1403, NIOSH 1405, NIOSH 1450, NIOSH 1457, NIOSH 1500, NIOSH 1501, NIOSH 1550, NIOSH 1602, NIOSH 1604, NIOSH 1606, NIOSH 1609, NIOSH 1610, NIOSH 1611, NIOSH, 1613, NIOSH 1615, NIOSH 2000, NIOSH 2016, NIOSH 2532, NIOSH 2546, NIOSH 2551, NIOSH 5000, NIOSH 5503, NIOSH 5506, NIOSH 5600, NIOSH 6006, NIOSH 6009, NIOSH 6010, NIOSH 7300, NIOSH 7303, NIOSH 7600, NIOSH 7903, NIOSH 9100, NIOSH 9102, EPA IP-6A, EPA IP-6C, OSHA PV2120, OSHA 7, OSHA 42, OSHA 47, OSHA 48, OSHA 64, OSHA 69, OSHA 111, OSHA ID-140, OSHA ID-121, OSHA ID-125G, OSHA IS-215, OSHA 1001, OSHA 1002, OSHA 1003, OSHA 1004, OSHA 1005 and OSHA Chemical and Sampling Information for Silane. Volatile organic compounds on 3M Organic Vapor Monitors, Assay Technology Passive Monitors and SKC Passive Monitors. Formaldehyde and other aldehydes and ketones on Assay Technology Passive Monitor. Aldehydes and ketones by EPA TO-11A.

The TestAmerica Phoenix is also licensed through the State of Arizona (AZ0728) for EPA method TO-15.

TestAmerica Phoenix also holds NELAC accreditation through the State of Oregon (AZ100001) for the analytical techniques noted on the scope of accreditation and the State of New York (11898) for NIOSH 6009.

Samples were analyzed using methods outlined in references such as:

- OSHA - Occupational Safety and Health Administration, U. S. Department of Labor, OSHA Analytical Methods Manual.
- NIOSH - National Institute for Occupational Safety and Health, U. S. Department of Health and Human Services, NIOSH Manual of Analytical Methods, Fourth Edition, 1994, and Updates. NIOSH Method 7300 analyses are performed using a modified digestion procedure to eliminate the use of perchloric acid.
- EPA - U. S. Environmental Protection Agency, Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition, 1999.
- EPA - U. S. Environmental Protection Agency, Analytical Methods, Emission Measurement Center (EMC).

Analytical Comments:

Unless otherwise noted, all method blanks and laboratory control spikes met method and/or laboratory quality control objectives for the analyses included in this report.

Unless otherwise noted, sample results have been corrected for method blank values.

## LABORATORY REPORT

**Client:**

Clear Creek Associates (Phoenix)  
6155 E. Indian School Rd., Suite 200  
Scottsdale, AZ 85251  
Attn: Todd Cruse

Work Order: PUF0898  
Project Name: Motorola Air  
Project Number: Motorola 52  
Date Received: 06/15/11  
Final Report: 07/18/11 07:53

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica.*

*TestAmerica Laboratories, Inc., Phoenix Laboratory certifies that the analytical results contained herein apply only to the specific sample(s) analyzed.*

*The Chain of Custody, 1 page, is included and is an integral part of this report. This entire report was reviewed and approved for release.*

If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-(602)437-3340

Analyses included in this report were performed by the laboratory shown at the top of this report unless otherwise indicated.

**CASE NARRATIVE:**

**SAMPLE RECEIPT:** Samples were received intact, at 20°C and with chain of custody documentation.

**HOLDING TIMES:** All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.

**PRESERVATION:** Samples requiring preservation were verified prior to sample analysis.

**QA/QC CRITERIA:** All analyses met method criteria, except as noted in the report with data qualifiers.

N1-Methylene Chloride = The daily second source continuing calibration verification standard recovered high and outside of acceptance limits for Methylene Chloride. All associated samples are non-detect for this analyte and therefore should not be impacted.

N1-There is possible trichloroethene carryover in samples PUF0898-07 and -08. Sample results could not be confirmed. Re-analysis was not possible due to insufficient sample.

**COMMENTS:** No significant observations were made.

**SUBCONTRACTED:** No samples were subcontracted to an outside laboratory for analysis.

Approved By:

## CERTIFICATION SUMMARY

Analyses included in this report were performed by TestAmerica Phoenix, 4625 E. Cotton Center Boulevard, Building 3, Suite 189, Phoenix, AZ 85040.

TestAmerica Phoenix (Lab ID 154268) is accredited by the American Industrial Hygiene Association (AIHA) in the industrial hygiene program for the analytical techniques noted on the scope of accreditation for the following methods: NIOSH 0500, NIOSH 0600, NIOSH 1003, NIOSH 1005, NIOSH 1007, NIOSH 1010, NIOSH 1015, NIOSH 1022, NIOSH 1300, NIOSH 1400, NIOSH 1401, NIOSH 1403, NIOSH 1405, NIOSH 1450, NIOSH 1457, NIOSH 1500, NIOSH 1501, NIOSH 1550, NIOSH 1602, NIOSH 1604, NIOSH 1606, NIOSH 1609, NIOSH 1610, NIOSH 1611, NIOSH, 1613, NIOSH 1615, NIOSH 2000, NIOSH 2016, NIOSH 2532, NIOSH 2546, NIOSH 2551, NIOSH 5000, NIOSH 5503, NIOSH 5506, NIOSH 5600, NIOSH 6006, NIOSH 6009, NIOSH 6010, NIOSH 7300, NIOSH 7303, NIOSH 7600, NIOSH 7903, NIOSH 9100, NIOSH 9102, EPA IP-6A, EPA IP-6C, OSHA PV2120, OSHA 7, OSHA 42, OSHA 47, OSHA 48, OSHA 64, OSHA 69, OSHA 111, OSHA ID-140, OSHA ID-121, OSHA ID-125G, OSHA IS-215, OSHA 1001, OSHA 1002, OSHA 1003, OSHA 1004, OSHA 1005 and OSHA Chemical and Sampling Information for Silane. Volatile organic compounds on 3M Organic Vapor Monitors, Assay Technology Passive Monitors and SKC Passive Monitors. Formaldehyde and other aldehydes and ketones on Assay Technology Passive Monitor. Aldehydes and ketones by EPA TO-11A.

The TestAmerica Phoenix is also licensed through the State of Arizona (AZ0728) for EPA method TO-15.

TestAmerica Phoenix also holds NELAC accreditation through the State of Oregon (AZ100001) for the analytical techniques noted on the scope of accreditation and the State of New York (11898) for NIOSH 6009.

Samples were analyzed using methods outlined in references such as:

- OSHA - Occupational Safety and Health Administration, U. S. Department of Labor, OSHA Analytical Methods Manual.
- NIOSH - National Institute for Occupational Safety and Health, U. S. Department of Health and Human Services, NIOSH Manual of Analytical Methods, Fourth Edition, 1994, and Updates. NIOSH Method 7300 analyses are performed using a modified digestion procedure to eliminate the use of perchloric acid.
- EPA - U. S. Environmental Protection Agency, Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition, 1999.
- EPA - U. S. Environmental Protection Agency, Analytical Methods, Emission Measurement Center (EMC).

Analytical Comments:

Unless otherwise noted, all method blanks and laboratory control spikes met method and/or laboratory quality control objectives for the analyses included in this report.

Unless otherwise noted, sample results have been corrected for method blank values.

## LABORATORY REPORT

**Client:**

Clear Creek Associates (Phoenix)  
6155 E. Indian School Rd., Suite 200  
Scottsdale, AZ 85251  
Attn: Todd Cruse

Work Order: PUF1020  
Project Name: Motorola Air  
Project Number: Motorola 52  
Date Received: 06/16/11  
Final Report: 07/15/11 09:50

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica.*

*TestAmerica Laboratories, Inc., Phoenix Laboratory certifies that the analytical results contained herein apply only to the specific sample(s) analyzed.*

*The Chain of Custody, 1 page, is included and is an integral part of this report. This entire report was reviewed and approved for release.*

If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-(602)437-3340

Analyses included in this report were performed by the laboratory shown at the top of this report unless otherwise indicated.

**CASE NARRATIVE:**

- SAMPLE RECEIPT:** Samples were received intact, at 20°C and with chain of custody documentation.
- HOLDING TIMES:** All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.
- PRESERVATION:** Samples requiring preservation were verified prior to sample analysis.
- QA/QC CRITERIA:** All analyses met method criteria, except as noted in the report with data qualifiers.

N1 Methylene Chloride= The daily second source continuing calibration verification standard recovered high and outside of acceptance limits for Methylene Chloride. All associated samples are non-detect for this analyte and therefore should not be impacted.

**COMMENTS:** No significant observations were made.

**SUBCONTRACTED:** No samples were subcontracted to an outside laboratory for analysis.

## CERTIFICATION SUMMARY

Analyses included in this report were performed by TestAmerica Phoenix, 4625 E. Cotton Center Boulevard, Building 3, Suite 189, Phoenix, AZ 85040.

TestAmerica Phoenix (Lab ID 154268) is accredited by the American Industrial Hygiene Association (AIHA) in the industrial hygiene program for the analytical techniques noted on the scope of accreditation for the following methods: NIOSH 0500, NIOSH 0600, NIOSH 1003, NIOSH 1005, NIOSH 1007, NIOSH 1010, NIOSH 1015, NIOSH 1022, NIOSH 1300, NIOSH 1400, NIOSH 1401, NIOSH 1403, NIOSH 1405, NIOSH 1450, NIOSH 1457, NIOSH 1500, NIOSH 1501, NIOSH 1550, NIOSH 1602, NIOSH 1604, NIOSH 1606, NIOSH 1609, NIOSH 1610, NIOSH 1611, NIOSH, 1613, NIOSH 1615, NIOSH 2000, NIOSH 2016, NIOSH 2532, NIOSH 2546, NIOSH 2551, NIOSH 5000, NIOSH 5503, NIOSH 5506, NIOSH 5600, NIOSH 6006, NIOSH 6009, NIOSH 6010, NIOSH 7300, NIOSH 7303, NIOSH 7600, NIOSH 7903, NIOSH 9100, NIOSH 9102, EPA IP-6A, EPA IP-6C, OSHA PV2120, OSHA 7, OSHA 42, OSHA 47, OSHA 48, OSHA 64, OSHA 69, OSHA 111, OSHA ID-140, OSHA ID-121, OSHA ID-125G, OSHA IS-215, OSHA 1001, OSHA 1002, OSHA 1003, OSHA 1004, OSHA 1005 and OSHA Chemical and Sampling Information for Silane. Volatile organic compounds on 3M Organic Vapor Monitors, Assay Technology Passive Monitors and SKC Passive Monitors. Formaldehyde and other aldehydes and ketones on Assay Technology Passive Monitor. Aldehydes and ketones by EPA TO-11A.

The TestAmerica Phoenix is also licensed through the State of Arizona (AZ0728) for EPA method TO-15.

TestAmerica Phoenix also holds NELAC accreditation through the State of Oregon (AZ100001) for the analytical techniques noted on the scope of accreditation and the State of New York (11898) for NIOSH 6009.

Samples were analyzed using methods outlined in references such as:

- OSHA - Occupational Safety and Health Administration, U. S. Department of Labor, OSHA Analytical Methods Manual.
- NIOSH - National Institute for Occupational Safety and Health, U. S. Department of Health and Human Services, NIOSH Manual of Analytical Methods, Fourth Edition, 1994, and Updates. NIOSH Method 7300 analyses are performed using a modified digestion procedure to eliminate the use of perchloric acid.
- EPA - U. S. Environmental Protection Agency, Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition, 1999.
- EPA - U. S. Environmental Protection Agency, Analytical Methods, Emission Measurement Center (EMC).

Analytical Comments:

Unless otherwise noted, all method blanks and laboratory control spikes met method and/or laboratory quality control objectives for the analyses included in this report.

Unless otherwise noted, sample results have been corrected for method blank values.

Client Project: 005086

Dear Mr. Todd Cruse:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 29-Jun-11 which were analyzed in accordance with the attached Chain of Custody record(s).

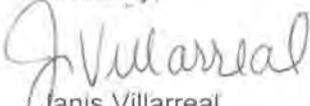

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody

Unless otherwise noted, all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

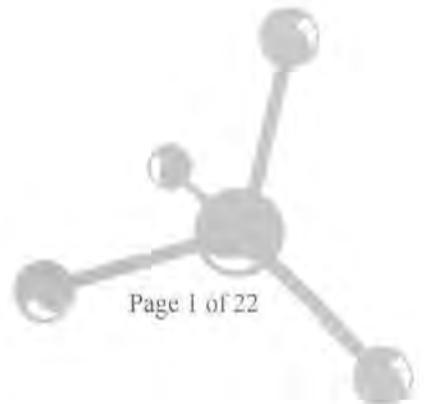

Sincerely,

  
Janis Villarreal  
Laboratory Director

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the Environmental Laboratory Accreditation Program (CA) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste for the following methods:

Certificate# 2741, 2743, 2579, 2754 & 2740 approved for EPA 8260 and LUFT GC/MS  
Certificate# 2742, 2745, & 2741 approved for LUFT  
Certificate# 2745 & 2742 approved for EPA 418.1

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the National Environmental Accreditation Conference Standards for the category Environmental Analysis Air and Emissions for the following analytes and methods:

1,2,4-Trichlorobenzene by EPA TO-15 & TO-14A  
Hexachlorobutadiene by EPA TO-15 & TO-14A  
1,2,4-Trimethylbenzene by EPA TO-14A  
1,2-Dichlorobenzene by EPA TO-15 & TO-14A  
1,3,5-Trimethylbenzene by EPA TO-14A  
1,4-Dichlorobenzene by EPA TO-15 & TO-14A  
Benzene by EPA TO-15 & TO-14A  
Chlorobenzene by EPA TO-15 & TO-14A  
Ethyl benzene by EPA TO-15 & TO-14A  
Styrene by EPA TO-15 & TO-14A  
Toluene by EPA TO-15 & TO-14A  
Total Xylenes by EPA TO-15 & TO-14A  
1,1,1-Trichloroethane by EPA TO-15 & TO-14A  
1,1,2,2-Tetrachloroethane by EPA TO-15 & TO-14A  
1,1,2-Trichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethene by EPA TO-15 & TO-14A  
1,2-Dichloroethane by EPA TO-15 & TO-14A  
1,2-Dichloropropane by EPA TO-15 & TO-14A  
Bromoform by EPA TO-15  
Bromomethane by EPA TO-15 & TO-14A  
Carbon tetrachloride by EPA TO-15 & TO-14A  
Chloroethane by EPA TO-15  
Chloroform by EPA TO-15 & TO-14A  
Chloromethane by EPA TO-15 & TO-14A  
cis-1,2-Dichloroethene by EPA TO-15  
cis-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Methylene chloride by EPA TO-15 & TO-14A  
Tetrachloroethane by EPA TO-15 & TO-14A  
trans-1,2-Dichloroethene by EPA TO-15  
trans-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Trichloroethene by EPA TO-15 & TO-14A  
Vinyl chloride by EPA TO-15 & TO-14A  
2-Butanone by EPA TO-15  
4-Methyl-2-Pentanone by EPA TO-15  
Hexane by EPA TO-15  
Methyl tert-butyl ether by EPA TO-15  
Vinyl acetate by EPA TO-15

H&P Project: CC072911-11  
Client Project: 005086

Dear Mr. Todd Cruse:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 29-Jul-11 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody

Unless otherwise noted, all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

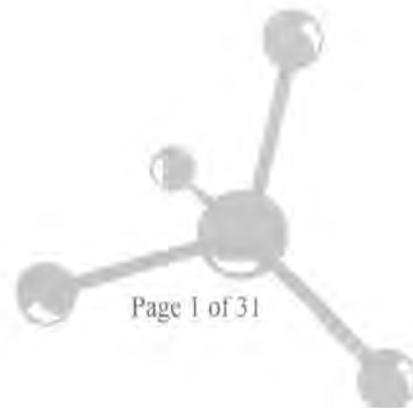

Sincerely,

  
Janis Villarreal  
Laboratory Director

### Notes and Definitions

- QL-1H The LCS and/or LCSD recoveries fell above the established control specifications for this analyte. Any result for this compound is qualified and should be considered biased high.
- E The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate (CLP E-flag).
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

## Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the Environmental Laboratory Accreditation Program (CA) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste for the following methods:

Certificate# 2741, 2743, 2579, 2754 & 2740 approved for EPA 8260 and LUFT GC/MS  
Certificate# 2742, 2745, & 2741 approved for LUFT  
Certificate# 2745 & 2742 approved for EPA 418.1

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the National Environmental Accreditation Conference Standards for the category Environmental Analysis Air and Emissions for the following analytes and methods:

1,2,4-Trichlorobenzene by EPA TO-15 & TO-14A  
Hexachlorobutadiene by EPA TO-15 & TO-14A  
1,2,4-Trimethylbenzene by EPA TO -14A  
1,2-Dichlorobenzene by EPA TO-15 & TO-14A  
1,3,5-Trimethylbenzene by EPA TO -14A  
1,4-Dichlorobenzene by EPA TO-15 & TO-14A  
Benzene by EPA TO-15 & TO-14A  
Chlorobenzene by EPA TO-15 & TO-14A  
Ethyl benzene by EPA TO-15 & TO-14A  
Styrene by EPA TO-15 & TO-14A  
Toluene by EPA TO-15 & TO-14A  
Total Xylenes by EPA TO-15 & TO-14A  
1,1,1-Trichloroethane by EPA TO-15 & TO-14A  
1,1,2,2-Tetrachloroethane by EPA TO-15 & TO-14A  
1,1,2-Trichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethene by EPA TO-15 & TO-14A  
1,2-Dichloroethane by EPA TO-15 & TO-14A  
1,2-Dichloropropane by EPA TO-15 & TO-14A  
Bromoform by EPA TO-15  
Bromomethane by EPA TO-15 & TO-14A  
Carbon tetrachloride by EPA TO-15 & TO-14A  
Chloroethane by EPA TO-15  
Chloroform by EPA TO-15 & TO-14A  
Chloromethane by EPA TO-15 & TO-14A  
cis-1,2-Dichloroethene by EPA TO-15  
cis-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Methylene chloride by EPA TO -15 & TO-14A  
Tetrachloroethane by EPA TO-15 & TO-14A  
trans-1,2-Dichloroethene by EPA TO-15  
trans-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Trichloroethene by EPA TO-15 & TO-14A  
Vinyl chloride by EPA TO -15 & TO-14A  
2-Butanone by EPA TO-15  
4-Methyl-2-Pentanone by EPA TO-15  
Hexane by EPA TO-15  
Methyl tert-butyl ether by EPA TO-15  
Vinyl acetate by EPA TO-15

This certification applies to samples analyzed in summa canisters.

H&P Project: CC080211-10  
Client Project: 005086

Dear Mr. Todd Cruse:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 02-Aug-11 which were analyzed in accordance with the attached Chain of Custody record(s).

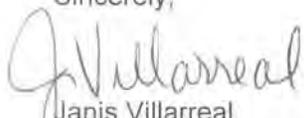

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody

Unless otherwise noted, all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

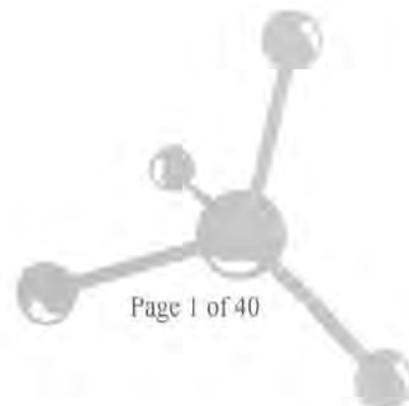

Sincerely,

  
Janis Villarreal  
Laboratory Director

### Notes and Definitions

- QL-1H The LCS and/or LCSD recoveries fell above the established control specifications for this analyte. Any result for this compound is qualified and should be considered biased high.
- C-06 The daily calibration for this compound was greater than the desired +/- % deviation; therefore, this concentration is an estimated value.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

## Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the Environmental Laboratory Accreditation Program (CA) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste for the following methods:

Certificate# 2741, 2743, 2579, 2754 & 2740 approved for EPA 8260 and LUFT GC/MS  
Certificate# 2742, 2745, & 2741 approved for LUFT  
Certificate# 2745 & 2742 approved for EPA 418.1

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the National Environmental Accreditation Conference Standards for the category Environmental Analysis Air and Emissions for the following analytes and methods:

1,2,4-Trichlorobenzene by EPA TO-15 & TO-14A  
Hexachlorobutadiene by EPA TO-15 & TO-14A  
1,2,4-Trimethylbenzene by EPA TO -14A  
1,2-Dichlorobenzene by EPA TO-15 & TO-14A  
1,3,5-Trimethylbenzene by EPA TO -14A  
1,4-Dichlorobenzene by EPA TO-15 & TO-14A  
Benzene by EPA TO-15 & TO-14A  
Chlorobenzene by EPA TO-15 & TO-14A  
Ethyl benzene by EPA TO-15 & TO-14A  
Styrene by EPA TO-15 & TO-14A  
Toluene by EPA TO-15 & TO-14A  
Total Xylenes by EPA TO-15 & TO-14A  
1,1,1-Trichloroethane by EPA TO-15 & TO-14A  
1,1,2,2-Tetrachloroethane by EPA TO-15 & TO-14A  
1,1,2-Trichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethane by EPA TO-15 & TO-14A  
1,1-Dichloroethene by EPA TO-15 & TO-14A  
1,2-Dichloroethane by EPA TO-15 & TO-14A  
1,2-Dichloropropane by EPA TO-15 & TO-14A  
Bromoform by EPA TO-15  
Bromomethane by EPA TO-15 & TO-14A  
Carbon tetrachloride by EPA TO-15 & TO-14A  
Chloroethane by EPA TO-15  
Chloroform by EPA TO-15 & TO-14A  
Chloromethane by EPA TO-15 & TO-14A  
cis-1,2-Dichloroethene by EPA TO-15  
cis-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Methylene chloride by EPA TO -15 & TO-14A  
Tetrachloroethane by EPA TO-15 & TO-14A  
trans-1,2-Dichloroethene by EPA TO-15  
trans-1,2-Dichloropropene by EPA TO-15 & TO-14A  
Trichloroethene by EPA TO-15 & TO-14A  
Vinyl chloride by EPA TO -15 & TO-14A  
2-Butanone by EPA TO-15  
4-Methyl-2-Pentanone by EPA TO-15  
Hexane by EPA TO-15  
Methyl tert-butyl ether by EPA TO-15  
Vinyl acetate by EPA TO-15

This certification applies to samples analyzed in summa canisters.

