Mr. Hanlan,

Please submit the New York, **Summary Report Human Health Risks and Exposure Pathways of Proposed Horizontal Hydrofracking** from me as part of the public comments section.

In addition if you will may I make one more comment, please? I am a retired firefighter and was selected to be one of the two representatives from my department to be on the Western Wayne County Hazardous Incident Response Team. This is the bases for my environmental concern with this process. Public safety has been the main focus of my life for the last 32 years and feel that this process presents a clear and present danger to the over all health and safety of the public. With out genuine guarantees that all of the waste water can be safely recovered, not just 40 or 60 percent and there is no migration of the chemicals used or methane into the ground water supplies this process is inherently unsafe.

In addition I did receive your e-mail with all of the pertinent web information for the meetings tomorrow and Wednesday.

Thank you again,

Jim Egged

The report is available at this web address.
