*RE: Revisions to Sampling Locations
790 East Duane Avenue
Offsite Operable Unit, Sunnyvale, California*

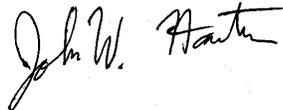

Dear Ms. Morash:

As requested, Locus has evaluated sampling and survey data from the recent investigations at 790 East Duane Avenue, to determine if changes in the sampling work plan are warranted. In order to provide more detailed information on the indoor air quality in these buildings, Locus proposes to collect air samples from locations shown on the attached figure. These sampling locations replace our earlier transmittal of sampling locations for this property (submitted on 20 January 2015).

The new sampling locations will be used for at least one sampling event, after which we will determine whether continued sample collection from these locations would provide useful information for evaluating vapor intrusion potential. The sampling locations may be further revised based on the results from the next round of sampling.

If you have any questions regarding this correspondence, please call me at (415) 799-9937.

Sincerely,

J. Wesley Hawthorne
Senior Vice President

JWH/mmm