## LABORATORY REPORT

**Client:**

Clear Creek Associates (Phoenix)  
6155 E. Indian School Rd., Suite 200  
Scottsdale, AZ 85251  
Attn: Todd Cruse

Work Order: PUD1604  
Project Name: Motorola Air  
Project Number: Motorola 52  
Date Received: 04/27/11  
Final Report: 04/28/11 16:36

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica.*

*TestAmerica Laboratories, Inc., Phoenix Laboratory certifies that the analytical results contained herein apply only to the specific sample(s) analyzed.*

*The Chain of Custody, 1 page, is included and is an integral part of this report. This entire report was reviewed and approved for release.*

If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-(602)437-3340

Analyses included in this report were performed by the laboratory shown at the top of this report unless otherwise indicated.

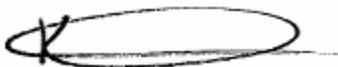

**CASE NARRATIVE:**

- SAMPLE RECEIPT:** Samples were received intact, at 20°C and with chain of custody documentation.
- HOLDING TIMES:** All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.
- PRESERVATION:** Samples requiring preservation were verified prior to sample analysis.
- QA/QC CRITERIA:** All analyses met method criteria, except as noted in the report with data qualifiers.

N1-Vinyl Acetate, Benzyl Chloride, 1,2,4-Trichlorobenzene and Hexachlorobutadiene exceeded the laboratory historical acceptance limits in the second source in the daily analytical run. The second source is not method required but AZ required.

- COMMENTS:** No significant observations were made.
- SUBCONTRACTED:** No samples were subcontracted to an outside laboratory for analysis.

## CERTIFICATION SUMMARY

Analyses included in this report were performed by TestAmerica Phoenix, 4625 E. Cotton Center Boulevard, Building 3, Suite 189, Phoenix, AZ 85040.

TestAmerica Phoenix (Lab ID 154268) is accredited by the American Industrial Hygiene Association (AIHA) in the industrial hygiene program for the analytical techniques noted on the scope of accreditation for the following methods: NIOSH 0500, NIOSH 0600, NIOSH 1003, NIOSH 1005, NIOSH 1007, NIOSH 1010, NIOSH 1015, NIOSH 1022, NIOSH 1300, NIOSH 1400, NIOSH 1401, NIOSH 1403, NIOSH 1405, NIOSH 1450, NIOSH 1457, NIOSH 1500, NIOSH 1501, NIOSH 1550, NIOSH 1602, NIOSH 1604, NIOSH 1606, NIOSH 1609, NIOSH 1610, NIOSH 1611, NIOSH, 1613, NIOSH 1615, NIOSH 2000, NIOSH 2016, NIOSH 2532, NIOSH 2546, NIOSH 2551, NIOSH 5000, NIOSH 5503, NIOSH 5506, NIOSH 5600, NIOSH 6006, NIOSH 6009, NIOSH 6010, NIOSH 7300, NIOSH 7303, NIOSH 7600, NIOSH 7903, NIOSH 9100, NIOSH 9102, EPA IP-6A, EPA IP-6C, OSHA PV2120, OSHA 7, OSHA 42, OSHA 47, OSHA 48, OSHA 64, OSHA 69, OSHA 111, OSHA ID-140, OSHA ID-121, OSHA ID-125G, OSHA IS-215, OSHA 1001, OSHA 1002, OSHA 1003, OSHA 1004, OSHA 1005 and OSHA Chemical and Sampling Information for Silane. Volatile organic compounds on 3M Organic Vapor Monitors, Assay Technology Passive Monitors and SKC Passive Monitors. Formaldehyde and other aldehydes and ketones on Assay Technology Passive Monitor. Aldehydes and ketones by EPA TO-11A.

The TestAmerica Phoenix is also licensed through the State of Arizona (AZ0728) for EPA method TO-15.

TestAmerica Phoenix also holds NELAC accreditation through the State of Oregon (AZ100001) for the analytical techniques noted on the scope of accreditation and the State of New York (11898) for NIOSH 6009.

Samples were analyzed using methods outlined in references such as:

- OSHA - Occupational Safety and Health Administration, U. S. Department of Labor, OSHA Analytical Methods Manual.
- NIOSH - National Institute for Occupational Safety and Health, U. S. Department of Health and Human Services, NIOSH Manual of Analytical Methods, Fourth Edition, 1994, and Updates. NIOSH Method 7300 analyses are performed using a modified digestion procedure to eliminate the use of perchloric acid.
- EPA - U. S. Environmental Protection Agency, Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition, 1999.
- EPA - U. S. Environmental Protection Agency, Analytical Methods, Emission Measurement Center (EMC).

Analytical Comments:

Unless otherwise noted, all method blanks and laboratory control spikes met method and/or laboratory quality control objectives for the analyses included in this report.

Unless otherwise noted, sample results have been corrected for method blank values.

*For information concerning certifications of this facility or another TestAmerica facility, please visit our website at [www.TestAmericaInc.com](http://www.TestAmericaInc.com)*

### DATA QUALIFIERS AND DEFINITIONS

- L3** Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
- N1** See case narrative.
- V1** Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.

## LABORATORY REPORT

**Client:**

Clear Creek Associates (Phoenix)  
6155 E. Indian School Rd., Suite 200  
Scottsdale, AZ 85251  
Attn: Todd Cruse

Work Order: PUE0055  
Project Name: Motorola Air  
Project Number: Motorola 52  
Date Received: 05/02/11  
Final Report: 05/05/11 08:33

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica.*

*TestAmerica Laboratories, Inc., Phoenix Laboratory certifies that the analytical results contained herein apply only to the specific sample(s) analyzed.*

*The Chain of Custody, 1 page, is included and is an integral part of this report. This entire report was reviewed and approved for release.*

If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-(602)437-3340

Analyses included in this report were performed by the laboratory shown at the top of this report unless otherwise indicated.

**CASE NARRATIVE:**

- SAMPLE RECEIPT:** Samples were received intact, at 20°C and with chain of custody documentation.
- HOLDING TIMES:** All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.
- PRESERVATION:** Samples requiring preservation were verified prior to sample analysis.
- QA/QC CRITERIA:** All analyses met method criteria, except as noted in the report with data qualifiers.

N1-The daily second source calibration verification recovered high and outside of acceptance limits for Vinyl Acetate and Benzyl Chloride. All associated samples are non-detect for this compound and therefore should not be impacted.

**COMMENTS:** No significant observations were made.

**SUBCONTRACTED:** Refer to the last page for specific subcontract laboratory information included in this report.

## CERTIFICATION SUMMARY

Analyses included in this report were performed by TestAmerica Phoenix, 4625 E. Cotton Center Boulevard, Building 3, Suite 189, Phoenix, AZ 85040.

TestAmerica Phoenix (Lab ID 154268) is accredited by the American Industrial Hygiene Association (AIHA) in the industrial hygiene program for the analytical techniques noted on the scope of accreditation for the following methods: NIOSH 0500, NIOSH 0600, NIOSH 1003, NIOSH 1005, NIOSH 1007, NIOSH 1010, NIOSH 1015, NIOSH 1022, NIOSH 1300, NIOSH 1400, NIOSH 1401, NIOSH 1403, NIOSH 1405, NIOSH 1450, NIOSH 1457, NIOSH 1500, NIOSH 1501, NIOSH 1550, NIOSH 1602, NIOSH 1604, NIOSH 1606, NIOSH 1609, NIOSH 1610, NIOSH 1611, NIOSH, 1613, NIOSH 1615, NIOSH 2000, NIOSH 2016, NIOSH 2532, NIOSH 2546, NIOSH 2551, NIOSH 5000, NIOSH 5503, NIOSH 5506, NIOSH 5600, NIOSH 6006, NIOSH 6009, NIOSH 6010, NIOSH 7300, NIOSH 7303, NIOSH 7600, NIOSH 7903, NIOSH 9100, NIOSH 9102, EPA IP-6A, EPA IP-6C, OSHA PV2120, OSHA 7, OSHA 42, OSHA 47, OSHA 48, OSHA 64, OSHA 69, OSHA 111, OSHA ID-140, OSHA ID-121, OSHA ID-125G, OSHA IS-215, OSHA 1001, OSHA 1002, OSHA 1003, OSHA 1004, OSHA 1005 and OSHA Chemical and Sampling Information for Silane. Volatile organic compounds on 3M Organic Vapor Monitors, Assay Technology Passive Monitors and SKC Passive Monitors. Formaldehyde and other aldehydes and ketones on Assay Technology Passive Monitor. Aldehydes and ketones by EPA TO-11A.

The TestAmerica Phoenix is also licensed through the State of Arizona (AZ0728) for EPA method TO-15.

TestAmerica Phoenix also holds NELAC accreditation through the State of Oregon (AZ100001) for the analytical techniques noted on the scope of accreditation and the State of New York (11898) for NIOSH 6009.

Samples were analyzed using methods outlined in references such as:

- OSHA - Occupational Safety and Health Administration, U. S. Department of Labor, OSHA Analytical Methods Manual.
- NIOSH - National Institute for Occupational Safety and Health, U. S. Department of Health and Human Services, NIOSH Manual of Analytical Methods, Fourth Edition, 1994, and Updates. NIOSH Method 7300 analyses are performed using a modified digestion procedure to eliminate the use of perchloric acid.
- EPA - U. S. Environmental Protection Agency, Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition, 1999.
- EPA - U. S. Environmental Protection Agency, Analytical Methods, Emission Measurement Center (EMC).

Analytical Comments:

Unless otherwise noted, all method blanks and laboratory control spikes met method and/or laboratory quality control objectives for the analyses included in this report.

Unless otherwise noted, sample results have been corrected for method blank values.

*For information concerning certifications of this facility or another TestAmerica facility, please visit our website at [www.TestAmericaInc.com](http://www.TestAmericaInc.com)*

### DATA QUALIFIERS AND DEFINITIONS

- L3** Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
- N1** See case narrative.
- V1** Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.

## LABORATORY REPORT

**Client:**

Clear Creek Associates (Phoenix)  
6155 E. Indian School Rd., Suite 200  
Scottsdale, AZ 85251  
Attn: Todd Cruse

Work Order: PUE0140  
Project Name: Motorola Air  
Project Number: Motorola 52  
Date Received: 05/03/11  
Final Report: 05/05/11 16:29

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica.*

*TestAmerica Laboratories, Inc., Phoenix Laboratory certifies that the analytical results contained herein apply only to the specific sample(s) analyzed.*

*The Chain of Custody, 1 page, is included and is an integral part of this report. This entire report was reviewed and approved for release.*

If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-(602)437-3340

Analyses included in this report were performed by the laboratory shown at the top of this report unless otherwise indicated.

**CASE NARRATIVE:**

**SAMPLE RECEIPT:** Samples were received intact, at 20°C and with chain of custody documentation.

**HOLDING TIMES:** All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.

**PRESERVATION:** Samples requiring preservation were verified prior to sample analysis.

**QA/QC CRITERIA:** All analyses met method criteria, except as noted in the report with data qualifiers.

N1-The daily second source calibration verification standard recovered high and outside of acceptance limits for Vinyl Acetate and Benzyl Chloride. All associated samples are non-detect for these compounds and therefore should not be impacted.

**COMMENTS:** No significant observations were made.

**SUBCONTRACTED:** Refer to the last page for specific subcontract laboratory information included in this report.

## CERTIFICATION SUMMARY

Analyses included in this report were performed by TestAmerica Phoenix, 4625 E. Cotton Center Boulevard, Building 3, Suite 189, Phoenix, AZ 85040.

TestAmerica Phoenix (Lab ID 154268) is accredited by the American Industrial Hygiene Association (AIHA) in the industrial hygiene program for the analytical techniques noted on the scope of accreditation for the following methods: NIOSH 0500, NIOSH 0600, NIOSH 1003, NIOSH 1005, NIOSH 1007, NIOSH 1010, NIOSH 1015, NIOSH 1022, NIOSH 1300, NIOSH 1400, NIOSH 1401, NIOSH 1403, NIOSH 1405, NIOSH 1450, NIOSH 1457, NIOSH 1500, NIOSH 1501, NIOSH 1550, NIOSH 1602, NIOSH 1604, NIOSH 1606, NIOSH 1609, NIOSH 1610, NIOSH 1611, NIOSH, 1613, NIOSH 1615, NIOSH 2000, NIOSH 2016, NIOSH 2532, NIOSH 2546, NIOSH 2551, NIOSH 5000, NIOSH 5503, NIOSH 5506, NIOSH 5600, NIOSH 6006, NIOSH 6009, NIOSH 6010, NIOSH 7300, NIOSH 7303, NIOSH 7600, NIOSH 7903, NIOSH 9100, NIOSH 9102, EPA IP-6A, EPA IP-6C, OSHA PV2120, OSHA 7, OSHA 42, OSHA 47, OSHA 48, OSHA 64, OSHA 69, OSHA 111, OSHA ID-140, OSHA ID-121, OSHA ID-125G, OSHA IS-215, OSHA 1001, OSHA 1002, OSHA 1003, OSHA 1004, OSHA 1005 and OSHA Chemical and Sampling Information for Silane. Volatile organic compounds on 3M Organic Vapor Monitors, Assay Technology Passive Monitors and SKC Passive Monitors. Formaldehyde and other aldehydes and ketones on Assay Technology Passive Monitor. Aldehydes and ketones by EPA TO-11A.

The TestAmerica Phoenix is also licensed through the State of Arizona (AZ0728) for EPA method TO-15.

TestAmerica Phoenix also holds NELAC accreditation through the State of Oregon (AZ100001) for the analytical techniques noted on the scope of accreditation and the State of New York (11898) for NIOSH 6009.

Samples were analyzed using methods outlined in references such as:

- OSHA - Occupational Safety and Health Administration, U. S. Department of Labor, OSHA Analytical Methods Manual.
- NIOSH - National Institute for Occupational Safety and Health, U. S. Department of Health and Human Services, NIOSH Manual of Analytical Methods, Fourth Edition, 1994, and Updates. NIOSH Method 7300 analyses are performed using a modified digestion procedure to eliminate the use of perchloric acid.
- EPA - U. S. Environmental Protection Agency, Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition, 1999.
- EPA - U. S. Environmental Protection Agency, Analytical Methods, Emission Measurement Center (EMC).

Analytical Comments:

Unless otherwise noted, all method blanks and laboratory control spikes met method and/or laboratory quality control objectives for the analyses included in this report.

Unless otherwise noted, sample results have been corrected for method blank values.

*For information concerning certifications of this facility or another TestAmerica facility, please visit our website at [www.TestAmericaInc.com](http://www.TestAmericaInc.com)*

### DATA QUALIFIERS AND DEFINITIONS

- L3** Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
- N1** See case narrative.
- V1** Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.

## LABORATORY REPORT

**Client:**

Clear Creek Associates (Phoenix)  
6155 E. Indian School Rd., Suite 200  
Scottsdale, AZ 85251  
Attn: Todd Cruse

Work Order: PUE0245  
Project Name: Motorola Air  
Project Number: [none]  
Date Received: 05/04/11  
Final Report: 05/06/11 13:19

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica.*

*TestAmerica Laboratories, Inc., Phoenix Laboratory certifies that the analytical results contained herein apply only to the specific sample(s) analyzed.*

*The Chain of Custody, 1 page, is included and is an integral part of this report. This entire report was reviewed and approved for release.*

If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-(602)437-3340

Analyses included in this report were performed by the laboratory shown at the top of this report unless otherwise indicated.

**CASE NARRATIVE:**

- SAMPLE RECEIPT:** Samples were received intact, at 20°C and with chain of custody documentation.
- HOLDING TIMES:** All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.
- PRESERVATION:** Samples requiring preservation were verified prior to sample analysis.
- QA/QC CRITERIA:** All analyses met method criteria, except as noted in the report with data qualifiers.

The daily second source calibration verification standard recovered high and outside of acceptance limits for Vinyl Acetate and Benzyl Chloride. All associated samples are non-detect for this compound and therefore should not be impacted.

- COMMENTS:** No significant observations were made.
- SUBCONTRACTED:** Refer to the last page for specific subcontract laboratory information included in this report.

## CERTIFICATION SUMMARY

Analyses included in this report were performed by TestAmerica Phoenix, 4625 E. Cotton Center Boulevard, Building 3, Suite 189, Phoenix, AZ 85040.

TestAmerica Phoenix (Lab ID 154268) is accredited by the American Industrial Hygiene Association (AIHA) in the industrial hygiene program for the analytical techniques noted on the scope of accreditation for the following methods: NIOSH 0500, NIOSH 0600, NIOSH 1003, NIOSH 1005, NIOSH 1007, NIOSH 1010, NIOSH 1015, NIOSH 1022, NIOSH 1300, NIOSH 1400, NIOSH 1401, NIOSH 1403, NIOSH 1405, NIOSH 1450, NIOSH 1457, NIOSH 1500, NIOSH 1501, NIOSH 1550, NIOSH 1602, NIOSH 1604, NIOSH 1606, NIOSH 1609, NIOSH 1610, NIOSH 1611, NIOSH, 1613, NIOSH 1615, NIOSH 2000, NIOSH 2016, NIOSH 2532, NIOSH 2546, NIOSH 2551, NIOSH 5000, NIOSH 5503, NIOSH 5506, NIOSH 5600, NIOSH 6006, NIOSH 6009, NIOSH 6010, NIOSH 7300, NIOSH 7303, NIOSH 7600, NIOSH 7903, NIOSH 9100, NIOSH 9102, EPA IP-6A, EPA IP-6C, OSHA PV2120, OSHA 7, OSHA 42, OSHA 47, OSHA 48, OSHA 64, OSHA 69, OSHA 111, OSHA ID-140, OSHA ID-121, OSHA ID-125G, OSHA IS-215, OSHA 1001, OSHA 1002, OSHA 1003, OSHA 1004, OSHA 1005 and OSHA Chemical and Sampling Information for Silane. Volatile organic compounds on 3M Organic Vapor Monitors, Assay Technology Passive Monitors and SKC Passive Monitors. Formaldehyde and other aldehydes and ketones on Assay Technology Passive Monitor. Aldehydes and ketones by EPA TO-11A.

The TestAmerica Phoenix is also licensed through the State of Arizona (AZ0728) for EPA method TO-15.

TestAmerica Phoenix also holds NELAC accreditation through the State of Oregon (AZ100001) for the analytical techniques noted on the scope of accreditation and the State of New York (11898) for NIOSH 6009.

Samples were analyzed using methods outlined in references such as:

- OSHA - Occupational Safety and Health Administration, U. S. Department of Labor, OSHA Analytical Methods Manual.
- NIOSH - National Institute for Occupational Safety and Health, U. S. Department of Health and Human Services, NIOSH Manual of Analytical Methods, Fourth Edition, 1994, and Updates. NIOSH Method 7300 analyses are performed using a modified digestion procedure to eliminate the use of perchloric acid.
- EPA - U. S. Environmental Protection Agency, Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition, 1999.
- EPA - U. S. Environmental Protection Agency, Analytical Methods, Emission Measurement Center (EMC).

Analytical Comments:

Unless otherwise noted, all method blanks and laboratory control spikes met method and/or laboratory quality control objectives for the analyses included in this report.

Unless otherwise noted, sample results have been corrected for method blank values.

### DATA QUALIFIERS AND DEFINITIONS

- L3** Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
- N1** See case narrative.
- V1** Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.

## LABORATORY REPORT

**Client:**

Clear Creek Associates (Phoenix)  
6155 E. Indian School Rd., Suite 200  
Scottsdale, AZ 85251  
Attn: Todd Cruse

Work Order: PUE0339  
Project Name: Motorola Air  
Project Number: Motorola 52  
Date Received: 05/05/11  
Final Report: 05/09/11 14:34

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica.*

*TestAmerica Laboratories, Inc., Phoenix Laboratory certifies that the analytical results contained herein apply only to the specific sample(s) analyzed.*

*The Chain of Custody, 1 page, is included and is an integral part of this report. This entire report was reviewed and approved for release.*

If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-(602)437-3340

Analyses included in this report were performed by the laboratory shown at the top of this report unless otherwise indicated.

**CASE NARRATIVE:**

- SAMPLE RECEIPT:** Samples were received intact, at 20°C and with chain of custody documentation.
- HOLDING TIMES:** All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.
- PRESERVATION:** Samples requiring preservation were verified prior to sample analysis.
- QA/QC CRITERIA:** All analyses met method criteria, except as noted in the report with data qualifiers.

N1-1,2,4-Trichlorobenzene and Hexachlorobutadiene recovered above laboratory acceptance limits in the second source calibration standard analyzed after the initial calibration. Heptane, 1,2,4-Trichlorobenzene and Hexachlorobutadiene and Benzyl Chloride exceeded laboratory historical acceptance limits in the daily calibration verification standard. All associated samples are non-detect for these compounds and therefore should not be impacted.

- COMMENTS:** No significant observations were made.
- SUBCONTRACTED:** No samples were subcontracted to an outside laboratory for analysis.

## CERTIFICATION SUMMARY

Analyses included in this report were performed by TestAmerica Phoenix, 4625 E. Cotton Center Boulevard, Building 3, Suite 189, Phoenix, AZ 85040.

TestAmerica Phoenix (Lab ID 154268) is accredited by the American Industrial Hygiene Association (AIHA) in the industrial hygiene program for the analytical techniques noted on the scope of accreditation for the following methods: NIOSH 0500, NIOSH 0600, NIOSH 1003, NIOSH 1005, NIOSH 1007, NIOSH 1010, NIOSH 1015, NIOSH 1022, NIOSH 1300, NIOSH 1400, NIOSH 1401, NIOSH 1403, NIOSH 1405, NIOSH 1450, NIOSH 1457, NIOSH 1500, NIOSH 1501, NIOSH 1550, NIOSH 1602, NIOSH 1604, NIOSH 1606, NIOSH 1609, NIOSH 1610, NIOSH 1611, NIOSH, 1613, NIOSH 1615, NIOSH 2000, NIOSH 2016, NIOSH 2532, NIOSH 2546, NIOSH 2551, NIOSH 5000, NIOSH 5503, NIOSH 5506, NIOSH 5600, NIOSH 6006, NIOSH 6009, NIOSH 6010, NIOSH 7300, NIOSH 7303, NIOSH 7600, NIOSH 7903, NIOSH 9100, NIOSH 9102, EPA IP-6A, EPA IP-6C, OSHA PV2120, OSHA 7, OSHA 42, OSHA 47, OSHA 48, OSHA 64, OSHA 69, OSHA 111, OSHA ID-140, OSHA ID-121, OSHA ID-125G, OSHA IS-215, OSHA 1001, OSHA 1002, OSHA 1003, OSHA 1004, OSHA 1005 and OSHA Chemical and Sampling Information for Silane. Volatile organic compounds on 3M Organic Vapor Monitors, Assay Technology Passive Monitors and SKC Passive Monitors. Formaldehyde and other aldehydes and ketones on Assay Technology Passive Monitor. Aldehydes and ketones by EPA TO-11A.

The TestAmerica Phoenix is also licensed through the State of Arizona (AZ0728) for EPA method TO-15.

