Mountain View Mobile Home Estates 2010 Five Year Review

Appendix C Public Notice of Five Year Review, April 2010

PUBLIC NOTICE
THE UNITED STATES ENVIRONMENTAL PROTECTION AGENCY BEGINS THE FOURTH FIVE-YEAR REVIEW OF CLEANUP AT THE MOUNTAIN VIEW MOBILE HOME ESTATES SUPERFUND SITE

The United States Environmental Protection Agency (EPA) has begun the fourth five-year review of cleanup actions undertaken at the Mountain View Mobile Home Estates Superfund Site, in Globe, Arizona. The review will evaluate whether the cleanup actions for the Site remain protective of human health and the environment.

THE REVIEW PROCESS
When EPA's cleanup remedy leaves some waste in place, the Superfund law requires an evaluation of the protectiveness of remedial systems every five years, until the Site has been cleaned up sufficiently to allow unrestricted access. The purpose of the five-year review is to understand how the constructed remedy is operating and to measure the progress towards achieving the Site's cleanup objectives.

Specifically, EPA will look at the containment of the buried asbestos, the integrity and maintenance of the cap covering the buried asbestos, the application and monitoring of legal documents regarding property restrictions, and the integrity of fencing and barriers. The EPA project manager will talk with the Arizona Department of Environmental Quality (ADEQ) on-site manager, other regulatory authorities, EPA's scientific experts, and interested members of the public.

A copy of the final report will be placed in the information repository and a notice will appear in the local paper announcing the completion of the Five-Year Review Report.

SITE HISTORY
The Mountain View Mobile Home Estates Site was formerly used for milling of asbestos and then for a residential mobile home community. The Site was placed on the National Priorities List (NPL) in 1983 to address health risks posed by the exposed asbestos tailings on the property. In 1983, EPA selected a remedy which included the permanent relocation of the mobile home residents, the demolishing and burying on-site of the homes and other structures, covering the asbestos contaminated soils, fencing and deed restrictions.

COMMUNITY INVOLVEMENT
If you have any issues or concerns about the operation and maintenance of remedy at the Mountain View Mobile Home Estates Superfund Site cleanup, EPA would like to talk with you. Please contact Andria Benner, EPA Remedial Project Manager, at the number below.

Freeport-McMoRan continues to invest in the future of Miami by restarting mining, performing large-scale reclamation work, and by funding construction of a state-of-the-art wastewater treatment facility.

Mining resumed in December

About 120 employees have been hired to date for the resumption of mining. The workforce is planned to increase by about 80 new workers by the fourth quarter this year. Two electric shovels have been assembled on site and are in service, while a hydraulic shovel is scheduled to be operational in July. Fourteen trucks are now in service, and the final fleet will be 24 trucks. As a result of new mining, copper production will increase from an annual rate of about 20 million pounds from leaching residual copper in stockpiles, to an annual rate of about 100 million pounds by the second half of 2011.

Reclamation continues

In addition, an important part of the mining process is to remove material covering copper ore at the mine – material that can be used as cover for reclamation capping of old tailings.

Wastewater plant nears completion

A new wastewater treatment plant for the Town of Miami – funded by Freeport-McMoRan at a cost of $5 million – is scheduled to come on line in the fourth quarter this year. It will replace old evaporative ponds atop tailings impoundments.
