

**SUPPLEMENTAL INFORMATION PROVIDED BY EPA TO  
SAB/RAC FOR PUBLIC DISCUSSION ON NOVEMBER 28 &  
DECEMBER 18, 2006**

**Table: Comparison of the white paper (WP) and BEIR VII method for combining  
EAR and ERR LAR projections for lung cancer incidence.<sup>1</sup>**

	Combination Method RR weight <sup>2</sup> = 0.3		Combination Method RR weight = 0.5		Combination Method RR weight = 0.7	
	WP	BEIR VII	WP	BEIR VII	WP	BEIR VII
Sex						
Male	186	193	195	203	206	213
Female	401	428	460	495	541	573

NOTE: Number of cases per 100,000 persons exposed to 0.1 Gy. Results do not incorporate DDREF adjustment.

<sup>1</sup>Results are shown for stationary populations and SEER incidence data for the years 1998-2002.

<sup>2</sup>Weight for projection based on the relative risk model.