TestAmerica Phoenix also holds NELAC accreditation through the State of Oregon (AZ100001) for the analytical techniques noted on the scope of accreditation and the State of New York (11898) for NIOSH 6009.

Samples were analyzed using methods outlined in references such as:

- OSHA - Occupational Safety and Health Administration, U. S. Department of Labor, OSHA Analytical Methods Manual.
- NIOSH - National Institute for Occupational Safety and Health, U. S. Department of Health and Human Services, NIOSH Manual of Analytical Methods, Fourth Edition, 1994, and Updates. NIOSH Method 7300 analyses are performed using a modified digestion procedure to eliminate the use of perchloric acid.
- EPA - U. S. Environmental Protection Agency, Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition, 1999.
- EPA - U. S. Environmental Protection Agency, Analytical Methods, Emission Measurement Center (EMC).

Analytical Comments:

Unless otherwise noted, all method blanks and laboratory control spikes met method and/or laboratory quality control objectives for the analyses included in this report.

Unless otherwise noted, sample results have been corrected for method blank values.

## LABORATORY REPORT

**Client:**

Clear Creek Associates (Phoenix)  
6155 E. Indian School Rd., Suite 200  
Scottsdale, AZ 85251  
Attn: Todd Cruse

Work Order: PUE0422  
Project Name: Motorola Air  
Project Number: Motorola 52  
Date Received: 05/06/11  
Final Report: 05/10/11 09:50

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica.*

*TestAmerica Laboratories, Inc., Phoenix Laboratory certifies that the analytical results contained herein apply only to the specific sample(s) analyzed.*

*The Chain of Custody, 1 page, is included and is an integral part of this report. This entire report was reviewed and approved for release.*

If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-(602)437-3340

Analyses included in this report were performed by the laboratory shown at the top of this report unless otherwise indicated.

**CASE NARRATIVE:**

- SAMPLE RECEIPT:** Samples were received intact, at 20°C and with chain of custody documentation.
- HOLDING TIMES:** All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.
- PRESERVATION:** Samples requiring preservation were verified prior to sample analysis.
- QA/QC CRITERIA:** All analyses met method criteria, except as noted in the report with data qualifiers.

N1 - 1,2,4-Trichlorobenzene and Hexachlorobutadiene recovered above laboratory acceptance limits in the second source calibration standard analyzed after the initial calibration.

1,2,4-Trichlorobenzene, Hexachlorobutadiene, Vinyl Acetate and Benzyl Chloride exceeded laboratory historical acceptance limits in the daily calibration verification standard. All associated samples are non-detect for these compounds and therefore should not be impacted.

**COMMENTS:** No significant observations were made.

**SUBCONTRACTED:** No samples were subcontracted to an outside laboratory for analysis.

## CERTIFICATION SUMMARY

Analyses included in this report were performed by TestAmerica Phoenix, 4625 E. Cotton Center Boulevard, Building 3, Suite 189, Phoenix, AZ 85040.

TestAmerica Phoenix (Lab ID 154268) is accredited by the American Industrial Hygiene Association (AIHA) in the industrial hygiene program for the analytical techniques noted on the scope of accreditation for the following methods: NIOSH 0500, NIOSH 0600, NIOSH 1003, NIOSH 1005, NIOSH 1007, NIOSH 1010, NIOSH 1015, NIOSH 1022, NIOSH 1300, NIOSH 1400, NIOSH 1401, NIOSH 1403, NIOSH 1405, NIOSH 1450, NIOSH 1457, NIOSH 1500, NIOSH 1501, NIOSH 1550, NIOSH 1602, NIOSH 1604, NIOSH 1606, NIOSH 1609, NIOSH 1610, NIOSH 1611, NIOSH, 1613, NIOSH 1615, NIOSH 2000, NIOSH 2016, NIOSH 2532, NIOSH 2546, NIOSH 2551, NIOSH 5000, NIOSH 5503, NIOSH 5506, NIOSH 5600, NIOSH 6006, NIOSH 6009, NIOSH 6010, NIOSH 7300, NIOSH 7303, NIOSH 7600, NIOSH 7903, NIOSH 9100, NIOSH 9102, EPA IP-6A, EPA IP-6C, OSHA PV2120, OSHA 7, OSHA 42, OSHA 47, OSHA 48, OSHA 64, OSHA 69, OSHA 111, OSHA ID-140, OSHA ID-121, OSHA ID-125G, OSHA IS-215, OSHA 1001, OSHA 1002, OSHA 1003, OSHA 1004, OSHA 1005 and OSHA Chemical and Sampling Information for Silane. Volatile organic compounds on 3M Organic Vapor Monitors, Assay Technology Passive Monitors and SKC Passive Monitors. Formaldehyde and other aldehydes and ketones on Assay Technology Passive Monitor. Aldehydes and ketones by EPA TO-11A.

The TestAmerica Phoenix is also licensed through the State of Arizona (AZ0728) for EPA method TO-15.

TestAmerica Phoenix also holds NELAC accreditation through the State of Oregon (AZ100001) for the analytical techniques noted on the scope of accreditation and the State of New York (11898) for NIOSH 6009.

Samples were analyzed using methods outlined in references such as:

- OSHA - Occupational Safety and Health Administration, U. S. Department of Labor, OSHA Analytical Methods Manual.
- NIOSH - National Institute for Occupational Safety and Health, U. S. Department of Health and Human Services, NIOSH Manual of Analytical Methods, Fourth Edition, 1994, and Updates. NIOSH Method 7300 analyses are performed using a modified digestion procedure to eliminate the use of perchloric acid.
- EPA - U. S. Environmental Protection Agency, Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition, 1999.
- EPA - U. S. Environmental Protection Agency, Analytical Methods, Emission Measurement Center (EMC).

Analytical Comments:

Unless otherwise noted, all method blanks and laboratory control spikes met method and/or laboratory quality control objectives for the analyses included in this report.

Unless otherwise noted, sample results have been corrected for method blank values.

## LABORATORY REPORT

**Client:**

Clear Creek Associates (Phoenix)  
6155 E. Indian School Rd., Suite 200  
Scottsdale, AZ 85251  
Attn: Todd Cruse

Work Order: PUE0477  
Project Name: Motorola Air  
Project Number: Motorola 52  
Date Received: 05/09/11  
Final Report: 05/12/11 15:46

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica.*

*TestAmerica Laboratories, Inc., Phoenix Laboratory certifies that the analytical results contained herein apply only to the specific sample(s) analyzed.*

*The Chain of Custody, 1 page, is included and is an integral part of this report. This entire report was reviewed and approved for release.*

If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-(602)437-3340

Analyses included in this report were performed by the laboratory shown at the top of this report unless otherwise indicated.

**CASE NARRATIVE:**

**SAMPLE RECEIPT:** Samples were received intact, at 20°C and with chain of custody documentation.

**HOLDING TIMES:** All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.

**PRESERVATION:** Samples requiring preservation were verified prior to sample analysis.

**QA/QC CRITERIA:** All analyses met method criteria, except as noted in the report with data qualifiers.

N1 - 1,2,4-Trichlorobenzene and Hexachlorobutadiene recovered above laboratory acceptance limits in the second source calibration standard analyzed after the initial calibration.

1,2,4-Trichlorobenzene and Hexachlorobutadiene exceeded laboratory historical acceptance limits in the daily calibration verification standard. All associated samples are non-detect for these compounds and therefore should not be impacted.

**COMMENTS:** No significant observations were made.

**SUBCONTRACTED:** No samples were subcontracted to an outside laboratory for analysis.

## CERTIFICATION SUMMARY

Analyses included in this report were performed by TestAmerica Phoenix, 4625 E. Cotton Center Boulevard, Building 3, Suite 189, Phoenix, AZ 85040.

TestAmerica Phoenix (Lab ID 154268) is accredited by the American Industrial Hygiene Association (AIHA) in the industrial hygiene program for the analytical techniques noted on the scope of accreditation for the following methods: NIOSH 0500, NIOSH 0600, NIOSH 1003, NIOSH 1005, NIOSH 1007, NIOSH 1010, NIOSH 1015, NIOSH 1022, NIOSH 1300, NIOSH 1400, NIOSH 1401, NIOSH 1403, NIOSH 1405, NIOSH 1450, NIOSH 1457, NIOSH 1500, NIOSH 1501, NIOSH 1550, NIOSH 1602, NIOSH 1604, NIOSH 1606, NIOSH 1609, NIOSH 1610, NIOSH 1611, NIOSH, 1613, NIOSH 1615, NIOSH 2000, NIOSH 2016, NIOSH 2532, NIOSH 2546, NIOSH 2551, NIOSH 5000, NIOSH 5503, NIOSH 5506, NIOSH 5600, NIOSH 6006, NIOSH 6009, NIOSH 6010, NIOSH 7300, NIOSH 7303, NIOSH 7600, NIOSH 7903, NIOSH 9100, NIOSH 9102, EPA IP-6A, EPA IP-6C, OSHA PV2120, OSHA 7, OSHA 42, OSHA 47, OSHA 48, OSHA 64, OSHA 69, OSHA 111, OSHA ID-140, OSHA ID-121, OSHA ID-125G, OSHA IS-215, OSHA 1001, OSHA 1002, OSHA 1003, OSHA 1004, OSHA 1005 and OSHA Chemical and Sampling Information for Silane. Volatile organic compounds on 3M Organic Vapor Monitors, Assay Technology Passive Monitors and SKC Passive Monitors. Formaldehyde and other aldehydes and ketones on Assay Technology Passive Monitor. Aldehydes and ketones by EPA TO-11A.

The TestAmerica Phoenix is also licensed through the State of Arizona (AZ0728) for EPA method TO-15.

TestAmerica Phoenix also holds NELAC accreditation through the State of Oregon (AZ100001) for the analytical techniques noted on the scope of accreditation and the State of New York (11898) for NIOSH 6009.

Samples were analyzed using methods outlined in references such as:

- OSHA - Occupational Safety and Health Administration, U. S. Department of Labor, OSHA Analytical Methods Manual.
- NIOSH - National Institute for Occupational Safety and Health, U. S. Department of Health and Human Services, NIOSH Manual of Analytical Methods, Fourth Edition, 1994, and Updates. NIOSH Method 7300 analyses are performed using a modified digestion procedure to eliminate the use of perchloric acid.
- EPA - U. S. Environmental Protection Agency, Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition, 1999.
- EPA - U. S. Environmental Protection Agency, Analytical Methods, Emission Measurement Center (EMC).

Analytical Comments:

Unless otherwise noted, all method blanks and laboratory control spikes met method and/or laboratory quality control objectives for the analyses included in this report.

Unless otherwise noted, sample results have been corrected for method blank values.

## LABORATORY REPORT

**Client:**

Clear Creek Associates (Phoenix)  
6155 E. Indian School Rd., Suite 200  
Scottsdale, AZ 85251  
Attn: Todd Cruse

Work Order: PUE0950  
Project Name: Motorola Air  
Project Number: Motorola 52  
Date Received: 05/16/11  
Final Report: 05/18/11 12:36

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica.*

*TestAmerica Laboratories, Inc., Phoenix Laboratory certifies that the analytical results contained herein apply only to the specific sample(s) analyzed.*

*The Chain of Custody, 1 page, is included and is an integral part of this report. This entire report was reviewed and approved for release.*

If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-(602)437-3340

Analyses included in this report were performed by the laboratory shown at the top of this report unless otherwise indicated.

**CASE NARRATIVE:**

**SAMPLE RECEIPT:** Samples were received intact, at 20°C and with chain of custody documentation.

**HOLDING TIMES:** All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.

**PRESERVATION:** Samples requiring preservation were verified prior to sample analysis.

**QA/QC CRITERIA:** All analyses met method criteria, except as noted in the report with data qualifiers.

N1 - 1,2,4-Trichlorobenzene and Hexachlorobutadiene recovered above laboratory acceptance limits in the second source calibration standard analyzed after the initial calibration.

1,2,4-Trichlorobenzene, Benzyl Chloride and Hexachlorobutadiene exceeded laboratory historical acceptance limits in the daily calibration verification standard. All associated samples are non-detect for these compounds and therefore should not be impacted.

**COMMENTS:** No significant observations were made.

**SUBCONTRACTED:** No samples were subcontracted to an outside laboratory for analysis.

Approved By:

## CERTIFICATION SUMMARY

Analyses included in this report were performed by TestAmerica Phoenix, 4625 E. Cotton Center Boulevard, Building 3, Suite 189, Phoenix, AZ 85040.

TestAmerica Phoenix (Lab ID 154268) is accredited by the American Industrial Hygiene Association (AIHA) in the industrial hygiene program for the analytical techniques noted on the scope of accreditation for the following methods: NIOSH 0500, NIOSH 0600, NIOSH 1003, NIOSH 1005, NIOSH 1007, NIOSH 1010, NIOSH 1015, NIOSH 1022, NIOSH 1300, NIOSH 1400, NIOSH 1401, NIOSH 1403, NIOSH 1405, NIOSH 1450, NIOSH 1457, NIOSH 1500, NIOSH 1501, NIOSH 1550, NIOSH 1602, NIOSH 1604, NIOSH 1606, NIOSH 1609, NIOSH 1610, NIOSH 1611, NIOSH, 1613, NIOSH 1615, NIOSH 2000, NIOSH 2016, NIOSH 2532, NIOSH 2546, NIOSH 2551, NIOSH 5000, NIOSH 5503, NIOSH 5506, NIOSH 5600, NIOSH 6006, NIOSH 6009, NIOSH 6010, NIOSH 7300, NIOSH 7303, NIOSH 7600, NIOSH 7903, NIOSH 9100, NIOSH 9102, EPA IP-6A, EPA IP-6C, OSHA PV2120, OSHA 7, OSHA 42, OSHA 47, OSHA 48, OSHA 64, OSHA 69, OSHA 111, OSHA ID-140, OSHA ID-121, OSHA ID-125G, OSHA IS-215, OSHA 1001, OSHA 1002, OSHA 1003, OSHA 1004, OSHA 1005 and OSHA Chemical and Sampling Information for Silane. Volatile organic compounds on 3M Organic Vapor Monitors, Assay Technology Passive Monitors and SKC Passive Monitors. Formaldehyde and other aldehydes and ketones on Assay Technology Passive Monitor. Aldehydes and ketones by EPA TO-11A.

The TestAmerica Phoenix is also licensed through the State of Arizona (AZ0728) for EPA method TO-15.

TestAmerica Phoenix also holds NELAC accreditation through the State of Oregon (AZ100001) for the analytical techniques noted on the scope of accreditation and the State of New York (11898) for NIOSH 6009.

Samples were analyzed using methods outlined in references such as:

- OSHA - Occupational Safety and Health Administration, U. S. Department of Labor, OSHA Analytical Methods Manual.
- NIOSH - National Institute for Occupational Safety and Health, U. S. Department of Health and Human Services, NIOSH Manual of Analytical Methods, Fourth Edition, 1994, and Updates. NIOSH Method 7300 analyses are performed using a modified digestion procedure to eliminate the use of perchloric acid.
- EPA - U. S. Environmental Protection Agency, Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition, 1999.
- EPA - U. S. Environmental Protection Agency, Analytical Methods, Emission Measurement Center (EMC).

### Analytical Comments:

Unless otherwise noted, all method blanks and laboratory control spikes met method and/or laboratory quality control objectives for the analyses included in this report.

Unless otherwise noted, sample results have been corrected for method blank values.

## LABORATORY REPORT

**Client:**

Clear Creek Associates (Phoenix)  
6155 E. Indian School Rd., Suite 200  
Scottsdale, AZ 85251  
Attn: Todd Cruse

Work Order: PUE1180  
Project Name: Motorola Air  
Project Number: Motorola 52  
Date Received: 05/18/11  
Final Report: 05/20/11 11:56

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica.*

*TestAmerica Laboratories, Inc., Phoenix Laboratory certifies that the analytical results contained herein apply only to the specific sample(s) analyzed.*

*The Chain of Custody, 1 page, is included and is an integral part of this report. This entire report was reviewed and approved for release.*

If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-(602)437-3340

Analyses included in this report were performed by the laboratory shown at the top of this report unless otherwise indicated.

**CASE NARRATIVE:**

**SAMPLE RECEIPT:** Samples were received intact, at 20°C and with chain of custody documentation.

**HOLDING TIMES:** All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.

**PRESERVATION:** Samples requiring preservation were verified prior to sample analysis.

**QA/QC CRITERIA:** All analyses met method criteria, except as noted in the report with data qualifiers.

N1 - 1,2,4-Trichlorobenzene and Hexachlorobutadiene recovered above laboratory acceptance limits in the second source calibration standard analyzed after the initial calibration.

1,2,4-Trichlorobenzene, Benzyl Chloride and Hexachlorobutadiene exceeded laboratory historical acceptance limits in the daily calibration verification standard. All associated samples are non-detect for these compounds and therefore should not be impacted.

**COMMENTS:** No significant observations were made.

**SUBCONTRACTED:** No samples were subcontracted to an outside laboratory for analysis.

## CERTIFICATION SUMMARY

Analyses included in this report were performed by TestAmerica Phoenix, 4625 E. Cotton Center Boulevard, Building 3, Suite 189, Phoenix, AZ 85040.

TestAmerica Phoenix (Lab ID 154268) is accredited by the American Industrial Hygiene Association (AIHA) in the industrial hygiene program for the analytical techniques noted on the scope of accreditation for the following methods: NIOSH 0500, NIOSH 0600, NIOSH 1003, NIOSH 1005, NIOSH 1007, NIOSH 1010, NIOSH 1015, NIOSH 1022, NIOSH 1300, NIOSH 1400, NIOSH 1401, NIOSH 1403, NIOSH 1405, NIOSH 1450, NIOSH 1457, NIOSH 1500, NIOSH 1501, NIOSH 1550, NIOSH 1602, NIOSH 1604, NIOSH 1606, NIOSH 1609, NIOSH 1610, NIOSH 1611, NIOSH, 1613, NIOSH 1615, NIOSH 2000, NIOSH 2016, NIOSH 2532, NIOSH 2546, NIOSH 2551, NIOSH 5000, NIOSH 5503, NIOSH 5506, NIOSH 5600, NIOSH 6006, NIOSH 6009, NIOSH 6010, NIOSH 7300, NIOSH 7303, NIOSH 7600, NIOSH 7903, NIOSH 9100, NIOSH 9102, EPA IP-6A, EPA IP-6C, OSHA PV2120, OSHA 7, OSHA 42, OSHA 47, OSHA 48, OSHA 64, OSHA 69, OSHA 111, OSHA ID-140, OSHA ID-121, OSHA ID-125G, OSHA IS-215, OSHA 1001, OSHA 1002, OSHA 1003, OSHA 1004, OSHA 1005 and OSHA Chemical and Sampling Information for Silane. Volatile organic compounds on 3M Organic Vapor Monitors, Assay Technology Passive Monitors and SKC Passive Monitors. Formaldehyde and other aldehydes and ketones on Assay Technology Passive Monitor. Aldehydes and ketones by EPA TO-11A.

The TestAmerica Phoenix is also licensed through the State of Arizona (AZ0728) for EPA method TO-15.

TestAmerica Phoenix also holds NELAC accreditation through the State of Oregon (AZ100001) for the analytical techniques noted on the scope of accreditation and the State of New York (11898) for NIOSH 6009.

Samples were analyzed using methods outlined in references such as:

- OSHA - Occupational Safety and Health Administration, U. S. Department of Labor, OSHA Analytical Methods Manual.
- NIOSH - National Institute for Occupational Safety and Health, U. S. Department of Health and Human Services, NIOSH Manual of Analytical Methods, Fourth Edition, 1994, and Updates. NIOSH Method 7300 analyses are performed using a modified digestion procedure to eliminate the use of perchloric acid.
- EPA - U. S. Environmental Protection Agency, Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition, 1999.
- EPA - U. S. Environmental Protection Agency, Analytical Methods, Emission Measurement Center (EMC).

Analytical Comments:

Unless otherwise noted, all method blanks and laboratory control spikes met method and/or laboratory quality control objectives for the analyses included in this report.

Unless otherwise noted, sample results have been corrected for method blank values.

*For information concerning certifications of this facility or another TestAmerica facility, please visit our website at [www.TestAmericaInc.com](http://www.TestAmericaInc.com)*

### DATA QUALIFIERS AND DEFINITIONS

- L3** Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
- N1** See case narrative.
- V1** Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.

### ADDITIONAL COMMENTS

May 20, 2011

## LABORATORY REPORT

**Client:**

Clear Creek Associates (Phoenix)  
6155 E. Indian School Rd., Suite 200  
Scottsdale, AZ 85251  
Attn: Todd Cruse

Work Order: PUE1279  
Project Name: Motorola Air  
Project Number: Motorola 52  
Date Received: 05/19/11  
Final Report: 05/20/11 13:17

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica.*

*TestAmerica Laboratories, Inc., Phoenix Laboratory certifies that the analytical results contained herein apply only to the specific sample(s) analyzed.*

*The Chain of Custody, 1 page, is included and is an integral part of this report. This entire report was reviewed and approved for release.*

If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-(602)437-3340

Analyses included in this report were performed by the laboratory shown at the top of this report unless otherwise indicated.

**CASE NARRATIVE:**

**SAMPLE RECEIPT:** Samples were received intact, at 20°C and with chain of custody documentation.

**HOLDING TIMES:** All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.

**PRESERVATION:** Samples requiring preservation were verified prior to sample analysis.

**QA/QC CRITERIA:** All analyses met method criteria, except as noted in the report with data qualifiers.

N1 - 1,2,4-Trichlorobenzene and Hexachlorobutadiene recovered above laboratory acceptance limits in the second source calibration standard analyzed after the initial calibration.

1,2,4-Trichlorobenzene, Benzyl Chloride and Hexachlorobutadiene exceeded laboratory historical acceptance limits in the daily calibration verification standard. All associated samples are non-detect for these compounds and therefore should not be impacted.

**COMMENTS:** No significant observations were made.

**SUBCONTRACTED:** No samples were subcontracted to and outside laboratory for analysis.

## CERTIFICATION SUMMARY

Analyses included in this report were performed by TestAmerica Phoenix, 4625 E. Cotton Center Boulevard, Building 3, Suite 189, Phoenix, AZ 85040.

