

LEGEND

- △ Monitoring Wells Sampled For Perchlorate
- ▲ Production Wells Sampled For Perchlorate
- Operable Unit Extraction Wells
- Operable Unit Treatment Plant
- - - Municipal Boundary
- ⬡ Approximate Boundary of Investigation Area for the San Fernando Valley Superfund Site

Perchlorate Concentration

- Light Green: 1 - 6 µg/L
- Medium Green: 6 - 30 µg/L
- Dark Green: Above 30 µg/L

DRAFT

NOTES:

1. The areas of contamination shown on this map represent generalized two-dimensional approximations based on water quality analysis from RI monitoring wells, facility wells, and production wells where the top of screened interval is within 50 feet of the water table.
2. Due to the possible vertical zonation of contamination, a well within an identified area of contamination may produce water with contamination different than that indicated on this map.
3. Areas of contamination are based on the most recent record available for wells sampled between January 2006 and July 2011.
4. Areas outside the colored areas of contamination represented on this map may also be contaminated. However, the most recent data available from wells located outside the colored areas of contamination are below the detection limit.
5. The original figure is produced in color. Significant information is lost if copied in black and white.
