

# Protecting the Public

The Navy has several on-site controls and procedures in place at Hunters Point Naval Shipyard (HPNS) to ensure public safety.

### Establishing Radiologically Controlled Areas

Public access to all work areas is restricted and only specially trained personnel are permitted to access radiological controlled work areas

### Utilization of a Portal Monitor to Screen Trucks for Radiation

Trucks entering and leaving HPNS must pass through a portal monitor which screens for radiation

### Conducting Air Monitoring

The Navy monitors for both particulates and radiological contamination with on-site air monitors

### Implementation of Dust Control Measures

Dust is controlled to contain contamination within the restricted areas

### Comprehensive Evaluation

The Navy follows a carefully designed plan at HPNS that ensures effective cleanup in a time-sensitive manner with public safety as a priority.

The California Department of Public Health collects its own confirmation samples from radiological cleanup sites for independent verification.

Multiple agencies participate in the radiological investigations and remediation at HPNS.
