Subject: Re: Wetzel Co WV contamination

We have a growing team of volunteer scientists who are well respected in their careers who are able to provide proof that frac drilling is contaminating the drinking water here. The flaring is contaminating the air and people are so desperate as their homes and lives are endangered. They ask me how it can be ok for companies to destroy communities and what can they do to protect the EPA to protect their families? What can I tell them the EPA can do to protect them? Marilyn Hunt