TestAmerica Phoenix (Lab ID 154268) is accredited by the American Industrial Hygiene Association (AIHA) in the industrial hygiene program for the analytical techniques noted on the scope of accreditation for the following methods: NIOSH 0500, NIOSH 0600, NIOSH 1003, NIOSH 1005, NIOSH 1007, NIOSH 1010, NIOSH 1015, NIOSH 1022, NIOSH 1300, NIOSH 1400, NIOSH 1401, NIOSH 1403, NIOSH 1405, NIOSH 1450, NIOSH 1457, NIOSH 1500, NIOSH 1501, NIOSH 1550, NIOSH 1602, NIOSH 1604, NIOSH 1606, NIOSH 1609, NIOSH 1610, NIOSH 1611, NIOSH, 1613, NIOSH 1615, NIOSH 2000, NIOSH 2016, NIOSH 2532, NIOSH 2546, NIOSH 2551, NIOSH 5000, NIOSH 5503, NIOSH 5506, NIOSH 5600, NIOSH 6006, NIOSH 6009, NIOSH 6010, NIOSH 7300, NIOSH 7303, NIOSH 7600, NIOSH 7903, NIOSH 9100, NIOSH 9102, EPA IP-6A, EPA IP-6C, OSHA PV2120, OSHA 7, OSHA 42, OSHA 47, OSHA 48, OSHA 64, OSHA 69, OSHA 111, OSHA ID-140, OSHA ID-121, OSHA ID-125G, OSHA IS-215, OSHA 1001, OSHA 1002, OSHA 1003, OSHA 1004, OSHA 1005 and OSHA Chemical and Sampling Information for Silane. Volatile organic compounds on 3M Organic Vapor Monitors, Assay Technology Passive Monitors and SKC Passive Monitors. Formaldehyde and other aldehydes and ketones on Assay Technology Passive Monitor. Aldehydes and ketones by EPA TO-11A.

The TestAmerica Phoenix is also licensed through the State of Arizona (AZ0728) for EPA method TO-15.

TestAmerica Phoenix also holds NELAC accreditation through the State of Oregon (AZ100001) for the analytical techniques noted on the scope of accreditation and the State of New York (11898) for NIOSH 6009.

Samples were analyzed using methods outlined in references such as:

- OSHA - Occupational Safety and Health Administration, U. S. Department of Labor, OSHA Analytical Methods Manual.
- NIOSH - National Institute for Occupational Safety and Health, U. S. Department of Health and Human Services, NIOSH Manual of Analytical Methods, Fourth Edition, 1994, and Updates. NIOSH Method 7300 analyses are performed using a modified digestion procedure to eliminate the use of perchloric acid.
- EPA - U. S. Environmental Protection Agency, Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition, 1999.
- EPA - U. S. Environmental Protection Agency, Analytical Methods, Emission Measurement Center (EMC).

Analytical Comments:

Unless otherwise noted, all method blanks and laboratory control spikes met method and/or laboratory quality control objectives for the analyses included in this report.

Unless otherwise noted, sample results have been corrected for method blank values.

*For information concerning certifications of this facility or another TestAmerica facility, please visit our website at [www.TestAmericaInc.com](http://www.TestAmericaInc.com)*

**RE: H&P PROJECT: MC041811-A2 WEEK ONE  
MOTOROLA 52<sup>ND</sup> STREET, OPERABLE UNIT ONE**

Dear Mr. Cruse:

Innovative Technical Solutions, Inc. (ITSI) has completed the data review for Clear Creek Associates' (CCA) Motorola 52<sup>nd</sup> Street, Operable Unit One (OU1), Soil Gas Sampling Investigation. ITSI performed data review as described in the U.S. Environmental Protection Agency (EPA) *National Functional Guidelines for Superfund Organic Data Review, 2005*; and *the Soil Gas Sampling Work Plan, Soil Gas Sampling Investigation, Operable Unit 1, Motorola 52<sup>nd</sup> Street Superfund Site, Phoenix, Arizona, CCA, December 3, 2010, (Amended March 17, 2011)*; and by using criteria in the referenced method.

The acronym and abbreviations list is included as Appendix A. Data review qualifiers have been marked in red directly on the analytical reports provided by the laboratory and are attached as Appendix B. A summary of all qualified data is provided in a qualified results table (QRT) as Appendix C.

## **1.0 CROSS REFERENCE OF SAMPLES VERIFIED**

The analytical data presented in the laboratory Sample Delivery Groups (SDGs) and reported on the date listed in Table 1 were reviewed as a Tier 1B data validation. The SDGs contained data for a selected list of volatile organic compounds (VOCs) by EPA Method TO-15, Modified. The primary analytical laboratory was H&P Mobile Geochemistry, Inc. (H&P) of Carlsbad, California. Table 1 below provides an analytical summary and cross reference for the samples along with the date the report was issued for each SDG.

**Table 1 Analytical Summary and Cross Reference For Method TO-15**

<b>Client Sample ID</b>	<b>Date Sampled</b>	<b>Laboratory SDG Number</b>	<b>Laboratory Report Date</b>	<b>Field Duplicates</b>

FD = Field duplicate sample  
 PS = Parent sample of field duplicate

EPA Tier 1B data validation was performed on the samples listed above. The validation included review of reports from the laboratory equivalent to an EPA Level III data deliverable. Level III data deliverables contain the sample results and chain-of-custody forms along with basic QC summaries including surrogate recoveries, method blank results, and precision and accuracy data summaries for the sample preparation batch. If any analytical problems were encountered, the report also includes a case narrative describing the problem and any potential impact on data quality.

## 2.0 LABORATORY REPORT

The comments and data qualifiers noted by the laboratory in the case narratives were reviewed. Anomalies that required data qualification, if any, are discussed in the sections below.

## 3.0 SAMPLE INTEGRITY

The Chains-of-Custody (COC) April 18 through April 23, 2011 sampling event were available for review. There were no anomalies that required qualification of the data, however the following observation was made.

- A couple of corrections to the COCs were made by writing over the original data. Sample corrections should be done with a single line strike out and the initials of the sampler. No data qualifiers are required.
- The relinquishing time was incorrect on SDG E104067. Since the times the samples were delivered to the laboratory are documented for each sample, no action is required. To maintain a complete custody record, the persons delivering or receiving the samples should accurately document the time the samples are relinquished to the laboratory.

#### **4.0 HOLDING TIME**

The samples were analyzed within the recommended method holding time of 30 minutes after collection.

#### **5.0 INITIAL AND CONTINUING CALIBRATION**

Initial and continuing calibration summaries were not reviewed for this level of data validation, however, laboratory flags were reviewed for calibration anomalies. There were no calibration anomalies that required qualification of the data.

#### **6.0 BLANK EVALUATION**

Method blanks were analyzed to assess laboratory contamination. An equipment blank was collected to assess contamination due to the sampling equipment. There were no compounds detected in the blanks that required qualification of the data.

#### **7.0 LABORATORY CONTROL SAMPLE (LCS)**

A single LCS was reported for each analysis. Quality Control (QC) results were reviewed using the QAPP control limit of 65 to 135 percent for accuracy. There were no anomalies that required qualification of the data except as noted below.

- The percent recovery for trichloroethene was out of the upper QAPP limit of 135 at 136 percent in the LCS associated with the samples from SDG E104101. The associated results which were all positive have been qualified as “J” for an estimate value.

#### **8.0 MATRIX SPIKE (MS) AND MATRIX SPIKE DUPLICATE (MSD)**

A project MS/MSD pair was not collected as required by the QAPP. Instead, a sample duplicate was collected to measure precision and the LCS was used to measure accuracy. The LCS and sample duplicate are discussed in Sections 7.0 and 11.0, respectively. The duplicate requirement of one per day was met and represented a 15 percent frequency for this sample set.

#### **9.0 SURROGATES**

Surrogate spike recoveries were reviewed against the laboratory established control limits. All recoveries were within the established control limits.

## 10.0 COMPOUND QUANTITATION AND IDENTIFICATION

The laboratory reporting limits and quantitative results were reviewed. All reporting limits met the Client Required Reporting Limits (CRDLs) listed in the QAPP.

## 11.0 FIELD DUPLICATE SAMPLES

The field duplicate sets were collected and analyzed for each SDG to measure field and laboratory precision. The relative percent differences (RPDs) for the positive results in the field duplicate pairs were calculated and are listed in Table 2 below. All RPDs were within the criteria of less than 50 except as noted below.

**Table 2 Field Duplicate Samples and RPD Results**

Primary and Duplicate Samples	Lab ID	Analyte	Primary Sample Result $\mu\text{g}/\text{m}^3$	Duplicate Sample Result $\mu\text{g}/\text{m}^3$	RPD %
SV25-15 SV25-15 Dup	E104060-01/02	1,1-Dichloroethene	66	ND	NC/NA
		1,1,2-Trichlorotrifluoroethane	100	ND	NC/NA
		cis-1,2-Dichloroethene	92	ND	NC/NA
		Chloroform	250	200	22
		Trichloroethene	8600	8700	1
		Tetrachloroethene	110	ND	NC/NA
		Chlorobenzene	33	ND	NC/NA
		1,1-Dichloroethene	66	ND	NC/NA
		1,1,2-Trichlorofluoromethane	100	ND	NC/NA
		cis-1,2-Dichloroethene	92	ND	NC/NA
		Chloroform	250	200	22
SV04-15 SV04-15 Dup	E104067-06/07	1,1,2-Trichlorofluoromethane	57	55	4
		Chloroform	46	51	10
		Trichloroethene	2200	2000	10
		Tetrachloroethene	550	450	20
SV17-5 SV17-5 Dup	E104071-10/11	Chloroform	490	460	6
		Trichloroethene	78	53	38
		Bromodichloromethane	71	39	58
		Chlorobenzene	ND	62	NC/NA
SV08-5 SV08-5 Dup	E104079-08/09	Chloroform	240	230	4
		Bromodichloromethane	49	35	33
SV06-15 SV06-15 Dup	E104094-04/05	Chloroform	83	84	1

Primary and Duplicate Samples	Lab ID	Analyte	Primary Sample Result $\mu\text{g}/\text{m}^3$	Duplicate Sample Result $\mu\text{g}/\text{m}^3$	RPD %
SV12-5 SV12-5 Dup	E104101-04/05	Chloroform	120	110	9
		Trichloroethene	88	65	30
		Bromodichloromethane	68	62	9
		1,1,2-Trichlorofluoromethane	ND	45	NC/NA
		Chlorobenzene	ND	43	NC/NA

NA = Not Applicable. Since the field duplicate and primary results are both less than five times the reporting limit, the RPD criteria is not applicable.

NC= Not Calculable

ND = Not Detected

The RPD for bromodichloromethane was out of the QAPP criteria of less than 50 percent at 58 percent, in field duplicate pair SV17-5 / SV17-5 Dup from SDG E104071. Since there was no other measurement of precision for the analysis, the associated positive results for these two compounds in the samples from SDG E104071 have been qualified as "J" for an estimated value. No qualifiers are required for the non-detect results.

## 12.0 RECOMMENDATIONS

ITSI recommends the following actions.

- A laboratory control sample duplicate (LCSD) should be analyzed to provide a measurement of precision for the analysis.
- To maintain a complete custody record, the persons delivering or receiving the samples should accurately document the time the samples are relinquished to the laboratory.

## 13.0 OVERALL ASSESSMENT FOR MOTOROLA 52ND ST OUI WEEK ONE 2011 SAMPLING EVENT

There were no rejected results for this sampling event. Based on the available information, the data as qualified are considered useable for their intended purposes.

We thank you for the opportunity to serve you and look forward to supporting CCA with data review in the future.

Sincerely,

**Innovative Technical Solutions, Inc.**

Evelyn Dawson, CHMM

**RE: H&P PROJECT: MC041811-A2 WEEK TWO  
MOTOROLA 52<sup>ND</sup> STREET OPERABLE UNIT ONE**

Dear Mr. Cruse:

Innovative Technical Solutions, Inc. (ITSI) has completed the data review for Clear Creek Associates' (CCA) Motorola 52<sup>nd</sup> Street, Operable Unit One (OU1), Soil Gas Sampling Investigation. ITSI performed data review as described in the U.S. Environmental Protection Agency (EPA) *National Functional Guidelines for Superfund Organic Data Review, 2005*; and *the Soil Gas Sampling Work Plan, Soil Gas Sampling Investigation, Operable Unit 1, Motorola 52<sup>nd</sup> Street Superfund Site, Phoenix, Arizona, CCA, December 3, 2010, (Amended March 17, 2011)*; and by using criteria in the referenced method.

The acronym and abbreviations list is included as Appendix A. Data review qualifiers have been marked in red directly on the analytical reports provided by the laboratory and are attached as Appendix B. A summary of all qualified data is provided in a qualified results table (QRT) as Appendix C.

**1.0 CROSS REFERENCE OF SAMPLES VERIFIED**

The analytical data presented in the laboratory Sample Delivery Groups (SDGs) and reported on the date listed in Table 1 were reviewed as a Tier 1B data validation. The SDGs contained data for a selected list of volatile organic compounds (VOCs) by EPA Method TO-15, Modified. The primary analytical laboratory was H&P Mobile Geochemistry, Inc. (H&P) of Carlsbad, California. Table 1 below provides an analytical summary and cross reference for the samples along with the date the report was issued for each SDG.

**Table 1 Analytical Summary and Cross Reference for Method TO-15**

FD = Field duplicate sample

PS = Parent sample of field duplicate

EPA Tier 1B data validation was performed on the samples listed above. The validation included review of reports from the laboratory equivalent to an EPA Level III data deliverable. Level III data deliverables contain the sample results and chain-of-custody forms along with basic QC summaries including surrogate recoveries, method blank results, and precision and accuracy data summaries for the sample preparation batch. If any analytical problems were encountered, the report also includes a case narrative describing the problem and any potential impact on data quality.

## 2.0 LABORATORY REPORT

The comments and data qualifiers noted by the laboratory in the case narratives were reviewed. Anomalies that required data qualification, if any, are discussed in the sections below.

## 3.0 SAMPLE INTEGRITY

The Chains-of-Custody (COC) April 25 through April 29, 2011 sampling event were available for review. There were no anomalies that required qualification of the data.

## 4.0 HOLDING TIME

The samples were analyzed within the recommended method holding time of 30 minutes after collection.

## **5.0 INITIAL AND CONTINUING CALIBRATION**

Initial and continuing calibration summaries were not reviewed for this level of data validation, however, laboratory flags were reviewed for calibration anomalies. There were no calibration anomalies that required qualification of the data.

## **6.0 BLANK EVALUATION**

Method blanks were analyzed to assess laboratory contamination. An equipment blank was collected to assess contamination due to the sampling equipment. There were no compounds detected in the blanks that required qualification of the data.

## **7.0 LABORATORY CONTROL SAMPLE (LCS)**

A single LCS was reported for each analysis. Quality Control (QC) results were reviewed using the QAPP control limit of 65 to 135 percent for accuracy. There were no anomalies that required qualification of the data.

## **8.0 MATRIX SPIKE (MS) AND MATRIX SPIKE DUPLICATE (MSD)**

A project MS/MSD pair was not collected as required by the QAPP. Instead, a sample duplicate was collected to measure precision and the LCS was used to measure accuracy. The LCS and sample duplicate are discussed in Sections 7.0 and 11.0, respectively. The duplicate requirement of one per day was met and represented a 12 percent frequency for this sample set.

## **9.0 SURROGATES**

Surrogate spike recoveries were reviewed against the laboratory established control limits. All recoveries were within the established control limits.

## **10.0 COMPOUND QUANTITATION AND IDENTIFICATION**

The laboratory reporting limits and quantitative results were reviewed. All reporting limits met the Client Required Detection Limits (CRDLs) listed in the QAPP except as noted below.

- The field duplicate sample SV35-15 Dup did not achieve the QAPP reporting limits for several non-detect results. A ten times (10X) dilution was required to quantitate the large amount of trichloroethene (TCE) in the sample. The associated primary sample also had similar amounts of TCE and was analyzed at

a 10X dilution for TCE and at one times (1X) dilution for other compounds. The field duplicate sample should have also been analyzed at a 1X dilution to achieve the QAPP reporting limits for the non-detect results. Since this is a field duplicate and not a primary sample, no qualifiers are required.

## 11.0 FIELD DUPLICATE SAMPLES

The field duplicate sets were collected and analyzed for each SDG to measure field and laboratory precision. The relative percent differences (RPDs) for the positive results in the field duplicate pairs were calculated and are listed in Table 2 below. All RPDs were within the criteria of less than 50 except as noted below.

**Table 2 Field Duplicate Samples and RPD Results**

Primary (PO) and Duplicate Samples (D1)	Lab ID	Analyte	Primary Sample Result $\mu\text{g}/\text{m}^3$	Duplicate Sample Result $\mu\text{g}/\text{m}^3$	RPD %
SV22-15 SV22-15 Dup	E104102-07/08	1,1,2-Trichlorotrifluoroethane	42	ND	NC/NA
		Chloroform	43	49	13
		Trichloroethene	100	97	3
		Tetrachloroethene	88	84	5
SV18-15 SV18-15 Dup	E104102-10/11	1,1,2-Trichlorotrifluoroethane	ND	45	NC/NA
		Chloroform	28	29	4
		Tetrachloroethene	180	100	57
		Chlorobenzene	ND	24	NC/NA
*SV35-15 SV35-15 Dup	E104107-06/07	1,1-Dichloroethene	52	ND	NC/NA
		1,1,2-Trichlorotrifluoroethane (F113)	150	ND	NC/NA
		cis-1,2-Dichloroethene	50	ND	NC/NA
		Chloroform	120	ND	NC/NA
		Trichloroethene	17000	16000	6
		Tetrachloroethene	98	ND	NC/NA
SV04-5 SV04-5 Dup	E104119-06/07	1,1,2-Trichlorotrifluoroethane	ND	42	NC/NA
		Trichloroethene	520	440	17
		Tetrachloroethene	260	210	21
		Chlorobenzene	ND	57	NC/NA

Primary (PO) and Duplicate Samples (D1)	Lab ID	Analyte	Primary Sample Result $\mu\text{g}/\text{m}^3$	Duplicate Sample Result $\mu\text{g}/\text{m}^3$	RPD %
SV29-5 SV29-5 Dup	E104124-06/07	1,1,2-Trichlorotrifluoroethane	66	66	0
		Chloroform	160	150	6
		Trichloroethene	3400	2800	19
		Bromodichloromethane	96	94	2
		Tetrachloroethene	130	98	28
		Chlorobenzene	29	53	59/NA
SV44-5 SV44-5 Dup	E104128-10/11	cis-1,2-Dichloroethene	48	ND	NC/NA
		Chloroform	35	26	30
		Trichloroethene	770	690	11
		Tetrachloroethene	130	90	36/NA
		Chlorobenzene	ND	30	NC/NA

NA = Not Applicable. Since the field duplicate and primary results are both less than five times the reporting limit, the RPD criteria is not applicable.

NC= Not Calculable

ND = Not Detected

The RPD for tetrachloroethene was out of the QAPP criteria of less than 50 percent at 57 percent in field duplicate pair SV18-15/ SV18-15Dup from SDG E104102. Since there was no other measurement of precision for the analysis, the associated positive results for this compound in the samples from SDG E104071 have been qualified as “J” for an estimated value. No qualifiers are required for the non-detect results.

\*Field duplicate sample SV35-15 Dup from SDG E104107 was not analyzed at the same dilution as the primary sample, SV35-15, except TCE. No qualifiers are required, however, it is recommended that the laboratory analyzed primary and duplicate samples at the same dilution for each compound.

## 12.0 RECOMMENDATIONS

ITSI recommends the following actions.

- A laboratory control sample duplicate (LCSD) should be analyzed to provide a measurement of precision for the analysis.
- The primary and field duplicate samples should be analyzed at the same dilution for each compound.

### **13.0 OVERALL ASSESSMENT FOR MOTOROLA 52ND ST OU1 WEEK TWO 2011 SAMPLING EVENT**

There were no rejected results for this sampling event. Based on the available information, the data as qualified are considered useable for their intended purposes.

We thank you for the opportunity to serve you and look forward to supporting CCA with data review in the future.

Sincerely,

**Innovative Technical Solutions, Inc.**

**RE: H&P PROJECT: MC041811-A2 WEEK THREE  
MOTOROLA 52<sup>ND</sup> STREET OPERABLE UNIT ONE**

Dear Mr. Cruse:

Innovative Technical Solutions, Inc. (ITSI) has completed the data review for Clear Creek Associates' (CCA) Motorola 52<sup>nd</sup> Street, Operable Unit One (OU1), Soil Gas Sampling Investigation. ITSI performed data review as described in the U.S. Environmental Protection Agency (EPA) *National Functional Guidelines for Superfund Organic Data Review, 2005*; and *the Soil Gas Sampling Work Plan, Soil Gas Sampling Investigation, Operable Unit 1, Motorola 52<sup>nd</sup> Street Superfund Site, Phoenix, Arizona, CCA, December 3, 2010, (Amended March 17, 2011)*; and by using criteria in the referenced method.

The acronym and abbreviations list is included as Appendix A. Data review qualifiers have been marked in red directly on the analytical reports provided by the laboratory and are attached as Appendix B. A summary of all qualified data is provided in a qualified results table (QRT) as Appendix C.

**1.0 CROSS REFERENCE OF SAMPLES VERIFIED**

The analytical data presented in the laboratory Sample Delivery Groups (SDGs) and reported on the date listed in Table 1 were validated as a Tier 1B data validation. The SDGs contained data for a selected list of volatile organic compounds (VOCs) by EPA Method TO-15, Modified. The primary analytical laboratory was H&P Mobile Geochemistry, Inc. (H&P) of Carlsbad, California. Table 1 below provides an analytical summary and cross reference for the samples along with the date the report was issued for each SDG and EPA Tier review level.

**Table 1 Analytical Summary and Cross Reference for Method TO-15**

FD = Field duplicate sample  
 PS = Parent sample of field duplicate

The EPA Tier 1B data validation included review of reports from the laboratory equivalent to an EPA Level III data deliverable. Level III data deliverables contain the sample results and chain-of-custody forms along with basic QC summaries including surrogate recoveries, method blank results, and precision and accuracy data summaries for the sample preparation batch. If any analytical problems were encountered, the report also includes a case narrative describing the problem and any potential impact on data quality. Two of the SDGs underwent an EPA Tier 3 data validation for which the laboratory provided a Level IV data deliverable. Tier 3 data validation included all the items from the Tier 1B verification plus review of the data for the instrument calibrations, sample raw data, compound identification and internal standard recoveries.

## 2.0 LABORATORY REPORT

The comments and data qualifiers noted by the laboratory in the case narratives were reviewed. Anomalies that required data qualification, if any, are discussed in the sections below.

## 3.0 SAMPLE INTEGRITY

The Chains-of-Custody (COC) for week three, May 02 through May 06, 2011, were available for review. There were no anomalies that required qualification of the data, however, the following observations were made.

- A correction to one of the COCs was made by writing over the original data. Sample corrections should be done with a single line strike out and the initials of the sampler. No data qualifiers are required.
- The relinquishing times were missing or incorrect on two of the SDGs. Since the times the samples were delivered to the laboratory are documented for each sample, no action is required. To maintain a complete custody record, the persons delivering or receiving the samples should accurately document the time the samples are relinquished to the laboratory.

#### **4.0 HOLDING TIME**

The samples were analyzed within the recommended method holding time of 30 minutes after collection.

#### **5.0 INSTRUMENT TUNE**

The daily instrument tunes were reviewed for Tier 3. There were no anomalies that required qualification of the data.

