Subject: Response to comments re radiation hazards

Dear Mr. Edward Hanlon of the EPA,

My concern does not seem to be reflected by the reports/comments I've read thus far. What increased risks/high counts might occur due to a hurricane, earthquake, tsunami, El Nino storm? I feel these natural disasters are sufficiently realistic/common that studies and subsequent regulations must take them into account. We are equally susceptible to damage as much of the rest of the world. Please insist that your conclusions take into account these possible natural disasters throughout the country as well as possible "fallout" from radiation abroad due to other probable causes.
