

Comments on 2/27/17 SAB draft

Jean Chruscicki Region 5 EPA

P. 2 footnote should read – Bloom biomass no more than that observed in 2004 or 2012

P. 11 same error in same footnote, different page

p. 17 how reasonable/common is it to embed a Cladophora model in WLEEM model?

P. 25 line 24, “for pollutants that tend to increase in concentration as flow increases (like TP in the Maumee River)...” Is this statement in parens correct?

P. 26 line 9 which are monitored using stratified sampling programs?

p. 27 line 13, regarding uncertainty in the values derived from the assessment approaches, should we mention that there has been uncertainty addressed in this project in the second phase and resultant documentation?