#### **6.0 INITIAL AND CONTINUING CALIBRATION**

Initial and continuing calibrations were reviewed for Tier 3 review. There were no calibration anomalies that required qualification of the data, except as noted below.

- The continuing calibration verification percent difference for bromodichloromethane associated with the samples from SDG E105013 was out of the method criteria of less than 30 percent at 53.7 percent. Since the response was biased high, the associated positive results in samples SV08-15 and SV08-5 have been qualified as "J" for an estimated value. No qualifiers are required for the non-detect results.

#### **7.0 BLANK EVALUATION**

Method blanks were analyzed to assess laboratory contamination. There were no compounds detected in the method blanks that required qualification of the data.

## **8.0 LABORATORY CONTROL SAMPLE (LCS)**

A single LCS was reported for each analysis. Quality Control (QC) results were reviewed using the QAPP control limit of 65 to 135 percent for accuracy. There were no anomalies that required qualification of the data.

## **9.0 MATRIX SPIKE (MS) AND MATRIX SPIKE DUPLICATE (MSD)**

A project MS/MSD pair was not collected as required by the QAPP. Instead, a sample duplicate was collected to measure precision and the LCS was used to measure accuracy. The LCS and sample duplicate are discussed in Sections 7.0 and 11.0, respectively. The duplicate requirement of one per day was met and represented a 10 percent frequency for this sample set.

## **10.0 SURROGATES AND INTERNAL STANDARDS**

Surrogate spike recoveries were reviewed against the laboratory established control limits. The recoveries of the internal standards for the Tier 3 validation were reviewed against the method limits. All surrogate and internal standard recoveries were within control limits.

## **11.0 COMPOUND QUANTITATION AND IDENTIFICATION**

The laboratory reporting limits and quantitative results were reviewed. For the Tier 3 validation, review and recalculation of the sample raw data from the instrument was performed. All reporting limits met the Client Required Detection Limits (CRDLs) listed in the QAPP. There were no quantitation anomalies in the Tier 3 validation that required qualification of the data.

## **12.0 FIELD DUPLICATE SAMPLES**

The field duplicate sets were collected and analyzed for each SDG to measure field and laboratory precision. The relative percent differences (RPDs) for the positive results in the field pairs were calculated and are listed in Table 2 below. All RPDs were within the criteria of less than 50 except as noted below.

**Table 2 Field Duplicate Samples and RPD Results**

Primary (PO) and Duplicate Samples (D1)	Lab ID	Analyte	Primary Sample Result $\mu\text{g}/\text{m}^3$	Duplicate Sample Result $\mu\text{g}/\text{m}^3$	RPD %
SV26-15 SV26-15 Dup	E105001-09/10	1,1,2-Trichlorotrifluoroethane	88	77	13
		Chloroform	140	120	15
		Trichloroethene	4200	3100	30
		Tetrachloroethene	130	59	75/NA
		Chlorobenzene	ND	67	NC/NA
SV14-5, SV14-5 Dup	E105008-04/05	1,1,2-Trichlorotrifluoroethane	87	68	25
		Chloroform	160	140	13
		Trichloroethene	90	72	22
		Tetrachloroethene	51	48	6
		Chlorobenzene	ND	85	NC/NA
SV09-15 SV09-15 Dup	E105011-09/10	1,1,2-Trichlorotrifluoroethane	ND	42	NC/NA
		Chloroform	250	220	13
		Trichloroethene	50	42	17
		Chlorobenzene	30	97	106/NA
SV07-5 SV07-5 Dup	E105013-04/05	Chloroform	48	64	29
		Chlorobenzene	ND	110	NC/NA
SV18-5 SV18-5 Dup	E105014-04/05	Tetrachloroethene	120	120	0
		Chlorobenzene	ND	110	NC/NA

NA = Not Applicable. Since the field duplicate and primary results are both less than five times the reporting limit, the RPD criteria is not applicable.

NC= Not Calculable

ND = Not Detected

### 13.0 RECOMMENDATIONS

ITSI recommends the following actions.

- A laboratory control sample duplicate (LCSD) should be analyzed to provide a measurement of precision for the analysis.
- To maintain a complete custody record, the persons delivering or receiving the samples should accurately document the time the samples are relinquished to the laboratory.

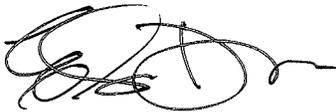

#### **14.0 OVERALL ASSESSMENT FOR MOTOROLA 52ND ST OU1 WEEK THREE 2011 SAMPLING EVENT**

There were no rejected results for this sampling event. Based on the available information, the data as qualified are considered useable for their intended purposes.

We thank you for the opportunity to serve you and look forward to supporting CCA with data review in the future.

Sincerely,

**Innovative Technical Solutions, Inc.**

Evelyn Dawson, CHMM

Mr. Todd Cruse, RG  
Clear Creek Associates  
6155 E. Indian School Road, Suite 200  
Scottsdale, Arizona 85251

**RE: H&P PROJECT: MC041811-A2 WEEK FOUR  
MOTOROLA 52<sup>ND</sup> STREET OPERABLE UNIT ONE**

Dear Mr. Cruse:

Innovative Technical Solutions, Inc. (ITSI) has completed the data review for Clear Creek Associates' (CCA) Motorola 52<sup>nd</sup> Street, Operable Unit One (OU1), Soil Gas Sampling Investigation. ITSI performed data review as described in the U.S. Environmental Protection Agency (EPA) *National Functional Guidelines for Superfund Organic Data Review*, 2005; and *the Soil Gas Sampling Work Plan, Soil Gas Sampling Investigation, Operable Unit 1, Motorola 52<sup>nd</sup> Street Superfund Site, Phoenix, Arizona*, CCA, December 3, 2010, (Amended March 17, 2011); and by using criteria in the referenced method.

The acronym and abbreviations list is included as Appendix A. Data review qualifiers have been marked in red directly on the analytical reports provided by the laboratory and are attached as Appendix B. A summary of all qualified data is provided in a qualified results table (QRT) as Appendix C.

**1.0 CROSS REFERENCE OF SAMPLES VERIFIED**

The analytical data presented in the laboratory Sample Delivery Groups (SDGs) and reported on the date listed in Table 1 were reviewed as a Tier 1B data validation. The SDGs contained data for a selected list of volatile organic compounds (VOCs) by EPA Method TO-15, Modified. The primary analytical laboratory was H&P Mobile Geochemistry, Inc. (H&P) of Carlsbad, California. Table 1 below provides an analytical summary and cross reference for the samples along with the date the report was issued for each SDG.

**Table 1 Analytical Summary and Cross Reference for Method TO-15**

FD = Field duplicate sample  
 PS = Parent sample of field duplicate

EPA Tier 1B data validation was performed on the samples listed above. The validation included review of reports from the laboratory equivalent to an EPA Level III data deliverable. Level III data deliverables contain the sample results and chain-of-custody forms along with basic QC summaries including surrogate recoveries, method blank results, and precision and accuracy data summaries for the sample preparation batch. If any analytical problems were encountered, the report also includes a case narrative describing the problem and any potential impact on data quality.

## 2.0 LABORATORY REPORT

The comments and data qualifiers noted by the laboratory in the case narratives were reviewed. Anomalies that required data qualification, if any, are discussed in the sections below.

## 3.0 SAMPLE INTEGRITY

The Chains-of-Custody (COC) May 9 through May 13, 2011 sampling event were available for review. There were no anomalies that required qualification of the data.

#### **4.0 HOLDING TIME**

The samples were analyzed within the recommended method holding time of 30 minutes after collection.

#### **5.0 INITIAL AND CONTINUING CALIBRATION**

Initial and continuing calibrations were not reviewed for this level of validation, however, the laboratory noted the following anomaly.

- The case narrative and laboratory data flag, C-06, indicated that bromodichloromethane was out of criteria in the continuing calibration verification associated with sample SV37-15. The associated result has been qualified as “J” for an estimated value.

#### **6.0 BLANK EVALUATION**

Method blanks were analyzed for each analysis to assess laboratory contamination. There were no compounds detected in the method blanks that required qualification of the data.

#### **7.0 LABORATORY CONTROL SAMPLE (LCS)**

A single LCS was reported for each analysis. Quality Control (QC) results were reviewed using the QAPP control limit of 65 to 135 percent for accuracy. There were no anomalies that required qualification of the data.

#### **8.0 MATRIX SPIKE (MS) AND MATRIX SPIKE DUPLICATE (MSD)**

A project MS/MSD pair was not collected as required by the QAPP. Instead, a sample duplicate was collected to measure precision and the LCS was used to measure accuracy. The LCS and sample duplicate are discussed in Sections 7.0 and 11.0, respectively. The duplicate requirement of one per day was met and represented a nine percent frequency for this sample set.

#### **9.0 SURROGATES**

Surrogate spike recoveries were reviewed against the laboratory established control limits. All surrogate recoveries were within control limits except as noted below.

- The percent recovery for surrogate 4-bromofluorobenzene was out of the criteria of 56 to 127 percent at 128 percent in sample SV62-15 from SDG E105029. The associated positive results have been qualified “J” for an estimated value. No qualifiers are required for the non-detect results.

## 10.0 COMPOUND QUANTITATION AND IDENTIFICATION

The laboratory reporting limits and quantitative results were reviewed. All reporting limits met the Client Required Detection Limits (CRDLs) listed in the QAPP.

## 11.0 FIELD DUPLICATE SAMPLES

The field duplicate sets were collected and analyzed for each SDG to measure field and laboratory precision. The relative percent differences (RPDs) for the positive results in the field duplicate pairs were calculated and are listed in Table 2 below. All RPDs were within the criteria of less than 50.

**Table 2 Field Duplicate Samples and RPD Results**

Primary and Duplicate Samples	Lab ID	Analyte	Primary Sample Result $\mu\text{g}/\text{m}^3$	Duplicate Sample Result $\mu\text{g}/\text{m}^3$	RPD %
SV28-15 SV28-15 Dup	E105020-05,06	1,1,2-Trichlorotrifluoroethane	79	65	19
		Chloroform	520	400	26
		Trichloroethene	950	690	32
		Tetrachloroethene	170	130	27
		Chlorobenzene	ND	59	NC/NA
SV40-15 SV40-15 Dup	E105023-09,10	Trichloroethene	600	430	33
		Tetrachloroethene	63	ND	NC/NA
		Chlorobenzene	ND	63	NC/NA
SV62-15 SV62-15 Dup	E105029-03,04	1,1-Dichloroethene	65	78	18
		1,1,2-Trichlorotrifluoroethane	300	320	6
		Chloroform	110	110	0
		Trichloroethene	480	330	37
		Tetrachloroethene	90	50	57/NA
		Chlorobenzene	ND	25	NC/NA

Primary and Duplicate Samples	Lab ID	Analyte	Primary Sample Result $\mu\text{g}/\text{m}^3$	Duplicate Sample Result $\mu\text{g}/\text{m}^3$	RPD %
SV44-15 SV44-15 Dup	E105039-07,08	1,1-Dichloroethene	ND	21	NC/NA
		1,1,2-Trichlorotrifluoroethane	72	51	34
		cis-1,2-Dichloroethene	340	320	6
		Chloroform	63	59	7
		Trichloroethene	2500	1900	27
		Tetrachloroethene	360	270	29
		Chlorobenzene	ND	42	NC/NA
SV49-15	E105041-01,02	1,1-Dichloroethene	30	30	0
		1,1,2-Trichlorotrifluoroethane	97	120	21
		Chloroform	160	140	13
		Trichloroethene	1200	870	32
		Tetrachloroethene	62	48	25

NA = Not Applicable. Since the field duplicate and primary results are both less than five times the reporting limit, the RPD criteria is not applicable.

NC= Not Calculable

ND = Not Detected

## 12.0 RECOMMENDATIONS

ITSI recommends that a laboratory control sample duplicate (LCSD) be analyzed to provide a measurement of precision for the analysis.

## 13.0 OVERALL ASSESSMENT FOR MOTOROLA 52ND ST OUI WEEK FOUR 2011 SAMPLING EVENT

There were no rejected results for this sampling event. Based on the available information, the data as qualified are considered useable for their intended purposes.

We thank you for the opportunity to serve you and look forward to supporting CCA with data review in the future.

Sincerely,

**Innovative Technical Solutions, Inc.**

Evelyn Dawson, CHMM

June 28, 2011

Mr. Todd Cruse, RG  
Clear Creek Associates  
6155 E. Indian School Road, Suite 200  
Scottsdale, Arizona 85251

**RE: H&P PROJECT: MC041811-A2 WEEK FIVE  
MOTOROLA 52<sup>ND</sup> STREET OPERABLE UNIT ONE**

Dear Mr. Cruse:

Innovative Technical Solutions, Inc. (ITSI) has completed the data review for Clear Creek Associates' (CCA) Motorola 52<sup>nd</sup> Street, Operable Unit One (OU1), Soil Gas Sampling Investigation. ITSI performed data review as described in the U.S. Environmental Protection Agency (EPA) *National Functional Guidelines for Superfund Organic Data Review*, 2005; and *the Soil Gas Sampling Work Plan, Soil Gas Sampling Investigation, Operable Unit 1, Motorola 52<sup>nd</sup> Street Superfund Site, Phoenix, Arizona*, CCA, December 3, 2010, (Amended March 17, 2011); and by using criteria in the referenced method.

The acronym and abbreviations list is included as Appendix A.

## **1.0 CROSS REFERENCE OF SAMPLES VERIFIED**

The analytical data presented in the laboratory Sample Delivery Groups (SDGs) and reported on the date listed in Table 1 were reviewed as a Tier 1B or Tier 3 data validation. The SDGs contained data for a selected list of volatile organic compounds (VOCs) by EPA Method TO-15, Modified. The primary analytical laboratory was H&P Mobile Geochemistry, Inc. (H&P) of Carlsbad, California. Table 1 below provides an analytical summary and cross reference for the samples along with the date the report was issued for each SDG and EPA tier review level.

**Table 1 Analytical Summary and Cross Reference for Method TO-15**

FD = Field duplicate sample  
 PS = Parent sample of field duplicate

The EPA Tier 1B data verification included review of reports from the laboratory equivalent to an EPA Level III data deliverable. Level III data deliverables contain the sample results and chain-of-custody forms along with basic QC summaries including surrogate recoveries, method blank results, and precision and accuracy data summaries for the sample preparation batch. If any analytical problems were encountered, the report also includes a case narrative describing the problem and any potential impact on data quality. One of the SDGs underwent an EPA Tier 3 data validation for which the laboratory provided a Level IV data deliverable. Tier 3 data validation included all the items from the Tier 1B verification plus review of the data for the instrument calibrations, sample quantitation, compound identification and internal standard recoveries.

## **2.0 LABORATORY REPORT**

The comments and data qualifiers noted by the laboratory in the case narratives were reviewed. Anomalies that required data qualification, if any, are discussed in the sections below.

## **3.0 SAMPLE INTEGRITY**

The Chains-of-Custody (COC) May 16 through May 23, 2011 sampling event were available for review. There were no anomalies that required qualification of the data, however, the following observations were made.

- A correction to one of the COCs was made by writing over the original data. Sample corrections should be done with a single line strike out and the initials of the sampler. No data qualifiers are required.
- The relinquishing times were missing or incorrect on one of the SDGs. Since the times the samples were delivered to the laboratory are documented for each sample, no action is required. To maintain a complete custody record, the persons delivering or receiving the samples should accurately document the time the samples are relinquished to the laboratory.

## **4.0 HOLDING TIME**

The samples were analyzed within the recommended method holding time of 30 minutes after collection.

## **5.0 INSTRUMENT TUNE**

The daily instrument tunes were reviewed for Tier 3. There were no anomalies that required qualification of the data.

## **6.0 INITIAL AND CONTINUING CALIBRATION**

Initial and continuing calibrations were reviewed for Tier 3 review. There were no calibration anomalies that required qualification of the data.

## **7.0 BLANK EVALUATION**

Method blanks were analyzed to assess laboratory contamination. There were no compounds detected in the method blanks that required qualification of the data.

## **8.0 LABORATORY CONTROL SAMPLE (LCS)**

A single LCS was reported for each analysis. Quality Control (QC) results were reviewed using the QAPP control limit of 65 to 135 percent for accuracy. There were no anomalies that required qualification of the data.

## **9.0 MATRIX SPIKE (MS) AND MATRIX SPIKE DUPLICATE (MSD)**

A project MS/MSD pair was not collected as required by the QAPP. Instead, a sample duplicate was collected to measure precision and the LCS was used to measure accuracy. The LCS and sample duplicate are discussed in Sections 7.0 and 11.0, respectively. The duplicate requirement of one per day was met and represented a 10 percent frequency for this sample set.

## **10.0 SURROGATES AND INTERNAL STANDARDS**

Surrogate spike recoveries were reviewed against the laboratory established control limits. The recoveries of the internal standards for the Tier 3 validation were reviewed against the method limits. All surrogate and internal standard recoveries were within control limits.

## **11.0 COMPOUND QUANTITATION AND IDENTIFICATION**

The laboratory reporting limits and quantitative results were reviewed. For the Tier 3 validation, review and recalculation of the sample raw data from the instrument was performed. All reporting limits met the Client Required Detection Limits (CRDLs) listed in the QAPP. There were no quantitation anomalies in the Tier 3 validation that required qualification of the data.

## **12.0 FIELD DUPLICATE SAMPLES**

The field duplicate sets were collected and analyzed for each SDG to measure field and laboratory precision. The relative percent differences (RPDs) for the positive results in the field duplicate pairs were calculated and are listed in Table 2 below. All RPDs were within the criteria of less than 50.

**Table 2 Field Duplicate Samples and RPD Results**

Primary and Duplicate Samples	Lab ID	Analyte	Primary Sample Result $\mu\text{g}/\text{m}^3$	Duplicate Sample Result $\mu\text{g}/\text{m}^3$	RPD %
SV46-15 / SV46-15 Dup	E105046-04, 05	Chloroform	1300	1200	8
		Trichloroethene	330	210	44
		Bromodichloromethane	130	120	8
		Tetrachloroethene	53	ND	NC/NA
		Chlorobenzene	26	39	40
SV59-15 / SV59-15 Dup	E105052-01, 02	1,1,2-Trichlorotrifluoroethane	64	65	2
		Chlorobenzene	ND	45	NC/NA
		Chloroform	84	78	7
		Tetrachloroethene	68	39	54/NA
		Trichloroethene	77	56	32
SV40-5 / SV40-5 Dup	E105056-03, 04	Chlorobenzene	ND	38	NC/NA
		Tetrachloroethene	35	39	11
		Trichloroethene	170	140	19
SV55-5 / SV55-5 Dup	E105062-06, 07	1,1,2-Trichlorotrifluoroethane	40	ND	NC/NA
		Chlorobenzene	ND	26	NC/NA
		Chloroform	870	760	14
		Tetrachloroethene	36	ND	NC/NA
		Trichloroethene	340	270	23
SV42-15 / SV42-15 Dup	E105067-02, 03	Chlorobenzene	ND	41	NC/NA
		Chloroform	85	82	4
		Trichloroethene	240	190	23
SV53-15 / SV53-15 Dup	E105073-07, 08	1,1,2-Trichlorotrifluoroethane	59	45	27
		Bromodichloromethane	59	55	7
		Chlorobenzene	ND	70	NC
		Chloroform	280	270	4
		Tetrachloroethene	77	52	39
		Trichloroethene	2900	2200	28

NA = Not Applicable. Since the field duplicate and primary results are both less than five times the reporting limit, the RPD criteria is not applicable.

NC= Not Calculable

ND = Not Detected

### 13.0 RECOMMENDATIONS

ITSI recommends the following actions.

- A laboratory control sample duplicate (LCSD) should be analyzed to provide a measurement of precision for the analysis.
- To maintain a complete custody record, the persons delivering or receiving the samples should accurately document the time the samples are relinquished to the laboratory.

### 14.0 OVERALL ASSESSMENT FOR MOTOROLA 52ND ST OU1 WEEK FIVE 2011 SAMPLING EVENT

There were no qualified results for this sampling event. Based on the available information, the data are considered useable for their intended purposes.

We thank you for the opportunity to serve you and look forward to supporting CCA with data review in the future.

Sincerely,

**Innovative Technical Solutions, Inc.**

Evelyn Dawson, CHMM

Program Chemist

**RE: ITSI DATA REVIEW REPORT  
MOTOROLA 52<sup>ND</sup> STREET  
SOIL GAS SAMPLING INVESTIGATION  
PROJECT NUMBER 005086-016**

Dear Mr. Cruse:

Innovative Technical Solutions, Inc. (ITSI) has completed the data review for Clear Creek Associates' (CCA) Motorola 52<sup>nd</sup> Street, Operable Unit One (OU1), Soil Gas Sampling Investigation. ITSI performed data review as described in the U.S. Environmental Protection Agency (EPA) *National Functional Guidelines for Superfund Organic Data Review, 2005*; and *the Soil Gas Sampling Work Plan, Soil Gas Sampling Investigation, Operable Unit 1, Motorola 52<sup>nd</sup> Street Superfund Site, Phoenix, Arizona, CCA, December 3, 2010, (Amended March 17, 2011)*; and by using criteria in the referenced method.

The acronym and abbreviations list is included as Appendix A. Data review qualifiers have been marked in red directly on the analytical reports provided by the laboratory and are attached as Appendix B. A summary of all qualified data is provided in a qualified results table (QRT) as Appendix C. A summary of the field duplicate pair results is provided in the Field Duplicate Table as Appendix D.

## **1.0 CROSS REFERENCE OF SAMPLES VERIFIED**

The analytical data presented in the laboratory Sample Delivery Groups (SDGs) and reported on the date listed in Table 1 were reviewed as a Tier 1B data validation. The SDGs contained data for a full list of volatile organic compounds (VOCs) by EPA Method TO-15. The primary analytical laboratory was Test America of Phoenix,

Global Infrastructure

Environmental

FD = Field duplicate sample

PS = Parent sample of field duplicate

EPA Tier 1B data validation was performed on the samples listed above. The validation included review of reports from the laboratory equivalent to an EPA Level III data deliverable. Level III data deliverables contain the sample results and chain-of-custody forms along with basic Quality Control (QC) summaries including surrogate recoveries, method blank results, and precision and accuracy data summaries for the sample preparation batch. If any analytical problems were encountered, the report also includes a case narrative describing the problem and any potential impact on data quality.

## 2.0 LABORATORY REPORT

The comments and data qualifiers noted by the laboratory in the case narratives were reviewed. Anomalies that required data qualification, if any, are discussed in the sections below.

## 3.0 SAMPLE INTEGRITY

The Chains-of-Custody (COC) June 14 through June 18, 2011 sampling event were available for review. There were no anomalies that required qualification of the data.

#### **4.0 HOLDING TIME**

The samples were analyzed within the recommended method holding time of 30 days after collection.

