RAC should point to concrete ways EPA can combat the “magical thinking” that believes dose estimation is much more reliable than it actually is. This belief remains steadfast—even if radiation-associated diseases increase in a population, unreliable dose estimates are used to claim radiation is not responsible. These dose estimations have often been based on averaged radiation releases measured by industry. Measurement of these releases has been fraught with secrecy and improper measurement technique, resulting in unrealistic exposure scenarios that are then relied upon for health impact assessments. Radiation kills.

Kagiso,

Max

"The master class has always declared the wars; the subject class has always fought the battles. The master class has had all to gain and nothing to lose, while the subject class has had nothing to gain and everything to lose--especially their lives." Eugene Victor Debs
