Subject: revision of standards for radiation exposure

Dear Mr. Hanlon,

I'm writing to implore you to exercise maximum caution in any revision of the standards for radiation exposure.

The ICRP recommendations seem far too lax, especially in protecting the unborn and the young, who are most vulnerable to radiation's effects.

Please, we need to make sure that future generations do not suffer from the laxity of our current standards. It isn't just a question of cancers or other health effects in the living, but of irreversible genetic damage that will continue to haunt humanity in the future.

Thank you for your attention.

Sincerely,

Steve Roddy
San Francisco, CA 94118