#### **5.0 INITIAL AND CONTINUING CALIBRATION**

Initial and continuing calibrations were not reviewed for this level of validation.

#### **6.0 BLANK EVALUATION**

Method blanks were analyzed for each analysis to assess laboratory contamination. There were no compounds detected in the method blanks that required qualification of the data.

#### **7.0 LABORATORY CONTROL SAMPLE (LCS) AND LABORATORY CONTROL SAMPLE (LCSD)**

An LCS/LCSD pair was reported for each analysis. QC results were reviewed using the QAPP control limit of 65 to 135 percent for accuracy and 35 for precision. There were no anomalies that required qualification of the data.

#### **8.0 MATRIX SPIKE (MS) AND MATRIX SPIKE DUPLICATE (MSD)**

A project MS/MSD pair was not collected as required by the QAPP. Instead, an LCS/LCSD, which is discussed in Section 7.0, was used to measure analytical precision.

#### **9.0 SURROGATES**

Surrogate spike recoveries were reviewed against the laboratory established control limits. All surrogate recoveries were within control limits.

#### **10.0 COMPOUND QUANTITATION AND IDENTIFICATION**

The laboratory reporting limits and quantitative results were reviewed. All reporting limits met the Client Required Detection Limits (CRDLs) listed in the QAPP except for methylene chloride as discussed below. Quantitation anomalies noted by the laboratory in the case narrative or indicated by laboratory qualifiers are also discussed below.

- The reporting limits for methylene chloride were raised above the CRDLs for the non-detect results in samples SV72-15 and SV72-5 from SDG PUF0898 due to high levels of target analytes. No qualifiers are required.
- The laboratory case narrative indicated that the results for trichloroethene in samples SV64-15 and SV64-5 from SDG PUF0898 were possibly due to carry-over from the previous sample analysis. The associated results were flagged “J+” for an estimated value with a high bias.
- The laboratory qualifiers indicated that the results for trichloroethene exceeded the calibration range samples SV72-15 and SV72-5 from SDG PUF0898. The results have been qualified “J” for an estimated value.

## 11.0 FIELD DUPLICATE SAMPLES

A field duplicate set were collected and analyzed as part of SDG PUF0898 to measure field and laboratory precision. The results of the field duplicate and parent samples were compared and are summarized in the Field Duplicate Table presented as Appendix D. All field duplicate results were acceptable except as noted below.

- The relative percent difference (RPD) for several compounds were out of the QAPP control limit of less than 50 in field duplicate pair SV67-15 / SV67-15 Dup. The associated results have been qualified as “J” for an estimated value or reporting limit.
- The RPDs could not be calculated for 4-methyl-2-pentanone, cyclohexane and trichloroethene in the field duplicate pair SV67-15 / SV67-15 Dup due to one of the results reported as non-detect. Since the other results for these compounds were greater than five times the reporting limit, it is the professional judgment of the validator that the field duplicate and parent sample results are in disagreement and, therefore, have been qualified as “J” or “UJ” for an estimated value or reporting limit.

## 12.0 RECOMMENDATIONS

There are no recommendations.

### **13.0 OVERALL ASSESSMENT FOR MOTOROLA 52ND ST JUNE 14 THROUGH JUNE 18, 2011 SAMPLING EVENT**

There were no rejected results for this sampling event. Based on the available information, the data as qualified are considered useable for their intended purposes.

We thank you for the opportunity to serve you and look forward to supporting CCA with data review in the future.

Sincerely,

**Innovative Technical Solutions, Inc.**

Notes

µg/m<sup>3</sup> micrograms per cubic meter

Agreement

FD = field duplicate

NA = RPD not applicable since both samples results are less than five times the reporting limit or non-detect

NC = RPD not calculable due to one sample result reported as non-detect.

No = RPD greater than 50 and at least one sample result is greater than five times the reporting limit.

\*No = RPD not calculable due to one result reported as non-detect, other sample result is at least 5X the reporting limit.

RPD = Relative percent difference

Yes = RPD less than control limit of 50

**RE: ITSI DATA REVIEW REPORT  
MOTOROLA 52<sup>ND</sup> STREET  
SOIL GAS SAMPLING INVESTIGATION  
PROJECT NUMBER 005086-016**

Dear Mr. Cruse:

Innovative Technical Solutions, Inc. (ITSI) has completed the data review for Clear Creek Associates' (CCA) Motorola 52<sup>nd</sup> Street, Operable Unit One (OU1), Soil Gas Sampling Investigation. ITSI performed data review as described in the U.S. Environmental Protection Agency (EPA) *National Functional Guidelines for Superfund Organic Data Review*, 2005; and *the Soil Gas Sampling Work Plan, Soil Gas Sampling Investigation, Operable Unit 1, Motorola 52<sup>nd</sup> Street Superfund Site, Phoenix, Arizona*, CCA, December 3, 2010, (Amended March 17, 2011); and by using criteria in the referenced method.

The acronym and abbreviations list is included as Appendix A. Data review qualifiers have been marked in red directly on the analytical reports provided by the laboratory and are attached as Appendix B. A summary of all qualified data is provided in a qualified results table (QRT) as Appendix C. A summary of the field duplicate pair results is provided in the Field Duplicate Table as Appendix D.

## **1.0 CROSS REFERENCE OF SAMPLES VERIFIED**

The analytical data presented in the laboratory Sample Delivery Groups (SDGs) and reported on the date listed in Table 1 were reviewed as a Tier 1B data validation. The SDGs contained data for a full list of volatile organic compounds (VOCs) by EPA Method TO-15. The primary analytical laboratory was H&P Mobile Chemistry Inc. of

Carlsbad, California. Table 1 below provides an analytical summary and cross reference for the samples along with the date the report was issued for each SDG.

**Table 1 Analytical Summary and Cross Reference for Method TO-15**

Client Sample ID	Date Sampled	Laboratory SDG Number	Laboratory Report Date	Type
SV73-15	07/28/2011	E108004-01	08/10/2011

FD = Field duplicate sample  
 PS = Parent sample of field duplicate

EPA Tier 1B data validation was performed on the samples listed above. The validation included review of reports from the laboratory equivalent to an EPA Level III data deliverable. Level III data deliverables contain the sample results and chain-of-custody forms along with basic Quality Control (QC) summaries including surrogate recoveries, method blank results, and precision and accuracy data summaries for the sample preparation batch. If any analytical problems were encountered, the report also includes a case narrative describing the problem and any potential impact on data quality.

## 2.0 LABORATORY REPORT

The comments and data qualifiers noted by the laboratory in the case narratives were reviewed. Anomalies that required data qualification, if any, are discussed in the sections below.

### **3.0 SAMPLE INTEGRITY**

The Chains-of-Custody (COC) for July 28 and August 01, 2011 sampling events were available for review. There were no anomalies that required qualification of the data, however the following observation was made.

- Corrections to the COC from SDG E108004 were made by writing over the original data. Sample corrections should be done with a single line strike out and the initials of the sampler. No data qualifiers are required.

### **4.0 HOLDING TIME**

The samples were analyzed within the recommended method holding time of 30 days after collection.

### **5.0 INITIAL AND CONTINUING CALIBRATION**

The initial and continuing calibrations were not reviewed for this level of validation, however, the laboratory noted the following calibration anomaly.

- The laboratory qualifiers indicated that the percent difference for 2-butanone was out of criteria in the continuing calibration verification associated with sample SV71-15 from SDG E108019. The result for 2-butanone in the above sample has been qualified as "J" for an estimated value.

### **6.0 BLANK EVALUATION**

Method blanks were analyzed for each analysis to assess laboratory contamination. There were no compounds detected in the method blanks that required qualification of the data.

### **7.0 LABORATORY CONTROL SAMPLE (LCS) AND LABORATORY CONTROL SAMPLE (LCSD)**

An LCS/LCSD pair was reported for each analysis. QC results were reviewed using the QAPP control limit of 65 to 135 percent for accuracy and 35 for precision. The laboratory reported an abbreviated list of compounds in the LCS/LCSD pairs. There were no anomalies that required qualification of the data.

## **8.0 MATRIX SPIKE (MS) AND MATRIX SPIKE DUPLICATE (MSD)**

Project MS/MSD pairs were not collected as required by the QAPP. Instead, LCS/LCSD pairs, which are discussed in Section 7.0, were used to measure analytical precision and accuracy.

## **9.0 SURROGATES**

Surrogate spike recoveries were reviewed against the laboratory established control limits. All surrogate recoveries were within control limits.

## **10.0 COMPOUND QUANTITATION AND IDENTIFICATION**

The laboratory reporting limits and quantitative results were reviewed. All reporting limits met the Client Required Detection Limits (CRDLs) listed in the QAPP except as discussed below. Quantitation anomalies noted by the laboratory in the case narrative or indicated by laboratory qualifiers are also discussed below.

- The reporting limits for the non-detect results for samples SV71-5, SV72-15 and SV72-5 from SDG E108019 were elevated due to presence of high levels of target analytes. No qualifiers are required.
- Acetone in samples SV76-15, SV77-5 and SV78-5 and 2-butanone in sample SV78-5 from SDG E108004 were reported above the calibration range of the instrument. The associated samples results have been qualified as “J” for an estimated value.

## **11.0 FIELD DUPLICATE SAMPLES**

A field duplicate sets were collected and analyzed to measure field and laboratory precision. The results of the field duplicate and parent samples were compared and are summarized in the Field Duplicate Table presented as Appendix D. All field duplicate results were acceptable except as noted below.

- The relative percent difference (RPD) for carbon disulfide was out of the QAPP criteria of less than 50 at 52 percent in the field duplicate pair SV75-15/SV75-15 dup from SDG E108004. The associated results in the field duplicate pair have been qualified as “J” for an estimated value.

## 12.0 RECOMMENDATIONS

ITSI recommends that sample corrections should be done with a single line strike out and the initials of the sampler.

## 13.0 OVERALL ASSESSMENT FOR MOTOROLA 52ND ST JULY 28 AND AUGUST 1, 2011 SAMPLING EVENTS

There were no rejected results for this sampling event. Based on the available information, the data as qualified are considered useable for their intended purposes.

We thank you for the opportunity to serve you and look forward to supporting CCA with data review in the future.

Sincerely,

**Innovative Technical Solutions, Inc.**

Evelyn Dawson, CHMM

Program Chemist

Notes

$\mu\text{g}/\text{m}^3$  micrograms per cubic meter

FD = field duplicate

NA = RPD not applicable since both samples results are less than five times the reporting limit or non-detect

NC = RPD not calculable due to one sample result reported as non-detect.

No = RPD greater than 50 and at least one sample result is greater than five times the reporting limit.

RL = reporting limit

RPD = relative percent difference

Yes = RPD less than control limit of 50

**RE: ITSI DATA REVIEW REPORT  
MOTOROLA 52<sup>ND</sup> STREET  
SOIL GAS SAMPLING INVESTIGATION  
PROJECT NUMBER 005086-016**

Dear Mr. Cruse:

Innovative Technical Solutions, Inc. (ITSI) has completed the data review for Clear Creek Associates' (CCA) Motorola 52<sup>nd</sup> Street, Operable Unit One (OU1) confirmation sample results for the Soil Gas Sampling Investigation. ITSI performed data review as described in the U.S. Environmental Protection Agency (EPA) *National Functional Guidelines for Superfund Organic Data Review*, 2005; and *the Soil Gas Sampling Work Plan, Soil Gas Sampling Investigation, Operable Unit 1, Motorola 52<sup>nd</sup> Street Superfund Site, Phoenix, Arizona, CCA, December 3, 2010, (Amended March 17, 2011)*; and by using criteria in the referenced method.

The acronym and abbreviations list is included as Appendix A. Data review qualifiers have been marked in red directly on the analytical reports provided by the laboratory and are attached as Appendix B. A summary of all qualified data is provided in a qualified results table (QRT) as Appendix C. A summary of the field duplicate pair results is provided in the Field Duplicate Table as Appendix D.

## **1.0 CROSS REFERENCE OF SAMPLES VERIFIED**

The analytical data presented in the laboratory Sample Delivery Groups (SDGs) and reported on the dates listed in Table 1 were reviewed as a Tier 1B data validation. The SDGs contained data for a full list of volatile organic compounds (VOCs) by EPA Method TO-15. The analytical laboratories for the confirmation sample analysis were H&P Mobile Chemistry Inc. of Carlsbad, California and Test America (TA) of Phoenix,

Arizona. Table 1 below provides an analytical summary and cross reference for the samples along with the date the report was issued for each SDG.

**Table 1 Analytical Summary and Cross Reference for Method TO-15**

Client Sample ID	Date Sampled	Lab	Laboratory SDG Number	Laboratory Report Date	Type
SV69-15	06/15/2011	TA	PUF0898-01	06/27/2011	
SV69-5	06/15/2011	TA	PUF0898-02	06/27/2011

SV79-15 dup	08/01/2011	H&P	E108019-16	08/16/2011	FD
SV79-5	08/01/2011	H&P	E108019-17	08/16/2011	

FD = Field duplicate sample  
 PS = Parent sample of field duplicate

EPA Tier 1B data validation was performed on the samples listed above. The validation included review of reports from the laboratory equivalent to an EPA Level III data deliverable. Level III data deliverables contain the sample results and chain-of-custody forms along with basic Quality Control (QC) summaries including surrogate recoveries, method blank results, and precision and accuracy data summaries for the sample

preparation batch. If any analytical problems were encountered, the report also includes a case narrative describing the problem and any potential impact on data quality.

## **2.0 LABORATORY REPORT**

The comments and data qualifiers noted by the laboratory in the case narratives were reviewed. Anomalies that required data qualification, if any, are discussed in the sections below.

## **3.0 SAMPLE INTEGRITY**

The Chains-of-Custody (COC) for the June 15, 28 and August 01, 2011 sampling events were available for review. There were no anomalies that required qualification of the data, however, the following observation was made.

- The custody trail for the samples from SDG E106096 was incomplete. The release of the samples to the shipping carrier was not documented on the COC. Since the tracking number from the shipping company was documented on the COC, no action is required.

## **4.0 HOLDING TIME**

The samples were analyzed within the recommended method holding time of 30 days after collection.

## **5.0 INITIAL AND CONTINUING CALIBRATION**

The initial and continuing calibrations were not reviewed for this level of validation, however, the laboratory noted the following calibration anomaly.

- The laboratory qualifiers indicated that the percent difference for 2-butanone was out of criteria in the continuing calibration verification associated with samples SV76-15, SV75-15, SV75-5 and SV73-15 from SDG E108019. The results for 2-butanone in the above samples have been qualified as “J” for an estimated value.

## **6.0 BLANK EVALUATION**

Method blanks were analyzed for each analysis to assess laboratory contamination. There were no compounds detected in the method blanks that required qualification of the data.

## **7.0 LABORATORY CONTROL SAMPLE (LCS) AND LABORATORY CONTROL SAMPLE (LCSD)**

An LCS/LCSD pair was reported for each analysis. QC results were reviewed using the QAPP control limit of 65 to 135 percent for accuracy and 35 for precision. The laboratory reported an abbreviated list of compounds in the LCS/LCSD pairs. There were no anomalies that required qualification of the data.

## **8.0 MATRIX SPIKE (MS) AND MATRIX SPIKE DUPLICATE (MSD)**

Project MS/MSD pairs were not collected as required by the QAPP. Instead, LCS/LCSD pairs, which are discussed in Section 7.0, were used to measure analytical precision and accuracy.

## **9.0 SURROGATES**

Surrogate spike recoveries were reviewed against the laboratory established control limits. All surrogate recoveries were within control limits.

## **10.0 COMPOUND QUANTITATION AND IDENTIFICATION**

The laboratory reporting limits and quantitative results were reviewed. All reporting limits met the Client Required Detection Limits (CRDLs) listed in the QAPP. There were no quantitation anomalies that required qualification of the data, however, the following observation was made.

- Several non-detect results in samples SV72-15, SV72-5, SV71-15 and SV71-5 from SDG E106096 were elevated due to high levels of target analytes. No qualifiers are required.

## **11.0 FIELD DUPLICATE SAMPLES**

A field duplicate pair was collected for SDG E108019 and analyzed to measure field and laboratory precision. The results of the field duplicate and parent samples were compared and are summarized in the Field Duplicate Table presented as Appendix D. All field duplicate results were in agreement.

## **12.0 RECOMMENDATIONS**

There are no recommendations.

### **13.0 OVERALL ASSESSMENT FOR MOTOROLA 52ND ST JUNE 15, JUNE 28 AND AUGUST 1, 2011 CONFIRMATION SAMPLING EVENT**

There were no rejected results for this sampling event. Based on the available information, the data as qualified are considered useable for their intended purposes.

We thank you for the opportunity to serve you and look forward to supporting CCA with data review in the future.

Sincerely,

**Innovative Technical Solutions, Inc.**

Evelyn Dawson, CHMM

Program Chemist

## **LIST OF ACRONYMS AND ABBREVIATIONS**

CCA	Clear Creek Associates
COC	chain-of-custody
CRDL	Client Required Reporting Limit
EPA	U.S. Environmental Protection Agency
ITSI	Innovative Technical Solutions, Inc.
LCS/LCSD	laboratory control spike/ laboratory control spike duplicate
MS/MSD	matrix spike/matrix spike duplicate
QAPP	Quality Assurance Project Plan
QC	quality control
QRT	Qualified Results Table
SDG	Sample Delivery Group
VOC	volatile organic compound

## TECHNICAL MEMORANDUM

---

**TO:** JENN MCCALL – FREESCALE SEMICONDUCTOR, INC.  
**FROM:** THOMAS SURIANO, R.G. – CLEAR CREEK ASSOCIATES, PLC  
**SUBJECT:** CHLOROFORM AND BROMODICHLOROMETHANE IN SOIL GAS  
MOTOROLA 52<sup>ND</sup> STREET SUPERFUND SITE  
OPERABLE UNIT 1 AREA  
**DATE:** JUNE 4, 2012

---

### Background

As part of a soil gas to indoor air vapor intrusion evaluation, a soil gas investigation was conducted in the Operable Unit 1 Study Area of the Motorola 52<sup>nd</sup> Street Superfund Site (Figure 1). The purpose of the investigation was to evaluate the soil gas to indoor air exposure pathway for an area underlain by a trichloroethene (TCE) groundwater plume. The investigation was conducted by Clear Creek Associates, PLC (Clear Creek) on behalf of Freescale Semiconductor, Inc. (Freescale) in accordance with a Consent Agreement between Freescale and the U.S. Environmental Protection Agency (EPA). The soil gas investigation was conducted between April 18 and July 28, 2011. As part of the investigation, soil gas samples were collected from 77<sup>1</sup> locations equipped with temporary soil gas probes (Figure 2). Each temporary soil gas probe was dual completion with probes installed at 5 and 15 feet below ground surface (ft bgs). Probes were constructed of 1/8-inch diameter Teflon tubing with microfilter sampling tips. After an equilibration period, soil gas samples were collected and analyzed for select parameters by a modified EPA Method TO-15 in a mobile laboratory or by EPA Method TO-15 in a fixed laboratory. A confirmation sample was also collected at each location. The investigation protocol is documented in the *Soil Gas Sampling Work Plan, Soil Gas Sampling Investigation, Operable Unit 1, Motorola 52<sup>nd</sup> Street Superfund Site, Phoenix, Arizona* (Clear Creek Associates, December 3, 2010).

### Results

The maximum observed concentrations of TCE, chloroform and bromodichloromethane (BDCM) from the 5 ft bgs and 15 ft bgs sampling ports are presented on Tables 1 and 2, respectively. As shown on Figure 3, chloroform was detected at all but five of the soil gas sampling locations – even at locations with low to no detectable levels of TCE. While not as widely distributed, BDCM was detected at approximately 1/3 of the soil gas sampling locations, including some locations with low to no detectable levels of TCE

---

<sup>1</sup> Temporary probes were installed in a total of 79 locations, including contingent locations. Sampling was determined not to be necessary at two of the contingent locations.

(Figure 4). The Soil Gas Human Health Screening Levels (SGHSLs) for chloroform and BDCM adopted in the Soil Gas Sampling Work Plan are  $48 \mu\text{g}/\text{m}^3$  and  $29 \mu\text{g}/\text{m}^3$ , respectively (Clear Creek Associates, December 3, 2010). With such low SGHSLs, the majority of the detections of chloroform and BDCM were in excess of the SGHSL even where TCE was not present.

The wide-spread presence of chloroform and BDCM observed during the soil gas investigation was unexpected based on our understanding of the facility history. As part of the Remedial Investigation at the site, extensive investigations of potential sources at the former 52<sup>nd</sup> Street facility have been conducted. The investigations included chemical inventories, operational reviews, employee interviews in addition to physical investigations of soil, soil gas and groundwater in each of the identified potential source areas at the 52<sup>nd</sup> Street facility. Neither chloroform nor carbon tetrachloride (which can degrade to chloroform under anaerobic conditions) were used at the facility (Dames & Moore, Remedial Investigation, Motorola 52<sup>nd</sup> Street Superfund Site RI/FS, June 1987). The absence of a source is confirmed by the available groundwater monitoring data. Only a single detection of carbon tetrachloride at  $1.2 \mu\text{g}/\text{L}$  in one bedrock monitoring well has been reported in the OU1 area. Although chloroform has been detected in groundwater, it is not widely distributed and the observed concentrations tend to be low. During the source investigation, the presence of chloroform was associated with the use of chlorinated municipal water supplies at the facility. Similarly, BDCM is generally not used as an industrial solvent but BDCM is formed during the chlorination of municipal water (ATSDR ToxFAQs <http://www.atsdr.cdc.gov/toxfaqs/tf.asp?id=707&tid=127>). Summary tables of the BDCM, carbon tetrachloride and chloroform results from groundwater monitoring wells in the vicinity of the OU1 soil gas study area are included as Attachments A, B and C, respectively.

With no evidence of a source at the facility, we then evaluated whether there was any correlation between the presence of chloroform and BDCM in soil gas and the presence of TCE in soil gas. This evaluation was complicated by several outlier data points in the soil gas investigation. The outlier data are evident when evaluating the cross-plot of TCE vs chloroform using all data from 5 ft bgs (Figure 5). The outlier data have such a large difference in observed concentrations, they can arbitrarily affect, or leverage, the best fit line to imply a correlation where none exists. Based on Figure 5, outlier data were defined as data points with TCE concentrations in excess of  $15,000 \mu\text{g}/\text{m}^3$ . We removed the outlier data points identified on Tables 1 and 2 and developed new cross plots. We concluded that the distribution of data points showed no correlation between the concentration of TCE and the concentration of chloroform present in soil gas.

This conclusion is supported by both the calculated correlation coefficient (or  $r$  value) and the coefficient of determination (or  $r^2$  value). These values were examined to estimate the strength of the relationship, or correlation, between TCE and chloroform and TCE and BDCM.

