Subject: Radiation Exposure Standards

It is good news that after nearly 40 years, EPA is considering updating its radiation exposure standards for regularly operating nuclear facilities. Human health, not the financial health of the nuclear industry, should drive any changes that EPA makes. These standards need to protect humans during their most vulnerable life stage: childhood. Female children are the most vulnerable.

Please count me among those who support the written comments submitted by Beyond Nuclear.

I want a world free of nuclear power and weapons.

Thank you.