The  $r$  value is a measure of the strength of a relationship between two variables.  $R$  values are  $-1 \leq r \leq +1$  with the  $+$  and  $-$  signs used for positive (both increasing) correlations or negative (one decreases as the other increases), respectively.  $R$  values greater than 0.8 indicate that the correlation is strong while  $r$  values less than 0.5 indicate that the correlation is weak. Using the data sets with the outlier TCE values

removed, the r value was calculated for TCE vs chloroform (Tables 3A and 4A for 5 ft and 15 ft bgs, respectively) and TCE vs BDCM (Tables 3B and 4B for 5 ft bgs and 15 ft bgs, respectively) as summarized below.

**Calculated r values**

	5 ft bgs	15 ft bgs
TCE vs Chloroform	0.09	0.10
TCE vs Bromodichloromethane	0.15	0.06

The calculated r values noted above are all significantly below 0.8 indicating that there is no correlation between the concentration of TCE and the concentration of either chloroform or BDCM observed in soil gas.

Cross-plots of TCE vs. chloroform and TCE vs. BDCM were also developed for the 5 ft bgs and 15 ft bgs after removing the outlier data points (Tables 3A and 3B for TCE-chloroform at 5 ft bgs and 4A and 4B for TCE-BDCM at 5 ft and 15 ft bgs). The cross plots for the 5 ft bgs data for TCE vs chloroform are shown on Figure 6 and for TCE vs BDCM on Figure 7. The cross plots for the 15 ft bgs data for TCE vs chloroform are shown on Figure 8 and for TCE vs BDCM on Figure 9. The cross plots shown on Figures 6 through 9 also show the best fit line<sup>2</sup> and the coefficient of determination (or r<sup>2</sup> value). The coefficient of determination is such that  $0 \leq r^2 \leq 1$  and is a measure of the strength of the linear relationship between the two variables. The results are summarized below.

**Calculated r<sup>2</sup> values**

	5 ft bgs	15 ft bgs
TCE vs Chloroform	0.0085	0.0095
TCE vs Bromodichloromethane	0.022	0.0037

The r<sup>2</sup> value can be read as a percentage of the variance that can be explained by the linear relationship between the two values. In other words, for the 5 ft bgs data set, only 0.85% of the variance in the chloroform concentration can be explained by variance in the TCE concentration with the remaining 99.15% of the variance being unexplained. The r<sup>2</sup> values noted above confirm that there is no relation between the observed TCE and chloroform or BDCM concentrations.

<sup>2</sup> The best fit line was auto-calculated by Excel™ using the least squares method.

### Municipal Water Supply as Trihalomethane Source

The lack of correlation between TCE and chloroform and TCE and BDCM suggests that the Chloroform and BDCM has a different source than TCE. To evaluate whether chloroform and BDCM may originate from the same source, a scatter plot of chloroform versus BDCM was prepared (Figure 10). Only the results for sampling ports with positive detections of both chloroform and BDCM were plotted and the results were posted using a log-log scale so that all results are visible. The majority of results form a strong trend, consistent with the two compounds originating from a common source.

Similar to the evaluation of the TCE data, two data points with anomalously high chloroform (SV72) and BDCM (SV35) results were removed and the r values calculated. The results are posted on Tables 5A and 5B for the data from 5 ft and 15 ft bgs sampling ports, respectively. The calculated r values, shown below, indicate that there is a strong correlation between the chloroform and BDCM observed in soil gas.

#### **Calculated r values**

	5 ft bgs	15 ft bgs
Chloroform vs Bromodichloromethane	0.74	0.75

Cross-plots of chloroform vs. BDCM were also developed for the 5 ft bgs and 15 ft bgs data as shown on Figures 11 and 12, respectively. The cross plots also show the best fit line, assuming a linear relationship, and the  $r^2$  value. The results, summarized below, indicate that there is a reasonably strong correlation between the chloroform and BDCM observed in soil gas.

#### **Calculated $r^2$ values**

	5 ft bgs	15 ft bgs
Chloroform vs Bromodichloromethane	0.54	0.56

The results of this analysis indicate that chloroform and BDCM originate from a common source but that the source of chloroform and BDCM is different than the source of the TCE observed in the OU1 area. A potential common source of chloroform and BDCM does exist in the soil gas investigation study area. The soil gas sampling locations were generally constructed in city rights-of-way. Underground utilities, including municipal water supply and sewer lines, are located within the rights-of-way throughout the study area. Additionally, many of the residential yards or landscaped areas are watered with chlorinated municipal water supplies. Both chloroform and BDCM are disinfection by-products formed as a result of the chlorination of municipal water supplies and volatilization from a municipal water supply source would be consistent with a common source for the observed chloroform and BDCM in soil gas. The City of Phoenix provided the results of distribution system sampling for total trihalomethanes (or THMs), including

chloroform and bromodichloromethane, from July 2010 through April 2011 for the three tested locations closest to the OU1 soil gas study area. The results are summarized on Table 6. As described below, Henry's law can be used to verify whether the observed THM concentrations in the potable supply could explain the observed THM concentrations in soil gas.

For chloroform, the maximum predicted soil gas concentration was calculated using the Henry's law constant (dimensionless) for chloroform and the median concentration observed in the municipal distribution system.

Where:  $H = C_{\text{air}} / C_{\text{water}}$

Thus:  $C_{\text{air}} = H * C_{\text{water}}$

Where  $H = 0.15$  (chloroform)

And  $C_{\text{water}} = 43.50 \mu\text{g/L}$

Then  $C_{\text{air}} = 6.53 \mu\text{g/L}$

Expressed in  $\mu\text{g/m}^3$ , the median chloroform concentration observed in the municipal supply system in the vicinity of OU1 soil gas study area could produce  $6,530 \mu\text{g/m}^3$  of chloroform at equilibrium concentrations in soil gas<sup>3</sup>. The median<sup>4</sup> concentrations with the outlier TCE data points removed for the 5 ft bgs and 15 ft bgs data sets were  $69 \mu\text{g/m}^3$  and  $120 \mu\text{g/m}^3$ , respectively<sup>5</sup>. These values are only 1% and 1.8%, respectively, of the calculated equilibrium concentration expected based on the median chloroform concentration observed in the municipal water supply. Thus, it is reasonable to conclude that the observed concentrations of chloroform in soil gas originated from a municipal water source.

Similarly, using the Henry's constant for BDCM (0.13) and the median concentration of BDCM observed in the municipal distribution system ( $23 \mu\text{g/L}$ ) yields a calculated equilibrium BDCM concentration of  $2,990 \mu\text{g/m}^3$  assuming a municipal water supply source. This was compared to the average observed concentrations of BDCM in soil gas, since the median observed concentration of BDCM in soil gas is 0. The average observed BDCM in soil gas at 5 and 15 ft bgs was only 0.66% and 0.54% of the calculated equilibrium concentration based on the median observed BDCM concentration observed in the municipal water supply. Thus, it is reasonable to conclude that observed concentrations of BDCM originated from a municipal water source.

---

<sup>3</sup> The equilibrium concentration resulting from the maximum chloroform concentration observed in the municipal distribution system would be  $15.75 \mu\text{g/L}$  or  $15,750 \mu\text{g/m}^3$

<sup>4</sup> The median concentration for all locations would be  $71 \mu\text{g/m}^3$  and  $130 \mu\text{g/m}^3$  at 5 and 15 ft bgs, respectively

<sup>5</sup> The maximum chloroform soil gas concentration observed was  $3,600 \mu\text{g/m}^3$  and  $5,900 \mu\text{g/m}^3$  at 5 and 15 ft bgs, respectively.

## Conclusion

There is no known chloroform or BDCM source associated with historical operations at the former Motorola 52<sup>nd</sup> Street facility. The observed concentrations of chloroform and BDCM in soil gas have no correlation to the observed concentrations of TCE in soil gas. Moreover, chloroform and BDCM are present in soil gas in areas with no associated groundwater contamination. However, there is a strong correlation between the observed chloroform and BDCM concentrations indicating that chloroform and BDCM originate from a single source – a source other than the source of the TCE. The concentrations of chloroform and BDCM observed in the study area are representative of only a small percentage (less than 2% for chloroform and less than 1% for BDCM) of the estimated equilibrium soil gas concentrations that would be expected from a municipal water supply source based on the median concentrations observed in the municipal distribution system over the last year. Therefore, it is concluded that the likely source of chloroform and BDCM in soil gas is off-gassing from municipal water or wastewater sources.

Data source: July 18, 2011 email from the City of Phoenix Water Services Department to Freescale Semiconductor

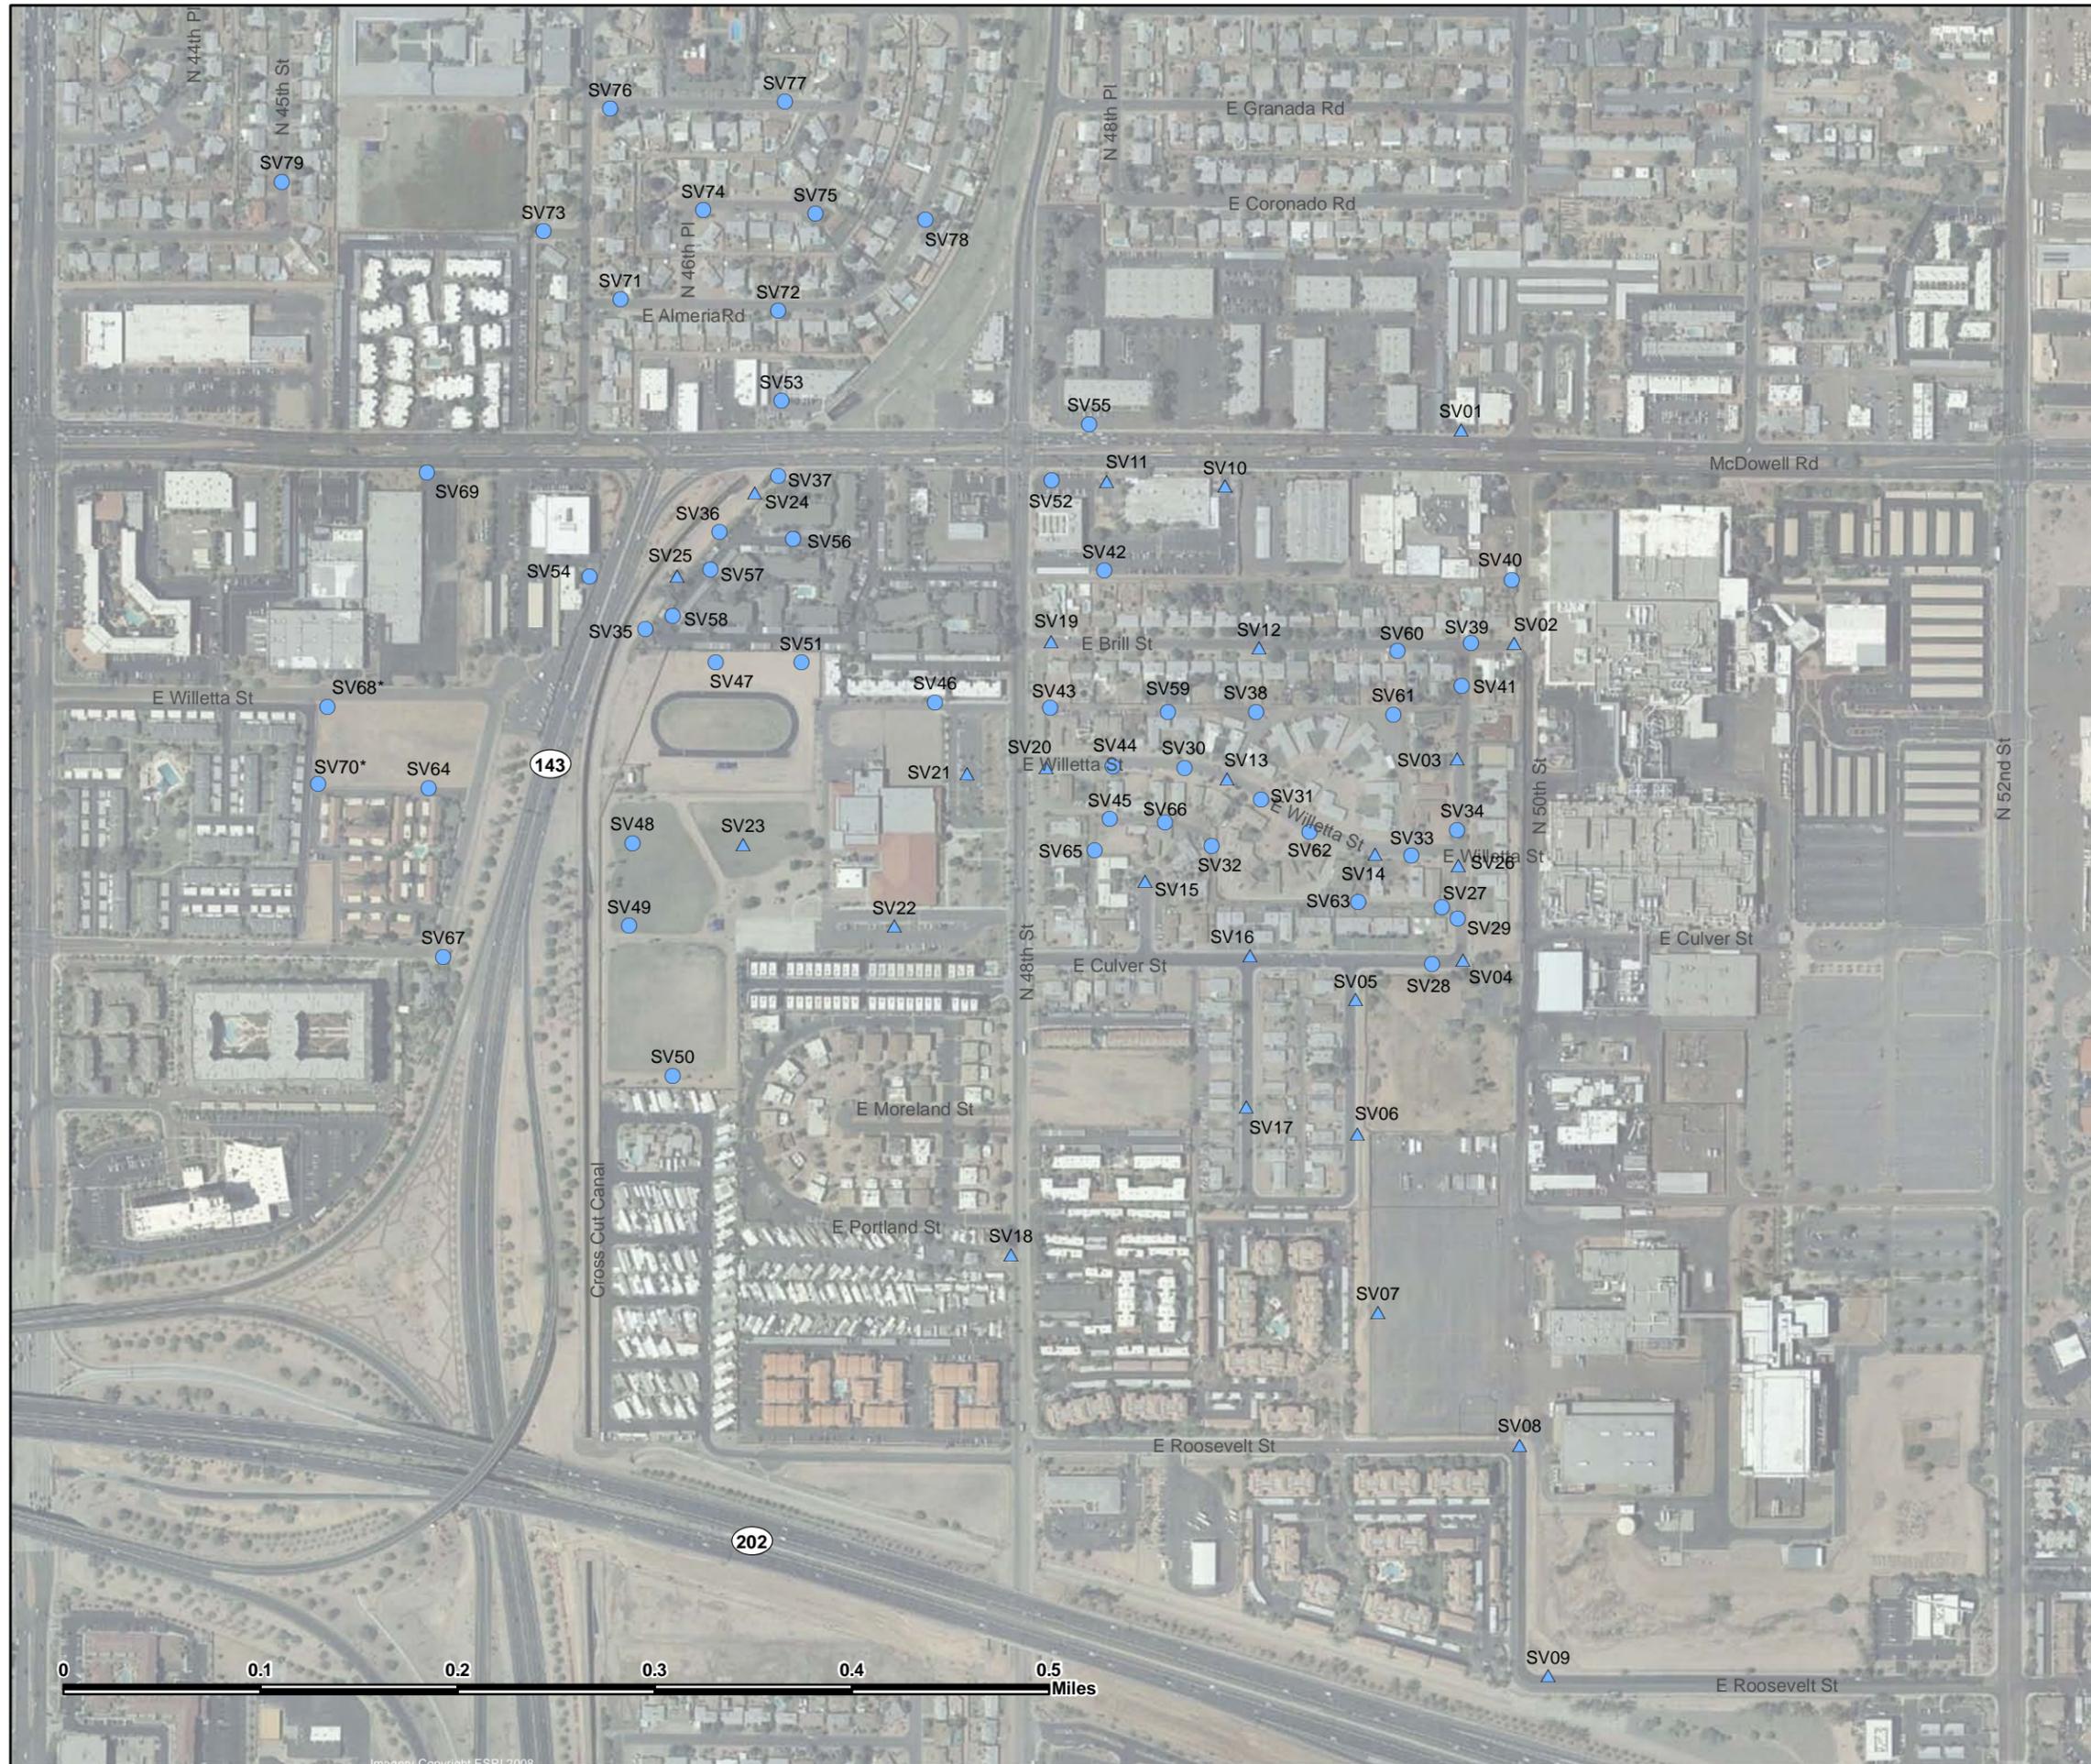

Air Photo Base from Google Earth

Approximate Scale

**Figure 1**  
Study Area Location

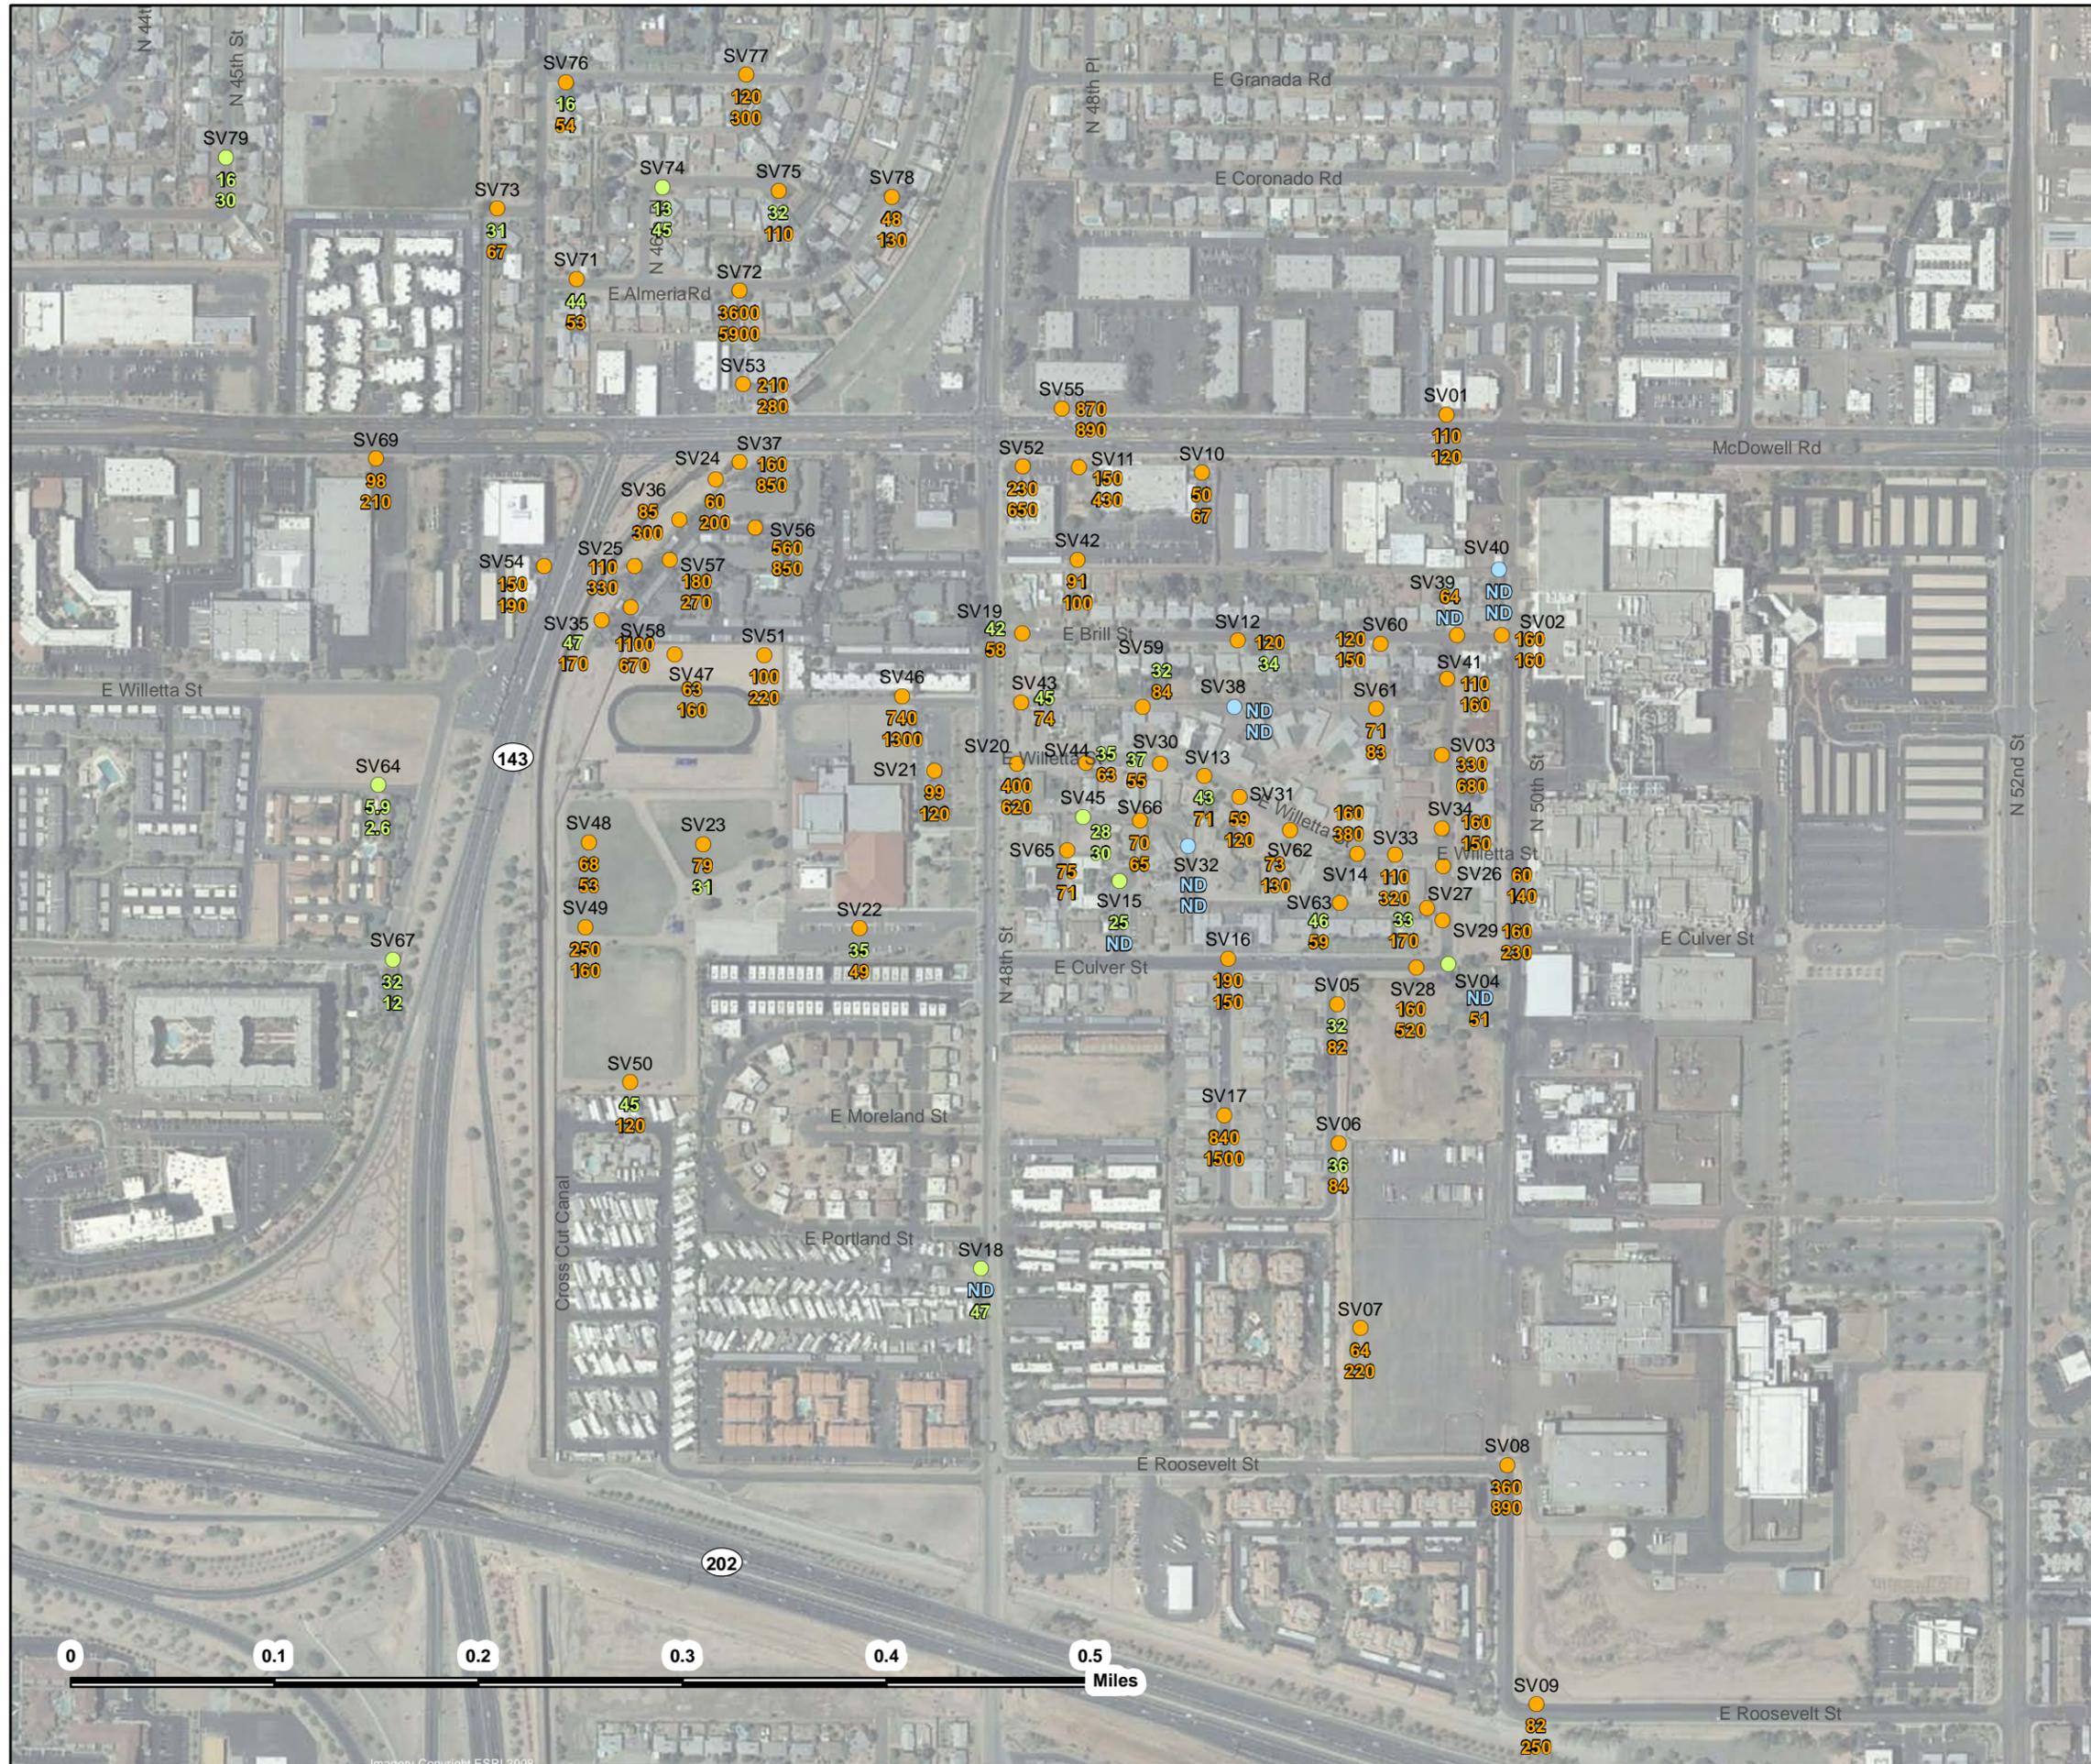

- SV40 Site ID
- ▲ Primary Sample Locations
- Step-out Sample Locations

Note:  
 \* Locations SV68 and SV70 were not sampled

**Figure 2**  
 OU1 Soil Gas Sample Locations

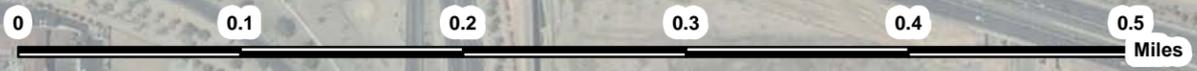

**Color Designation Based on Maximum Detection for Each Location Posted**

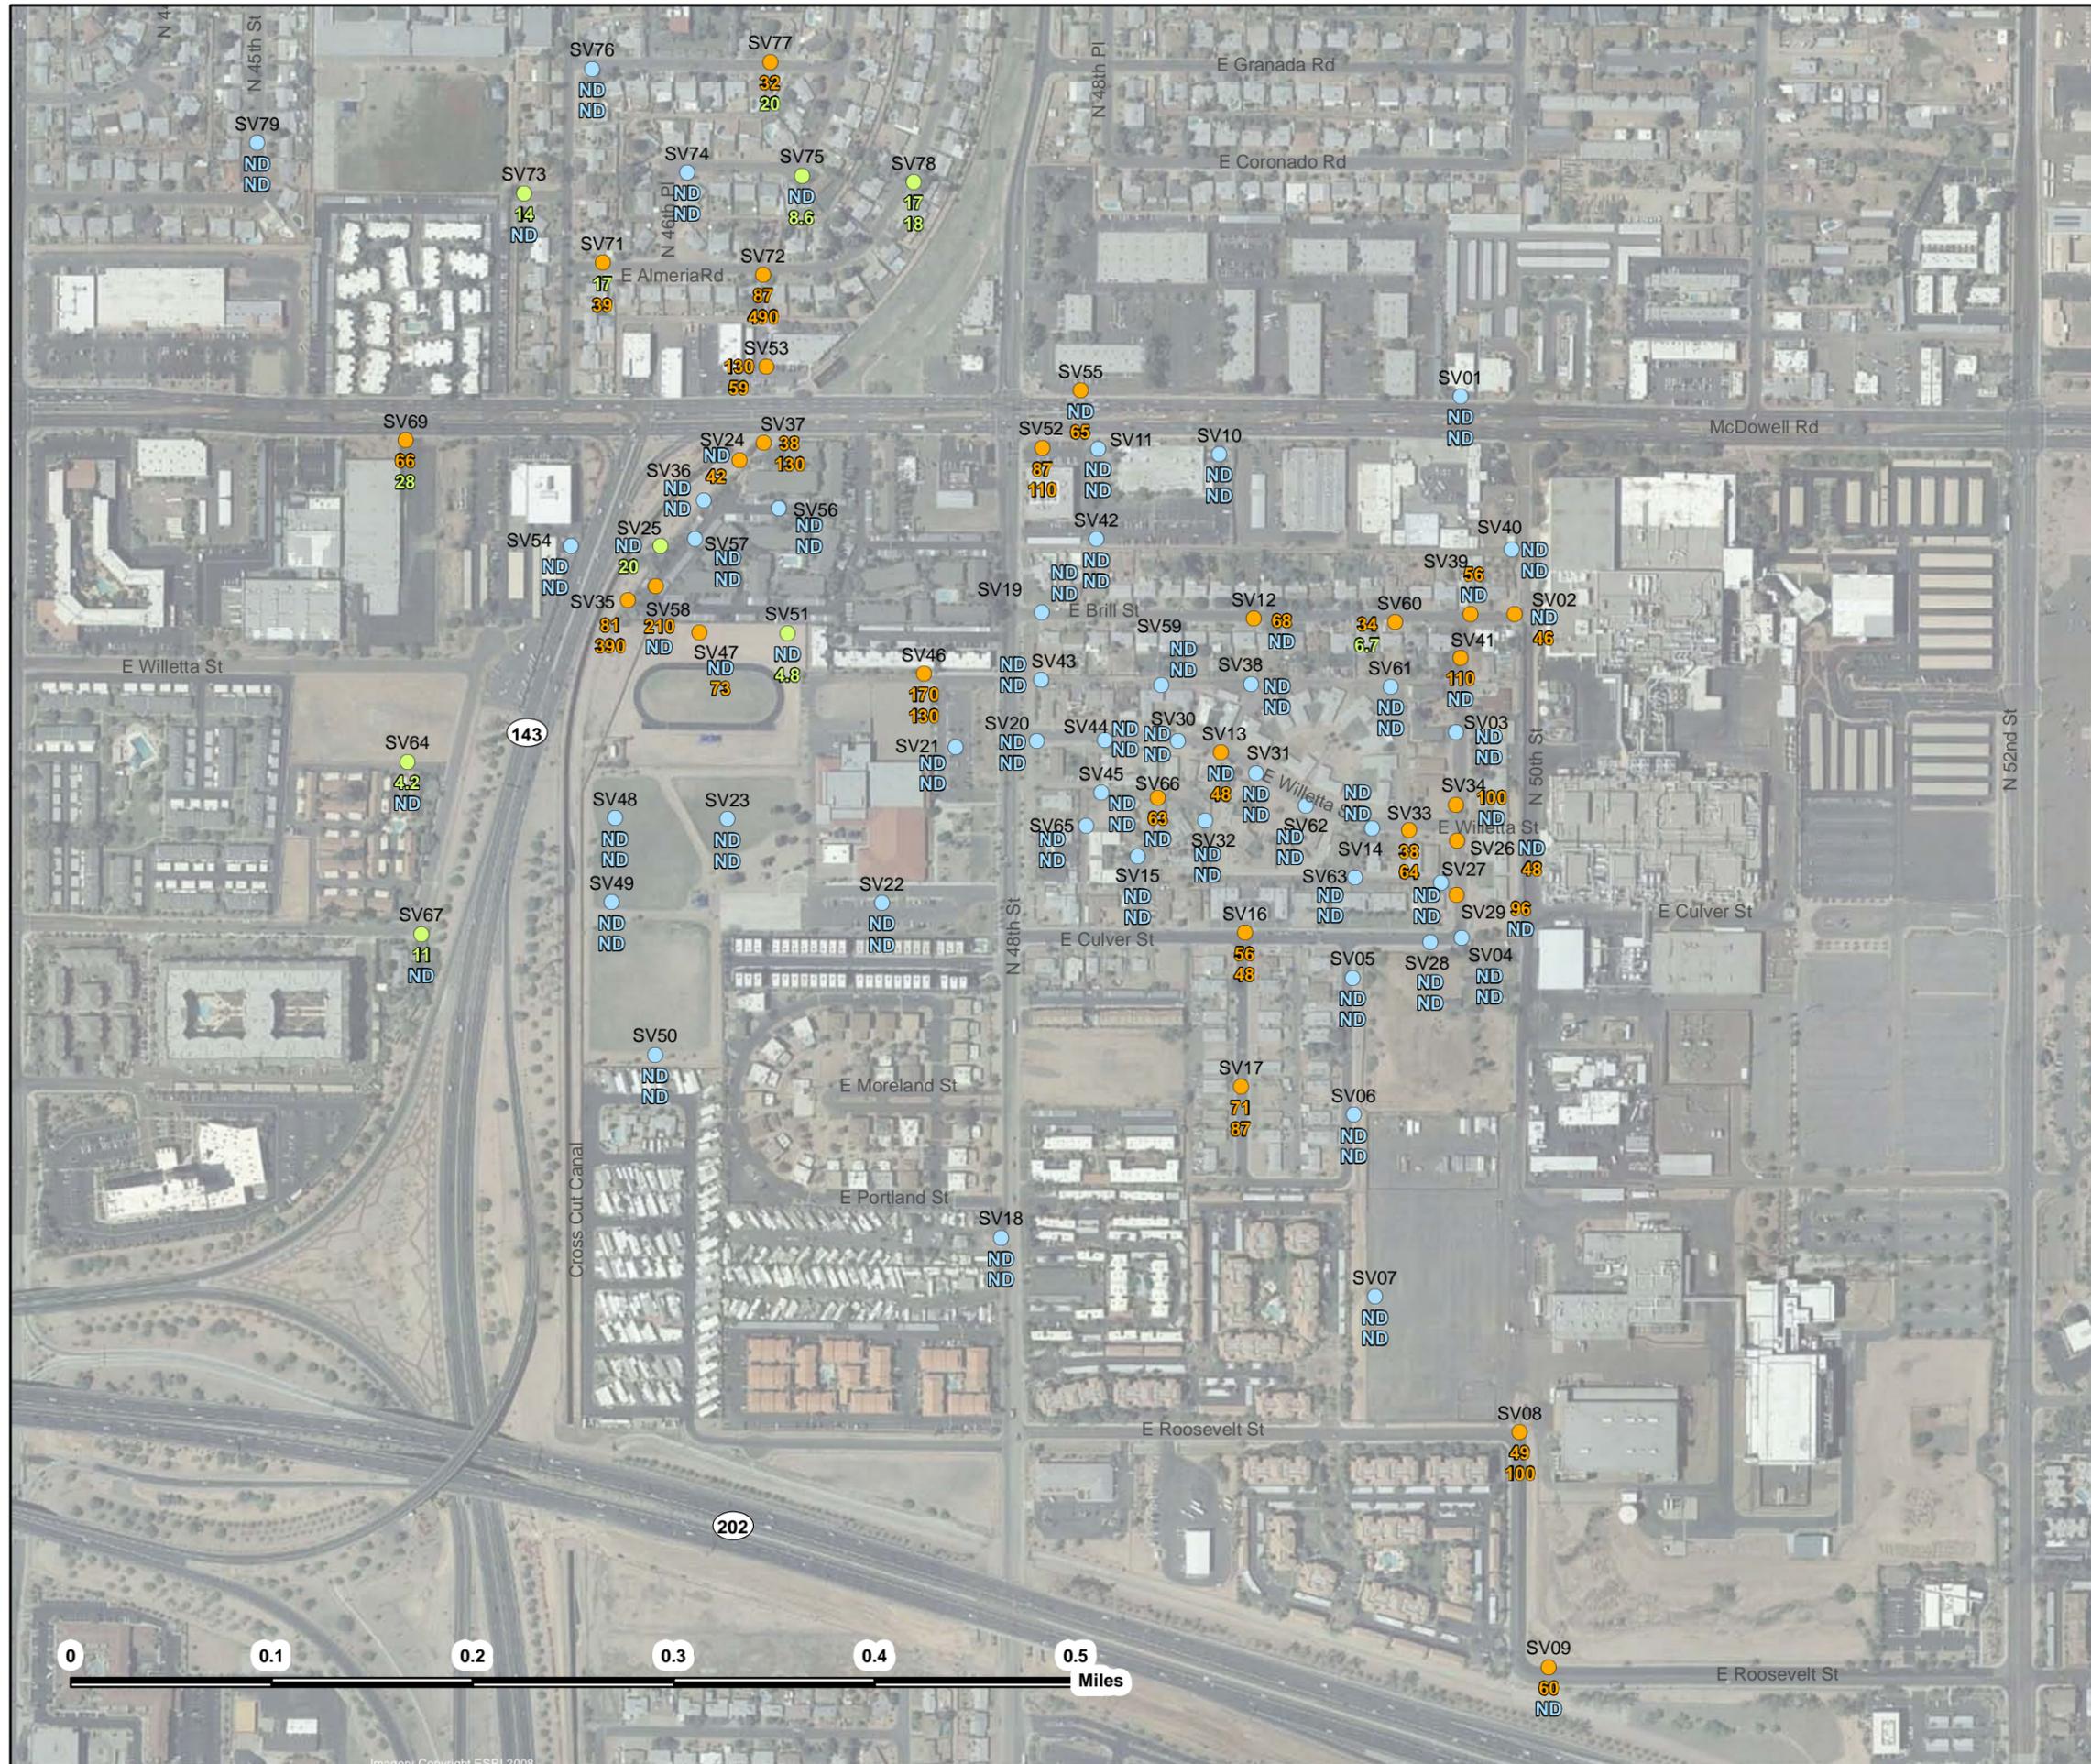

- Chloroform Not Detected
  - Chloroform Detected Below Residential SGHSL
  - Chloroform Detected at or Above Residential SGHSL
- SV13** Site ID  
● Sample Location  
43 Chloroform Concentration at 5 foot Interval Below Ground Surface  
71 Chloroform Concentration at 15 foot Interval Below Ground Surface

- Notes:
- 1) Sample location symbol color is determined by highest analytical result reported in either 5 foot or 15 foot sample
  - 2) Validated results shown with numeric value and color coded number
  - 3) ND = Not Detected
  - 4)  $\mu\text{g}/\text{m}^3$  = micrograms per cubic meter
  - 5) SGHSL = Soil Gas Human Health Screening Level
  - 6) Residential Chloroform SGHSL =  $48 \mu\text{g}/\text{m}^3$ , Commercial Chloroform SGHSL =  $440 \mu\text{g}/\text{m}^3$
  - 7) SV68 and SV70 locations are not shown; these were contingent locations that will not be sampled

**Figure 3**  
 OU1 Chloroform Soil Vapor Results ( $\mu\text{g}/\text{m}^3$ )  
 5 Foot and 15 Foot Intervals  
 Below Ground Surface

**Color Designation Based on Maximum Detection for Each Location Posted**

- Bromodichloromethane Not Detected
- Bromodichloromethane Detected Below Residential SGHSL
- Bromodichloromethane Detected at or Above Residential SGHSL

- SV16** Site ID
- Sample Location
  - 56 Bromodichloromethane Concentration at 5 foot Interval Below Ground Surface
  - 48 Bromodichloromethane Concentration at 15 foot Interval Below Ground Surface

- Notes:
- 1) Sample location symbol color is determined by highest analytical result reported in either 5 foot or 15 foot sample
  - 2) Validated results shown with numeric value and color coded number
  - 3) ND = Not Detected
  - 4)  $\mu\text{g}/\text{m}^3$  = micrograms per cubic meter
  - 5) SGHSL = Soil Gas Human Health Screening Level
  - 6) Residential Bromodichloromethane SGHSL =  $29 \mu\text{g}/\text{m}^3$ , Commercial Bromodichloromethane SGHSL =  $280 \mu\text{g}/\text{m}^3$
  - 7) SV68 and SV70 locations are not shown; these were contingent locations that will not be sampled
